

EVERGAME 360 NFL Frame™

API & Token Quick Reference Card

TOKEN TYPES & PREFIXES

Token Type	Prefix	TTL	Purpose	Example
Simulator	EGS_	30 days	Simulation operations	EGS_eyJhbGciOiJSUz-I1NiI...
Dashboard	EGD_	1 hour	Dashboard access	EGD_eyJhbGciOiJSUz-I1NiI...
Integration	EGI_	1 year	Vendor integration	EGI_eyJhbGciOiJSUz-I1NiI...
Master	EGM_	24 hours	Admin access	EGM_eyJhbGciOiJSUz-I1NiI...
Session	EGT_	15 mins	Temporary ops	EGT_eyJhbGciOiJSUz-I1NiI...

QUICK START

1. Generate Token

```
python generate_token.py --type simulator --save
```

2. Set Environment

```
export EVERGAME360_TOKEN="EGS_your_token_here"
```

3. Test Connection

```
curl -H "Authorization: Bearer $EVERGAME360_TOKEN" \  
https://api.evergame360.nfl/api/v1/health
```

KEY API ENDPOINTS

Authentication

POST /api/v1/auth/token	# Get access token
POST /api/v1/auth/refresh	# Refresh token

POST /api/v1/frame/key # Get Frame Key

Simulation Control

POST /api/v1/simulator/initialize # Start simulation
POST /api/v1/simulator/{id}/run # Run simulation
GET /api/v1/simulator/{id}/state # Check status
POST /api/v1/simulator/{id}/pause # Pause simulation
POST /api/v1/simulator/{id}/events # Inject event
GET /api/v1/simulator/{id}/results # Get results

Data Access

GET /api/v1/league/state # League status
GET /api/v1/clubs/{id}/compliance # Club metrics
GET /api/v1/games/{id}/orchestration # Game data
POST /api/v1/analytics/predict # Predictions
POST /api/v1/policies/validate # Validate compliance

Dashboard

GET /api/v1/dashboard/executive # Executive view
GET /api/v1/dashboard/operations # Operations view
GET /api/v1/dashboard/compliance # Compliance view
GET /api/v1/dashboard/competition # Competition view

Webhooks

```
POST /api/v1/webhooks/subscribe      # Subscribe to events
GET  /api/v1/webhooks/list           # List subscriptions
DELETE /api/v1/webhooks/{id}         # Unsubscribe
```

AUTHENTICATION HEADERS

Required Headers

```
Authorization: Bearer YOUR_TOKEN_HERE
Content-Type: application/json
X-Frame-Version: 1.0.0
```

Optional Headers

```
X-Simulator-ID: SIM_NFL_2025_001
X-Frame-Key-Hash: abc123def456
X-Request-ID: uuid-for-tracking
```

CODE SNIPPETS

Python

```
import requests

headers = {
    'Authorization': f'Bearer {token}',
    'Content-Type': 'application/json'
}

response = requests.post(
    'https://api.evergame360.nfl/api/v1/simulator/initialize',
    headers=headers,
    json={'scenario': 'game_day'}
)
```

JavaScript

```
const response = await fetch(
    'https://api.evergame360.nfl/api/v1/simulator/initialize',
    {
        method: 'POST',
        headers: {
            'Authorization': `Bearer ${token}`,
            'Content-Type': 'application/json'
        },
        body: JSON.stringify({scenario: 'game_day'})
    }
);
```

cURL

```
curl -X POST https://api.evergame360.nfl/api/v1/simulator/initialize \
-H "Authorization: Bearer $TOKEN" \
-H "Content-Type: application/json" \
-d '{"scenario": "game_day"}'
```

SIMULATION SCENARIOS

Scenario	Duration	Entities	Acceleration	Use Case
game_day	6 hours	1 game	10x	Single game simulation
full_season	5 months	All clubs	100x	Season prediction
emergency	2 hours	1 venue	1x	Emergency response
playoff	1 month	14 clubs	50x	Playoff bracket
training	1 week	1 club	20x	Training scenarios

COMMON OPERATIONS

Initialize & Run Game Simulation

```
# 1. Initialize
sim_response = api.post('/simulator/initialize', {
    'scenario': 'game_day',
    'game_id': '2025_REG_W12_KC_BUF'
})
sim_id = sim_response['simulation_id']

# 2. Run
api.post(f'/simulator/{sim_id}/run', {
    'duration': '6h'
})

# 3. Get Results
results = api.get(f'/simulator/{sim_id}/results')
```

Subscribe to Events

```
api.post('/webhooks/subscribe', {
    'endpoint_url': 'https://your-server.com/webhook',
    'events': ['compliance.violation', 'emergency.detected'],
    'filters': {'severity': '>=5'}
})
```

Query Compliance

```
compliance = api.get('/clubs/KC_CHIEFS/compliance')
if compliance['score'] < 0.95:
    api.post('/simulator/events', {
        'event_type': 'compliance_intervention',
        'entity': 'KC_CHIEFS'
    })
```

RATE LIMITS

Token Type	Requests/Hour	Burst	Concurrent	WebSockets
Simulator	10,000	100	5 sims	10
Dashboard	1,000	20	1	1
Integration	50,000	500	N/A	100
Master	Unlimited	1000	N/A	Unlimited

ERROR CODES

Code	Meaning	Action
AUTH001	Invalid token	Check token format

AUTH002	Token expired	Refresh token
AUTH003	Insufficient permissions	Check token scope
VAL001	Invalid parameters	Check request body
RATE001	Rate limit exceeded	Wait and retry
SYS001	Frame sync failed	Retry with backoff

TROUBLESHOOTING

Token Issues

```
# Verify token
python generate_token.py --verify YOUR_TOKEN

# Generate new token
python generate_token.py --type simulator --ttl-days 90
```

Connection Issues

```
# Test API health
curl https://api.evergame360.nfl/api/v1/health

# Check with verbose output
curl -v -H "Authorization: Bearer $TOKEN" \
    https://api.evergame360.nfl/api/v1/league/state
```

Debug Headers

```
response.headers['X-RateLimit-Remaining'] # Check rate limit
response.headers['X-Request-ID']          # For support tickets
response.headers['X-Frame-Version']       # API version
```

EXAMPLE: COMPLETE SIMULATION FLOW

```
# Complete simulation workflow
import asyncio
from evergame360 import FrameAPI, Simulator

async def run_simulation():
    # 1. Setup
```

```

api = FrameAPI(token='EGS_...', environment='simulator')
sim = Simulator(api)

# 2. Initialize
config = {
    'scenario': 'game_day',
    'game_id': '2025_REG_W12_KC_BUF',
    'acceleration': 10
}
sim_id = await sim.initialize(config)

# 3. Subscribe to events
sim.on('compliance.alert', lambda e: print(f"Alert: {e}"))
sim.on('game.milestone', lambda e: print(f"Milestone: {e}"))

# 4. Run
await sim.run('6h')

# 5. Get results
results = await sim.get_results()
report = await sim.generate_report('executive_summary')

print(f"Simulation complete: {report['url']}")
return results

# Execute
results = asyncio.run(run_simulation())

---
```

QUICK COMMANDS

```

# Generate all tokens
python generate_token.py --type all --save --export-keys
```

```
# Run test simulation
python simulator.py --scenario game_day --test

# Monitor simulation
watch -n 5 'curl -s -H "Authorization: Bearer $TOKEN" \
  https://api.evergame360.nfl/api/v1/simulator/SIM_001/state | jq'

# Export results
curl -H "Authorization: Bearer $TOKEN" \
  https://api.evergame360.nfl/api/v1/simulator/SIM_001/results \
  > results.json

---
```
