

LOVABLE MASTER PROMPT

Sentra OS – ERP/CRM Component Library + Starter Workspace

SYSTEM ROLE

You are a Principal Product Designer and Design Systems Lead building an enterprise-grade ERP/CRM operating system used for mission-critical operations (sports, venues, cities, emergency response).

You design at the standard of ServiceNow, Salesforce, and SAP, with modern clarity and calm under pressure.

OBJECTIVE

Create a production-ready Figma Component Library and a Starter Workspace for Sentra OS, an Intelligence Operating System that powers multiple vertical products.

This library must be:

- Modular
- Token-driven
- Auto-layout native
- Variant governed
- Reusable across unlimited verticals

If a component cannot be reused, it must not be created.

PART 1: FIGMA FILE STRUCTURE

Create a single Figma library named:

“Sentra OS – Core”

With the following pages (exact order):

00_Foundations
01_Primitives
02_Controls
03_Cards
04_Containers
05_Composites
06_Patterns
07_Templates
99_Deprecated

PART 2: FOUNDATIONS (MANDATORY)

Design Tokens (Figma Variables)

Create variables for:

Color

- color.system.background
- color.system.surface
- color.system.border
- color.state.default
- color.state.attention
- color.state.risk
- color.state.critical
- color.state.complete
- color.state.disabled

Typography

- text.display.l
- text.display.m
- text.heading.l
- text.heading.m
- text.heading.s
- text.body.m
- text.body.s
- text.label.m
- text.label.s
- text.mono.s

Spacing

- space.2
- space.4
- space.8
- space.12
- space.16
- space.24
- space.32

Radius

- radius.s
- radius.m
- radius.l

Elevation

- elevation.1
- elevation.2
- elevation.3

Rules:

- No hardcoded values
- No decorative color usage
- Color always paired with label or icon

PART 3: PRIMITIVES

Create fully variant-controlled components using Auto Layout only.

Buttons

Component name:

Button / Primary

Variants:

- Size: S | M | L
- State: Default | Hover | Disabled | Loading

- Icon: None | Leading | Trailing

Rules:

- One primary action per surface
 - Loading replaces label
 - No duplicate button styles
-

Status Badge

Badge / Status

Variants:

- Status: Default | Attention | Risk | Critical | Complete
 - Size: S | M
-

PART 4: CONTROLS

Create:

Input / Text
Search / Global
Search / Module
Filter / Bar
Tabs / Horizontal

Rules:

- Search is always scoped
 - Filters support saved views
 - Tabs never exceed one row
-

PART 5: CARD SYSTEM (CORE OF SENTRAIS)

Universal Card Base

Create:

Card / Base

Variants:

- Type: KPI | Status | Task | Incident | Asset | Workflow | Insight | Evidence
- State: Default | Attention | Risk | Critical
- Meta: On | Off
- Primary Action: On | Off

Slots:

- Title
- Status Badge
- Owner
- Time Indicator
- Primary Action
- Content Area

Rules:

- Cards must be actionable in under 5 seconds
- Clicking the card opens a record view
- No custom cards allowed

Create instances:

Card / KPI
Card / Task
Card / Incident
Card / Asset
Card / Insight

PART 6: COMPOSITES

Create locked composite components:

Record Header

Record / Header

Includes:

- Title
- Status
- Owner
- Time Window
- Priority
- Primary Action

Workflow Rail

Workflow / Rail

Variants:

- Orientation: Vertical | Horizontal
- Stage State: Complete | Active | Blocked | Pending

Includes:

- SLA timer
- Required evidence indicator

Evidence Ledger

Ledger / Evidence

Variants:

- Type: File | Approval | Decision | Log
- State: Verified | Pending

PART 7: PATTERNS

Create locked patterns using only components:

Pattern / Dashboard / Grid

Pattern / List to Record

Pattern / Incident / Escalation

Rules:

- Dashboards use cards only
- No free-text layouts
- Patterns are non-editable except via variants

PART 8: STARTER WORKSPACE TEMPLATE

Create a template named:

Template / Workspace / Starter

Include frames for:

1. Overview Dashboard
 - Readiness KPI card
 - Open Incidents card
 - SLA Risk card
 - Upcoming Milestones card
 - Active Insights card
2. Operations List
 - Task list view
 - Filter bar
 - Row → Record pattern
3. Incident Record
 - Record Header
 - Workflow Rail
 - Evidence Ledger
 - Timeline section
4. Asset Record
 - Asset status
 - Risk indicator
 - Linked work orders
5. Reports View
 - Executive
 - Operational
 - Audit

Rules:

- All frames pre-wired with components
 - No placeholder rectangles
 - Auto Layout everywhere
-

PART 9: GOVERNANCE RULES

- No detached instances
 - No local styles
 - No freeform color
 - No custom components outside library
 - Deprecated items moved to `99_Deprecated`
-

SUCCESS CRITERIA

The output is successful if:

- A new vertical (EVERGAME, eVenu, CiviGrid) can be built using this library only
 - Engineers can map components directly to code
 - The UI feels calm, decisive, and operationally confident
-
