

1 LOVABLE PROMPT

eVenu360 Base Project (Golden Seed)

Purpose

Create the single authoritative eVenu360 base project that represents the Sentrais OS + eVenu standard blueprint.

This project is never client-specific. It is the master that everything else clones from.

◆ PROMPT: BUILD EVENU360 BASE PROJECT

CREATE A NEW PROJECT CALLED: "eVenu360 – Sentrais Base"

THIS PROJECT IS THE AUTHORITATIVE BASE FOR ALL EVENTS, DEMOS, POCs, AND CLIENT DEPLOYMENTS.

DO NOT HARD-CODE CLIENT-SPECIFIC VALUES.

CORE SYSTEM INTENT

This project visualizes the Sentrais OS connected to the eVenu360 event blueprint.

The system must represent:

- 360-degree operational readiness
- Role-governed command views
- Pre-populated event playbooks
- Evidence-backed compliance
- Temporal execution (before, during, after event)
- NIN-mapped operational standards

GLOBAL CONFIGURATION

Define global variables:

- currentRole (Executive, Operator, Auditor, Admin)
- currentEvent
- currentEcosystem
- currentDate (temporal engine)
- brandingConfig (logo, accentColor, clientName)

All pages must react to these variables.

PAGES (FIXED STRUCTURE - DO NOT DEVIATE)

PAGE 1: "360 Overview"

Purpose: Executive and sponsor-facing readiness summary.

Include:

- Event header (name, city, date range)
- Readiness posture card (overall)
- Risk exposure card
- Evidence completeness indicator
- Certification / compliance state banner
- Innovation Defensibility Score (if applicable)
- Temporal countdown (T-180 → T0 → T+90)

Role behavior:

- Executive: KPI-first, read-only
- Operator: drill-down enabled
- Auditor: evidence summaries visible

PAGE 2: "Command Center"

Purpose: Operational control plane.

Include:

- Active workflows and tasks
- SLA timers
- Escalation indicators
- Playbook execution status
- Incident readiness view
- "What's next" panel

Role behavior:

- Operator: full control
- Executive: summary only
- Auditor: visibility, no actions

PAGE 3: "Event Playbooks"

Purpose: Runtime execution of standardized playbooks.

Structure:

- Playbook list (pre-populated)
- Each playbook shows:
- NIN phase mapping
- Stage (Pre-Event, Event-Day, Post-Event)
- Tasks
- Evidence required
- Status

Temporal logic:

- Playbook steps activate/deactivate based on currentDate vs eventDate.

PAGE 4: "Compliance & Evidence"

Purpose: Governance, audit, and certification readiness.

Include:

- Evidence ledger
- Evidence completeness indicator
- Audit exception summary
- Certification state banner
- Export readiness signal

Role behavior:

- Auditor: primary
- Executive: summary
- Operator: actionable gaps only

PAGE 5: "Intelligence"

Purpose: Impressive intelligence layer.

Include:

- Readiness trends
- What changed
- Risk deltas
- Predictive signals (mocked)
- "Recommended next actions"

DATA MODEL (MOCKED)

Seed with realistic mock data:

- One major event
- One venue
- Multiple agencies
- Multiple playbooks
- Mixed readiness states
- At least one blocked evidence item

DESIGN RULES

- Use modular cards
- Reuse components across pages
- No bespoke layouts
- Calm, controlled, operational tone
- Treat this as an ERP/command system, not a marketing site

FINAL REQUIREMENT

This project must feel like a living operational system,
not a static demo.

Label this project as:

"BASE - DO NOT EDIT DIRECTLY"

What this gives you

A single golden source

A demo that already feels "real"

No redesign for every pitch

A platform your team can rally around
