

Orchestrating **Resilience** in the Era of **Convergence**

Bridging High-Stakes Event Operations,
Smart City Infrastructure, and Community
Equity.

Martina Plantijn
An Introduction to NOVATeLabs & Tye Hayes
for Stanford University

The 2026-2029 Convergence: A Living Laboratory

The United States faces an unprecedented historical anomaly: the highest concentration of major global sporting events coinciding with accelerating climate risks.

Communities Don't Fail in Crises; Systems Fail Communities

The Friction Point:

Major events stress systems already strained by climate disasters and economic inequality.

The Critical Gap:

- **Wealth Extraction vs. Capacity Building.** Current models extract resources. We investigate how sports can build legacy resilience.
- **The Operational Paradox.** NFL/FIFA require flawless execution, while surrounding infrastructure is often under-resourced and interdependent.

Advancing Innovation Equity Through Applied Research

Who We Are:

NOVATeLabs is a veteran-owned, Black woman-led research organization.

Our Mission:

Operating at the intersection of sports, entertainment, and community resilience. We ensure communities historically excluded from technology decision-making have the power to shape how innovation affects their lives.

“

Core Philosophy:
**Innovation
without
governance
is a
vulnerability.**

Tye Hayes: Architect of High-Stakes Resilience

Veteran entrepreneur, innovation strategist, and former naval officer.

Key Credentials (The Moat)

- **NFL Innovation Hub:** Designed the R&D framework used by the league.
- **Operational Resilience:** Managed operations for **4 Consecutive Super Bowls.**
- **Critical Infrastructure:** Strategist for Atlanta & New Orleans (cities dealing with complex water/climate threats).

“I help high-stakes organizations turn their greatest operational vulnerabilities into competitive advantages through Applied Resilience and Governance.”

The Instrument: Sentrais Intelligence Core

A unified intelligence operating system that orchestrates continuous measurement and cross-sector coordination.

Relevance to Stanford:
This platform provides the real-time orchestration runtime with evidence ledger and readiness scoring required for academic analysis.

Proven Ground: The NFL Innovation Ecosystem

Context: Professional sports leagues create unique operational ecosystems that stress-test community systems.

Innovation Design

Designed the framework for the NFL Innovation Hub, bridging league operations with community benefit.

Stadium as Hub

Operational research conducted at Mercedes-Benz Stadium, SoFi Stadium, and Levi's Stadium.

Workforce

Created pathways from temporary Super Bowl employment to sustainable innovation careers.

Community Resilience & Disaster Preparedness

Aligning with Stanford Woods Institute for the Environment

- **The Research Question:** What happens when major events coincide with active disaster conditions (e.g., World Cup during fire season)?

- **Proposed Modeling:** Multi-hazard environment modeling: earthquake + wildfire + mass gathering scenarios.

- **Goal:** Investigating how event preparation can strengthen community disaster resilience rather than depleting resources.

Smart Cities & Critical Infrastructure

The Problem: Interdependent systems (power, water, cyber) are often fragile during mass gatherings.

Research Focus:

- **Grid Modernization:** Accelerating reliable energy deployment through event mandates.
- **PSPS Impact Modeling:** Analyzing Public Safety Power Shutoff scenarios during high-density events and optimizing backup systems.
- **Orchestration:** Testing AI decision-support tools that enhance response without creating over-reliance.

Responsible AI & Technology Governance

Aligning with Stanford Human-Centered AI Institute (HAI)

The Tension: AI, surveillance, and predictive systems are deployed in event environments without adequate governance, risking bias against vulnerable populations.

Research Focus:

- **Guardrails:** Frameworks for multi-agent automation in high-stakes environments.
- **Data Sovereignty:** Governance models that protect community interests (no commercial sale of surveillance data).
- **Protection:** Specific immigration-sensitive data protections for California's diverse workforce.

Education & Workforce Development

Stanford Integration:

- **Graduate Student Placements:** Field research at LA 2028 / Super Bowls.
- **Fellowships:** Supporting the Barbara Geter Fellowship for emerging civic leaders.

Program: MEIX (Music & Entertainment Innovation Excellence).
Using culturally-grounded pathways (Sports + Music) to teach STEM.

Tracks: Sound + Engineering, Music + Production, Media + Innovation.

The Partnership Ecosystem

Targeting **800+** community researchers trained and **80+** graduate students supported.

Projected Impact: 5-Year Outlook

Academic Output	Community Reach	Operational Scope
 15-20 Martina Plantijn Peer-reviewed publications	 8000+ Martina Plantijn Community researchers trained	 7 Martina Plantijn Major Global Events (World Cup, Olympics, Super Bowls)
 400+ Martina Plantijn NIN Applied Certifications	 75% Martina Plantijn Underrepresented participants	 Martina Plantijn Real-time stress testing of Atlanta and California grids.

The Convergence Window is Open

The Research Begins Now.

We are moving from fragility to strength. Join us in governing innovation where it matters most: at the intersection of high-stakes operations and community survival.

The window for 2026 preparation is closing. We need to move from Point Solutions to Governed Resilience.

PROJECTED IMPACT |

| TIME-SENSITIVE INITIATIVE

Let's formalize the partnership for the 2026-2029 Convergence.

Tye Geter (Hayes)
