

SENTRAIS

FORGE v3.0

Framework for Orchestration, Resilience & Governance Engine

The Master Strategy & Client Delivery Operating System for NOVATELabs
Mapped to the Sentrais Frame. Sequenced through NIN. Enforced by Evidence.

Classification: **RESTRICTED – Executive Access Only**

Version: 3.0 – Foundation Release

Date: February 8, 2026

Technology: Claude AI | Google Gemini | Google Cloud Platform

TABLE OF CONTENTS

1. Executive Summary
2. Positioning: Strategy, Automation, Platform
3. System Architecture & Sentrais Frame Mapping
4. The 80% Resilience Gate
5. Strategic Playbook Library (15 Disciplines)
6. Embedded AI Agent Architecture (22 Agents)
7. Design Agent: Deloitte Digital-Grade Outputs
8. Embedded Advisory Services Engine
9. Vendor, SLA & Client Engagement Governance
10. Style Guide Engine & Template System
11. Implementation Strategy Engine
12. GCP Technical Architecture

- 13. Security, IP & Risk Exposure Framework
- 14. Competitive Intelligence Module
- 15. Implementation Roadmap
- 16. Appendix: Approval & Version Control

1. Executive Summary

FORGE is the proprietary master strategy and client delivery operating system for NOVATELabs. It replaces fragmented project management, advisory tooling, and governance systems with a single, sequenced intelligence engine that governs every client engagement from contract signature through operational handoff and sustained managed services.

The name reflects purpose. FORGE shapes raw organizational complexity into resilient, operational infrastructure. It does not consult. It builds.

FORGE is mapped to the Sentrais Frame and work-sequenced through the NIN delivery model. It embeds 15 strategic playbooks covering every discipline required to rival McKinsey, Deloitte, BCG, and Accenture in methodology rigor while exceeding them in automation, platform integration, and evidence-based accountability. Twenty-two AI agents are embedded across all identified functions.

FORGE is built to move the client toward their mission while managing every dimension of risk exposure to Sentrais, its models, and its engagements. No client advances to platform models or execution environments until they reach 80% operational resilience as measured by Blueprint360. This is not a recommendation. It is a hard gate.

What FORGE Replaces

SIPE v1.0 was an internal intelligence engine focused on churn prevention and delivery team optimization. FORGE absorbs that capability and extends it to become the complete client delivery and master strategy system. It absorbs CTO, CIO, and CISO advisory services, vendor partner contract governance, SLA management, financial tracking, competitive intelligence, Deloitte-grade design production, and strategic advisory into a unified platform. The name FORGE is internal only; it is never referenced to clients.

Design Principles

- 1. Sentrais Governs. NOVATELabs Executes.** All strategic authority flows from Sentrais Corporation. FORGE is the enforcement mechanism within NOVATELabs.
- 2. Blueprint360 is the Entry Point.** No execution environment deploys without a validated maturity baseline.
- 3. 80% Resilience Before Models.** Clients must reach 80% operational resilience across all five Blueprint360 dimensions before any platform models, AI systems, or execution environments are activated.

4. Evidence Ledger is the Moat. Every decision, deliverable, and milestone is recorded immutably. The Evidence Ledger compounds defensibility across engagements.

5. Methodology is Embedded, Not Referenced. Playbooks are active system components with enforcement agents, not PDFs on a shelf.

6. Deloitte-Grade Outputs, System-Grade Speed. Every client deliverable meets or exceeds the visual and analytical quality of top-tier strategy firms, produced at platform velocity.

7. Style is Configurable, Structure is Not. Templates and brand presentation can change per engagement. Governance structure is fixed.

8. Protect Sentrais at Every Gate. Risk exposure to Sentrais models, IP, reputation, and commercial position is evaluated at every stage gate before advancing.

2. Positioning: Strategy, Automation, Platform

Sentrais operates as a blended strategy, automation, and platform firm focused on resilience and innovation. This is not a traditional consulting model. It is not a pure SaaS model. It is a new category: Enterprise Orchestration Infrastructure delivered through a methodology-wrapped operating system.

2.1 How Sentrais Rivals Traditional Strategy Firms

Dimension	Traditional Firms	Sentrais + FORGE
Methodology	Proprietary frameworks delivered through consultants. Knowledge walks out when the team leaves.	Methodology embedded directly in software. NIN + FORGE enforce rigor without dependence on individual practitioners.
Deliverables	PowerPoint decks and PDF reports. High visual quality. Static. Shelf life measured in weeks.	Living deliverables connected to the Evidence Ledger. Deloitte-grade visual quality with real-time data integration. Persistent value.
Accountability	Recommendations delivered. Client responsible for execution. No forensic trail.	Shared accountability scorecards. Evidence Ledger tracks both Sentrais and client commitments. Forensic audit trail.
Pricing	High day rates. Body-shop economics. Revenue tied to headcount.	Platform licensing + services. Revenue compounds through Evidence Ledger stickiness. Non-displaceable.
Risk Management	Risk assessment as a deliverable. No operational enforcement.	80% Resilience Gate enforces readiness before deployment. Risk is managed structurally, not documented.
Continuity	Engagement ends. Knowledge dissipates. Client calls back for next project.	FORGE + Evidence Ledger persist. Managed Services (Sentrais) provides

		ongoing orchestration. Antifragile positioning.
--	--	---

2.2 The Blended Model

Strategy: FORGE embeds McKinsey problem-solving frameworks, Bain RAPID decision models, and Deloitte digital transformation playbooks directly into the NIN lifecycle. Advisory is not separate from delivery; it is a function of the system.

Automation: 22 AI agents automate playbook execution, document generation, risk monitoring, SLA enforcement, and financial tracking. Human judgment governs; machines execute at scale.

Platform: The Sentrais Intelligence OS (EVERGAME, eVenu, CiviGrid, SEARGrid) provides the execution environment. FORGE governs the path to platform activation. Blueprint360 validates readiness. The Evidence Ledger locks the client into the ecosystem.

3. System Architecture & Sentrais Frame Mapping

3.1 Three-Layer Architecture

FORGE operates across three layers mirroring the Hayes 2026 tech stack.

Layer	Function	Technology
Layer 1: Core OS	Data ingestion, readiness scoring, Evidence Ledger, source of truth, version control, financial ledger	GCP BigQuery, Firestore, Cloud Functions, Vertex AI pipelines
Layer 2: Edge Apps	Client dashboards, NIN Analyzer, playbook execution, template rendering, design production engine	GCP Cloud Run, Gemini API, Figma API, React, Framer
Layer 3: NIN Multiplier	Agent orchestration, predictive analytics, self-learning, competitive intelligence, resilience scoring	Claude API, Gemini, Vertex AI, Cloud Workflows, n8n

3.2 Sentrais Frame Mapping

Sentrais Zone	FORGE Module	Responsible Entity
Zone 1: Resilient Reach	IP Protection Engine, Chimera Data Backbone, Evidence Ledger, Sentrais risk exposure management	Sentrais Corporation (governance)
Zone 2: Foundation	R&D playbooks, Blueprint360 POC engine, academic validation, SEAR research protocols	NOVATELabs.org (research)

Zone 3: NOVATELabs.ai	All delivery playbooks, PMO engine, agent orchestration, client delivery, design production, data engineering	NOVATELabs.ai + Meta (execution)
Zone 4: Sentrais	Compliance engine, licensing, SLA governance, vendor contracts, competitive intelligence, financial management	Sentrais Corporation (compliance)

3.3 NIN Work Sequence with Gate Criteria

Phase	Gate Criteria	Time Cap	Resilience Check	Agents Active
1. Discover	Stakeholder map, friction documented, scope boundaries, risk register initiated	2 weeks	Baseline assessment initiated	Discovery, Intake, Comms
2. Diagnose	Blueprint360 score delivered, maturity baseline, gap analysis, Sentrais risk exposure evaluated	4 weeks	Resilience score calculated across all 5 dimensions	Assessment, Risk, Data Eng, Financial
3. Design	Architecture approved, SOW finalized, resource plan confirmed, Go/No-Go gate	4 weeks	80% RESILIENCE GATE: Must pass before platform models activate	Architecture, Legal, Design, Financial
4. Deploy	Execution environment live, integrations validated, acceptance criteria met	Per SOW	Continuous resilience monitoring during deployment	Delivery, QA, Security, Data Eng, Design
5. Debrief	Evidence Ledger finalized, lessons captured, satisfaction scored, transition to managed services	2 weeks	Final resilience score recorded in Evidence Ledger	Learning, Transition, Client Success, Comms

4. The 80% Resilience Gate

STRUCTURAL RULE: No client advances to platform models, AI systems, or execution environments until they achieve 80% operational resilience across all five Blueprint360 dimensions. This gate is non-negotiable and cannot be overridden without CEO authorization and documented risk acceptance.

4.1 What 80% Resilience Means

The 80% threshold represents a composite resilience score derived from the five Blueprint360 maturity dimensions. Each dimension is scored on the Level 1–5 scale. A score of 80% requires an average of Level 4 (Measured) across all dimensions with no single dimension below Level 3 (Operationalized).

Dimension	Minimum Level	What Level 3 Requires	What Level 4 Requires
Governance & Accountability	Level 3	Documented decision rights, defined escalation paths, cross-functional coordination	Evidence-backed decisions, real-time governance dashboards, measured decision velocity
People & Roles	Level 3	Roles defined, training documented, surge capacity identified	Competency metrics tracked, role-specific KPIs, succession planning active
Process & Playbooks	Level 3	Procedures documented, rehearsals conducted, cross-functional execution tested	Process fidelity measured, deviation tracking active, continuous refinement loops
Technology & Systems	Level 3	Systems integrated, basic monitoring, resilience tested under load	Real-time visibility, automated failover, performance benchmarks tracked
Data, Evidence & Assurance	Level 3	Audit trails exist, basic evidence collection, after-action reviews conducted	Immutable audit trail, evidence-backed reporting, continuous learning captured

4.2 Why This Gate Exists

Client Protection: Deploying platform models into immature environments creates failure conditions that damage client operations and erode trust.

Sentrais Risk Management: Every failed deployment creates liability exposure. The Resilience Gate ensures Sentrais only deploys into environments where success probability exceeds acceptable thresholds.

Evidence Ledger Integrity: The Gate creates a documented decision point. If a client cannot reach 80%, the Evidence Ledger records the gap analysis and remediation requirements. This protects Sentrais from scope failure attribution.

Commercial Leverage: Clients below 80% require remediation work before platform activation. This creates additional revenue through advisory and preparation services while ensuring the platform deployment succeeds.

4.3 Gate Override Protocol

In rare circumstances where business conditions require advancement before 80% is achieved, the following override protocol applies:

- CEO (Tye Hayes) must authorize in writing with documented rationale
- Risk exposure assessment completed by CISO (Kirby Winters) and recorded in Evidence Ledger
- Client must sign enhanced risk acceptance addendum to SOW
- Continuous resilience monitoring activated with weekly reporting cadence

- Automatic pause trigger if resilience drops below 60% during deployment

5. Strategic Playbook Library

FORGE contains 15 strategic playbooks organized by discipline. Each playbook is a live system component with embedded AI agents, enforcement logic, and Evidence Ledger integration. Playbooks are not reference documents. They are active execution frameworks that rival and exceed traditional strategy firm methodology.

5.1 Operational Efficiency

Governs resource utilization, throughput optimization, and waste elimination.

- Value stream mapping for every client delivery workflow
- Bottleneck identification with automated escalation protocols
- Capacity planning integrated with engagement forecasting
- Continuous improvement loops feeding the self-learning engine
- Operational KPI dashboards with real-time variance detection

Embedded Agent: *Operations Agent – Monitors burn rates, flags utilization anomalies, recommends rebalancing.*

5.2 Lean Six Sigma

Embeds DMAIC methodology into every process improvement initiative.

- Define phase integrated with NIN Discover outputs
- Measure phase powered by Evidence Ledger data collection
- Analyze phase using Vertex AI statistical process control
- Improve phase with automated recommendation engine
- Control phase enforced through FORGE governance gates

Embedded Agent: *Quality Agent – Tracks sigma levels, identifies variation sources, triggers corrective workflows.*

5.3 Waterfall PMO

Traditional project management for fixed-scope, milestone-driven deliverables.

- WBS generation from SOW scope definitions
- Critical path analysis with automated dependency tracking
- Earned value management integrated with financial reporting
- Formal change control board with approval chains
- Milestone-based payment trigger automation

Embedded Agent: *Waterfall PM Agent – Generates Gantt charts, tracks EVM, enforces change control.*

5.4 Agile PMO

Sprint-based delivery for iterative, adaptive engagements.

- Sprint planning with velocity forecasting from historical data
- Backlog grooming with automated priority scoring
- Daily standup summaries generated from agent check-ins
- Retrospective insights fed into self-learning engine
- SAFe integration for multi-team coordination

Embedded Agent: *Agile PM Agent – Manages sprint boards, calculates velocity, generates burndown analytics.*

5.5 ITIL Service Management

Governs service delivery, incident management, and continuous improvement.

- Service catalog for all Sentrais product offerings
- Incident classification with SLA enforcement
- Problem management with root cause automation
- Change management integrated with FORGE gates
- Service level reporting with breach alerting

Embedded Agent: *ITSM Agent – Classifies incidents, tracks SLA compliance, generates improvement plans.*

5.6 Change Management

Organizational transformation, stakeholder adoption, and resistance management.

- Stakeholder impact assessment aligned with Blueprint360
- Communication planning with persona-specific messaging
- Training needs analysis and curriculum development
- Adoption tracking with leading and lagging indicators
- Resistance identification and mitigation protocols

Embedded Agent: *Change Agent – Maps stakeholder sentiment, generates training plans, tracks adoption.*

5.7 Training & Enablement

Creates and delivers programs for internal teams and client organizations.

- Competency gap analysis from Blueprint360 People dimension
- Role-based learning paths and curriculum design
- Completion and comprehension tracking
- Sentrais product certification pathway management
- Knowledge base creation and maintenance

Embedded Agent: *Training Agent – Generates materials, tracks completion, identifies knowledge gaps.*

5.8 Governance & Compliance

Decision rights, escalation protocols, and regulatory compliance.

- RACI matrix automation for every engagement
- Decision velocity tracking with escalation triggers

- Regulatory mapping (SOC 2, ISO 27001, NIST, HIPAA)
- Audit trail generation from Evidence Ledger
- Board-ready governance reporting

Embedded Agent: *Governance Agent – Enforces approval chains, generates compliance reports, flags violations.*

5.9 Security Operations

Cybersecurity posture, threat management, and security architecture.

- Zero-trust architecture validation
- Vulnerability assessment coordination
- Security incident response playbook activation
- Third-party risk assessment for vendor ecosystems
- Continuous compliance monitoring with evidence collection

Embedded Agent: *Security Agent – Monitors threats, validates controls, generates risk assessments.*

5.10 Portfolio Management

Manages active engagements, resources, and strategic prioritization.

- Portfolio health dashboard with risk scoring
- Resource optimization across concurrent engagements
- Strategic alignment scoring against Sentrais objectives
- Pipeline forecasting with revenue modeling
- Capacity planning for upcoming demands

Embedded Agent: *Portfolio Agent – Balances allocation, scores alignment, forecasts revenue.*

5.11 Business Engineering

Operating models, value architectures, and transformation design.

- Operating model design aligned with Blueprint360 outputs
- Value stream architecture for client processes
- Digital transformation roadmap development
- Technology rationalization and stack optimization
- Cost-benefit analysis with multi-scenario modeling

Embedded Agent: *Business Engineering Agent – Models scenarios, generates transformation roadmaps.*

5.12 Legal: SOW & Contract Governance

All contract preparation, review, negotiation, and lifecycle management.

- SOW template generation from engagement parameters
- Clause library with risk-scored language options
- Contract review automation with deviation flagging
- Pricing validation against approved rate cards
- Amendment and change order workflow management

Embedded Agent: *Legal Agent – Drafts SOW sections, flags non-standard terms, validates pricing.*

5.13 IP Protection

Protects Sentrais IP across all client interactions and partner engagements.

- IP classification framework (Core, Derivative, Client-Specific)
- Deliverable review for inadvertent IP exposure
- Patent and trade secret documentation protocols
- Partner agreement IP boundary enforcement
- Zero-knowledge architecture for sensitive operations

Embedded Agent: *IP Agent – Scans deliverables for exposure, enforces classification, maintains registry.*

5.14 Financial Management

Engagement economics, margin tracking, and revenue operations.

- Engagement P&L tracking with real-time margin visibility
- Revenue recognition automation aligned with milestone payments
- Budget variance detection with early warning triggers
- Rate card enforcement and discount approval workflows
- Quarterly financial review automation with executive reporting

Embedded Agent: *Financial Agent – Tracks margins, flags budget variances, automates invoicing.*

5.15 Data Engineering & Integration

Data pipeline design, quality management, and integration architecture.

- Client data landscape assessment during Discover phase
- ETL pipeline design for platform integration
- Data quality scoring with automated cleansing protocols
- API integration architecture for multi-system environments
- Data governance framework aligned with compliance requirements

Embedded Agent: *Data Engineering Agent – Designs pipelines, monitors quality, manages integrations.*

6. Embedded AI Agent Architecture

FORGE deploys 22 AI agents across every identified function. Agents operate within a three-tier authority model. Tier 1 agents execute autonomously within defined parameters. Tier 2 agents recommend actions requiring human approval. Tier 3 agents provide analysis without execution authority.

Agent	Function	Authority	AI Engine	Scope
Discovery Agent	Stakeholder mapping, friction identification, scope definition	Tier 2	Claude	Engagement
Intake Agent	Document collection, data gathering, initial classification	Tier 1: Auto-process	Gemini	Engagement

Assessment Agent	Blueprint360 scoring, maturity evaluation, gap analysis	Tier 2	Gemini + Claude	Cross-engagement
Risk Agent	Risk register, churn prediction, threat detection, Sentrais exposure analysis	Tier 1: Auto-alert	Vertex AI	Portfolio-wide
Architecture Agent	Solution design, technical validation, integration planning	Tier 3	Claude	Engagement
Legal Agent	SOW drafting, clause review, pricing validation, contract lifecycle	Tier 2	Claude	Contract library
Delivery Agent	Sprint/milestone management, task tracking, milestone enforcement	Tier 1: Auto-update	Claude + Gemini	Engagement
QA Agent	Testing coordination, acceptance criteria validation, defect tracking	Tier 1: Auto-check	Claude	Engagement
Security Agent	Vulnerability monitoring, compliance tracking, threat assessment	Tier 1: Auto-alert	Vertex AI	Organization
Governance Agent	Decision tracking, RACI enforcement, escalation management	Tier 1: Auto-route	Claude	Portfolio-wide
Operations Agent	Resource optimization, utilization tracking, capacity planning	Tier 2	Gemini	Portfolio-wide
Quality Agent	Process control, sigma tracking, improvement identification	Tier 3	Vertex AI	Cross-engagement
Change Agent	Stakeholder sentiment, adoption tracking, resistance mapping	Tier 2	Claude	Engagement
Training Agent	Content generation, gap analysis, certification tracking	Tier 2	Claude + Gemini	Organization
Portfolio Agent	Pipeline forecasting, strategic alignment, resource balancing	Tier 3	Gemini + Vertex AI	Executive
IP Agent	Deliverable scanning, classification enforcement, IP registry	Tier 1: Auto-block	Claude	Organization
Learning Agent	Retrospective analysis, pattern extraction, playbook updates	Tier 3	Vertex AI	Cross-engagement

Transition Agent	Handoff coordination, documentation completion, managed services prep	Tier 2	Claude	Engagement
Design Agent	Deloitte-grade deliverable production, infographics, executive artifacts	Tier 2	Claude + Gemini + Figma	Engagement
Financial Agent	P&L tracking, margin analysis, invoicing, revenue recognition	Tier 1: Auto-track	Gemini	Portfolio-wide
Data Engineering Agent	Pipeline design, ETL, data quality, integration architecture	Tier 2	Claude + Vertex AI	Engagement
Communications Agent	Status reports, executive briefings, stakeholder cadence management	Tier 1: Auto-generate	Claude	Engagement
Client Success Agent	Post-deploy health monitoring, NPS tracking, expansion identification	Tier 2	Claude + Gemini	Portfolio-wide
Competitive Intelligence Agent	Market tracking, pricing benchmarking, positioning analysis	Tier 3	Gemini + web search	Executive

7. Design Agent: Deloitte Digital-Grade Outputs

The Design Agent is a Tier 2 agent responsible for producing every client-facing deliverable at a quality level that matches or exceeds Deloitte Digital, McKinsey, and BCG visual standards. This is not a formatting tool. It is a production system that understands information hierarchy, executive communication patterns, and brand architecture.

7.1 Output Categories

Category	Deliverables	Quality Standard
Executive Reports	Blueprint360 Close-Out Reports, maturity assessments, strategic recommendations, board packages	Structured narrative with data visualization. Clean typography. Insight-led, not data-led. No more than 3 key findings per section.
Scorecards & Heatmaps	Maturity scorecards, risk heatmaps, portfolio dashboards, SLA performance summaries	Color-coded with Sentrais palette. Red/Yellow/Green aligned to Level definitions. Single-page executive view with drill-down capability.

Presentations	Kickoff decks, executive readouts, Go/No-Go packages, quarterly business reviews	Cinematic quality. Isometric illustrations. Minimal text per slide. Speaker notes with talking points. Matches Hayes 2026 visual language.
Infographics	Process flows, architecture diagrams, timeline visualizations, ecosystem maps	Production-grade vector graphics. Blueprint aesthetic. Technical precision with executive clarity.
SOW & Contracts	Statements of work, proposals, pricing schedules, amendment documents	Professional formatting with Sentrais branding. Clean table structures. Section numbering. Print-ready.
Operational Artifacts	Meeting minutes, RACI matrices, risk registers, decision logs, status reports	Standardized templates. Auto-populated from FORGE data. Evidence Ledger integration. No manual formatting.

7.2 Design Production Pipeline

Step 1: Content Assembly. The relevant playbook agent generates structured content (findings, data, recommendations) and outputs as JSON.

Step 2: Template Selection. The Design Agent selects the appropriate template from the FORGE template library based on deliverable type and client style configuration.

Step 3: Visual Rendering. Claude generates document structure and copy. Gemini handles data visualization. Figma API produces vector graphics and diagrams where required.

Step 4: Quality Review. Automated quality check against brand standards, information hierarchy rules, and accessibility requirements.

Step 5: Human Review. Engagement Lead reviews and approves. Modifications route back through the pipeline. Final version commits to Evidence Ledger.

7.3 Why This Matters Competitively

Traditional strategy firms charge \$300–\$600 per hour partly because their deliverable quality justifies premium positioning. If Sentrais produces deliverables that look like they came from McKinsey but are generated at platform speed, the commercial narrative shifts from hourly competition to system-grade capability. The Design Agent is not cosmetic. It is a competitive weapon.

8. Embedded Advisory Services Engine

FORGE embeds fractional CTO, CIO, and CISO advisory directly into the delivery platform. Advisory activates based on engagement type, client maturity, and identified gaps.

Role	Scope	Activation Trigger	FORGE Integration
------	-------	--------------------	-------------------

Fractional CTO	Technology strategy, architecture decisions, vendor selection, build-vs-buy	Blueprint360 Technology dimension below Level 3	Architecture Agent generates recommendations; CTO validates and presents
Fractional CIO	IT governance, digital transformation, data strategy, integration	Governance dimension below Level 3 or multi-system integration required	Governance Agent monitors; CIO sets strategic direction
Fractional CISO	Security posture, compliance, incident response, risk management	Any security subdimension below Level 2	Security Agent provides monitoring; CISO governs architecture

9. Vendor, SLA & Client Engagement Governance

9.1 Vendor Partner Contract Management

Contract Library: MSA, SOW, NDA, DPA, and AI governance exhibits maintained with version control and risk-scored clause options.

SLA Engine: Automated SLA tracking across all vendor commitments with breach alerting, cure period management, and financial impact calculation.

Performance Scoring: Quarterly vendor reviews using standardized scorecards integrated with the Evidence Ledger.

Renewal Intelligence: 90/60/30-day renewal alerts with renegotiation playbook activation.

9.2 Client Engagement Governance

Onboarding Protocol: Standardized client onboarding with NIN Discover phase as the entry point. No engagement bypasses FORGE sequencing.

Communication Cadence: Communications Agent generates weekly status reports, monthly executive summaries, and quarterly business reviews automatically.

Escalation Framework: Three-tier escalation: Engagement Lead (48h resolution), Delivery Director (24h), Executive (immediate). All escalations recorded in Evidence Ledger.

Client Health Scoring: Client Success Agent monitors engagement health with composite scoring across satisfaction, milestone adherence, budget compliance, and relationship strength.

Expansion Intelligence: Automated identification of upsell opportunities based on engagement data, maturity progression, and product-market fit signals.

10. Style Guide Engine & Template System

FORGE includes a configurable style guide engine that controls visual presentation of all templates, playbooks, and deliverables. Style is separated from content architecture, allowing brand customization without structural changes.

Style Layer	Controls	Change Authority
Organization Default	Sentrais palette (Deep Navy, Ocean Blue, Teal, Citrus), typography (Arial), logo, footer format, isometric visual language	CEO or Brand Lead approval
Client Override	Client logo co-branding, accent color overrides, cover customization, watermark, co-branded headers	Engagement Lead within approved boundaries
Deliverable Rules	Document-type formatting (report vs. scorecard vs. SOW), chart palettes, table styles, margin/spacing	Template library managed by FORGE governance

10.1 Rendering Pipeline

Input: Content structure (JSON from playbook agents) + Style tokens (brand configuration) + Template definition (layout schema)

Process: Design Agent assembles, Claude generates narrative, Gemini renders data visualization, Figma API produces vector assets

Output: Final deliverable in docx, pdf, pptx, or html format with full brand compliance

Version Control: Every template version tracked with full change history and rollback capability

11. Implementation Strategy Engine

FORGE prescribes implementation strategies based on four client parameters: desired outcome, target date, available budget, and identified risks. The engine does not offer menus. It prescribes the optimal path. Every prescribed strategy includes the 80% Resilience Gate as a mandatory checkpoint.

Parameter	Low Constraint	Medium	High Constraint
Outcome	Assessment only	Assessment + design prototype	Full production deployment
Timeline	>6 months (standard)	3–6 months (accelerated)	<3 months (critical path)
Budget	\$250K–\$500K (POC)	\$500K–\$1.5M (phased)	\$1.5M+ (full + advisory)
Risk	Low (single system)	Medium (multi-system)	High (cross-agency, live ops)

11.1 Prescribed Models

Model A: Standard Sequencing. Full NIN lifecycle, all five phases in sequence. Waterfall PMO. 6–12 months. Resilience Gate at Design phase exit.

Model B: Accelerated Delivery. Compressed Discover/Diagnose with parallel Design/Deploy. Agile PMO. 3–6 months. Resilience Gate at sprint zero.

Model C: Critical Path. Direct-to-Deploy with embedded risk acceptance. Hybrid PMO with daily governance. 6–12 weeks. CEO override required for Resilience Gate.

Model D: Advisory-Led Transformation. Extended engagement with fractional C-suite embedded. Portfolio management. 12–24 months. Resilience Gate at each quarterly review.

12. GCP Technical Architecture

Component	Service	Purpose
Data Store	BigQuery + Firestore	Evidence Ledger, engagement data, analytics, financial ledger
AI/ML	Vertex AI + Claude API + Gemini API	Agent orchestration, predictions, NLP, design generation
Compute	Cloud Run + Cloud Functions	Serverless agent runtime, event processing
Workflow	Cloud Workflows + n8n	Multi-step automation, cross-system integration
Identity	Cloud IAM + Identity Platform	Zero-trust access, role-based permissions
Storage	Cloud Storage + Nextcloud	Document repository, client portals, template library
Monitoring	Cloud Monitoring + Logging	System health, audit trails, alerting, SLA tracking
Frontend	Cloud Run + Framer + Figma API	Client dashboards, microsites, design production
Design	Figma API + Claude + Gemini	Vector graphics, infographic generation, template rendering

12.1 AI Integration Strategy

Claude AI: Primary engine for document generation, SOW drafting, playbook authoring, advisory content, natural language interaction, and Design Agent narrative production.

Google Gemini: Multimodal analysis, large-scale data processing, data visualization, image analysis of client documentation, and streaming analytics.

Vertex AI: ML pipeline for churn prediction, resource optimization, risk scoring, resilience modeling, and engagement health forecasting.

13. Security, IP & Risk Exposure Framework

13.1 Classification Levels

Level	Content	Access
RESTRICTED	FORGE architecture, agent configs, ML models, pricing algorithms, IP registry	CEO, CTO, CISO only
INTERNAL	Playbooks, templates, engagement data, dashboards	NOVATELabs employees (role-based)
CLIENT	NIN Analyzer dashboards, source of truth reports, scorecards	Client portal access
PUBLIC	Marketing, one-pagers, brand assets	Unrestricted

13.2 Sentrais Risk Exposure Management

Every stage gate in FORGE includes a Sentrais risk exposure assessment. The Risk Agent evaluates three dimensions before any gate can pass:

- **Model Risk:** Could this engagement create liability for Sentrais predictive models, AI systems, or methodology IP?
- **Reputational Risk:** Could a failure in this engagement damage Sentrais market positioning or client trust?
- **Commercial Risk:** Could this engagement create financial exposure through SLA breaches, scope failures, or contractual liability?

If any risk dimension scores above acceptable thresholds, the gate holds and escalation protocols activate. The Evidence Ledger records all risk assessments for audit and legal defense.

13.3 Client-Facing Language Rules

Never mention: FORGE, agent names, ML models, churn prediction, self-learning engine, resilience gate (internal), competitive intelligence module.

Client equivalents: Data-driven insights, proactive risk management, continuous improvement, operational intelligence, readiness validation, strategic benchmarking.

14. Competitive Intelligence Module

FORGE includes a dedicated Competitive Intelligence Agent that continuously monitors the positioning, pricing, methodology, and market activity of firms Sentrais competes against. This intelligence feeds into pricing decisions, proposal development, and strategic positioning.

14.1 Tracked Competitors

Tier	Firms	Intelligence Focus
Tier 1: Strategy	McKinsey, BCG, Bain, Deloitte Strategy	Methodology frameworks, pricing models, deliverable quality, client verticals, partner ecosystems
Tier 2: Digital	Deloitte Digital, Accenture, IBM Consulting, Capgemini	Technology stack, platform positioning, managed services models, AI integration strategies
Tier 3: Platform	ServiceNow, SAP, Salesforce, Palantir	Platform economics, licensing models, ecosystem lock-in strategies, enterprise penetration
Tier 4: Niche	Event security firms, venue management vendors, SEAR-adjacent providers	Domain-specific capabilities, pricing, client relationships, geographic coverage

14.2 Intelligence Outputs

- Monthly competitive briefing for executive team
- Proposal-specific competitive positioning analysis
- Quarterly pricing benchmark report
- Annual strategic landscape assessment
- Real-time alerts on competitor moves in Sentrais target verticals

15. Implementation Roadmap

FORGE implementation follows the March 15 cutover mandate from the Hayes 2026 strategic timeline. The system must be operational before active selling begins April 1.

Phase	Timeline	Deliverables	Dependencies
Foundation	Feb 8 – Mar 1	Evidence Ledger deployed. Core playbooks active (Discover, Diagnose). Style engine configured. Agent runtime operational. Resilience scoring engine live.	GCP project provisioned. Claude API access. Team onboarding. Brand token configuration.

Intelligence	Mar 1 – Mar 15	All 15 playbooks active. 22 agents orchestrated. Client dashboards ready. SLA engine configured. Design Agent production pipeline tested. Financial Agent tracking live.	Foundation complete. Vertex AI models trained. n8n workflows deployed. Figma API integrated.
Activation	Mar 15 – Apr 1	Full cutover. Legacy tools sunset. Team certified. First client onboarded. Competitive Intelligence module active.	Intelligence complete. GCP migration finalized. System cutover mandate executed.
Optimization	Apr 1 – Jun 30	Self-learning engine active. Cross-engagement analytics. NIN Analytics upsell live. NFL Draft validation. 80% Resilience Gate proven across first engagements.	30+ active engagements. Training data accumulation. NFL Draft event validation.
Scale	Jul 1 – Dec 31	FIFA Crucible validation. Federal model proven. Licensing model developed. 30 Blueprint360 POCs target achieved. Design Agent producing at full capacity.	FIFA data ingestion. SEAR framework validated. Federal pipeline active. Design template library mature.

16. Appendix: Approval & Version Control

Document Approval

Approver	Role	Scope	Status
Tye Hayes	CEO & President	Strategic approval, budget, Resilience Gate policy	Pending
Ryan Harrelson	CTO	Technical architecture, GCP infrastructure	Pending
Kirby Winters	CISO	Security framework, risk exposure model	Pending
Knox Phillips	CRO	Revenue model, competitive positioning	Pending

Version History

Version	Date	Change	Author
1.0	Nov 23, 2025	SIPE v1.0 foundation release. Internal delivery engine focused on churn prevention.	Tye Hayes
3.0	Feb 8, 2026	FORGE v3.0 complete redesign. Renamed from SIPE. NIN client delivery system, 15 playbooks, 22 agents, 80% Resilience Gate, Design Agent, competitive intelligence, financial management, data engineering, client success. Built on Claude + Gemini + GCP.	Tye Hayes

SENTRAIS

Antifragile. Sole-Source. Inevitable.
