

CHIMERA

The Hidden Unified Data Frame

FORENSIC ANALYSIS & ARCHITECTURE RECOMMENDATION

Sentrais Corporate Orchestration Framework

Prepared for: Tye Hayes, Founder & CEO

NOVATE | Sentrais Corporation

January 2026

CONFIDENTIAL & PROPRIETARY

1. Executive Summary

This forensic analysis examines the strategic session between Tye Hayes (Founder/CEO) and Knox (Chief Product Officer) to extract and formalize the CHIMERA corporate orchestration architecture. The session revealed a sophisticated four-zone structure designed to protect intellectual property, manage the NFL relationship strategically, and position Sentrais for scalable commercialization.

Key Strategic Decisions Identified

- CHIMERA established as the hidden unified data frame governing all corporate intelligence
- Four distinct zones created: Resilient Reach (Founder), NOVATEUS Foundation (Research), NOVATE Labs (Development), and Sentrais Inc (Commercialization)
- NFL positioned as exclusive research partner with closed, containerized architecture
- ASIRAP (formerly SIPE) designated as the core PMO/governance engine
- Go-to-market positioning narrowed to "Live Event Intelligence" under the resilience umbrella
- Dual-engine architecture (Resilience + Innovation) embedded in every model

Strategic Intent

The architecture is designed to accomplish three critical objectives: (1) Protect the founder's intellectual property through layered corporate structures, (2) Create clear stage-gates between research, development, and commercialization to control what enters the market, and (3) Position the NFL as a strategic research partner rather than a commercial client, enabling leverage for future deals while maintaining low-cost positioning.

2. Forensic Analysis: Strategy Session Findings

2.1 Corporate Structure Clarification

The session revealed critical distinctions between entities that were previously conflated:

Entity	Strategic Role (Per Session)
Resilient Reach	Founder's holding entity. Houses Tye's IP, secret sauce, and foundational frames. "Nobody can ever touch" - perpetual protection.
NOVATEUS Foundation	501(c)(3) nonprofit. Hosts research, hackathons, community innovation, workforce development. NFL Hub sits here as research.
NOVATE Labs	Technical staging company. Dev, staging, production environments. Compliance, architecture review, AI best practices. Stage-gate before commercialization.
Sentrais Inc	Public-facing commercial entity. Marketing, business development, client success. "Nothing comes to Sentrais that's not explicitly approved."

2.2 Engine Architecture Decisions

The session established specific engines and their placement within the corporate structure:

ASIRAP ("It's A Wrap") - Core PMO/Governance Engine

Renamed from SIPE to avoid public exposure. Houses: contracts, SOWs, partner timelines, governance, process automation, LMS training, onboarding. Positioned at Sentrais Inc level as the operational backbone.

SIGNAL Engine - Emergency/Crisis Intelligence

Handles early warning, disaster response, national crisis intelligence. All emergency models, data aggregation, and resilience research. Lives within NOVATEUS Foundation as research asset.

Founders Engine - Strategic Visibility

Tye's personal command dashboard. Taps into all companies, tracks performance against goals, maintains accountability across the ecosystem. Sits at Resilient Reach level.

EVERGAME Engine - Operational Intelligence

The operational frame that runs engagements. Contains the 360 model design, dual-engine (resilience + innovation) architecture. Referenced for all client deployments.

2.3 NFL Strategic Positioning

The session revealed a sophisticated approach to the NFL relationship:

- NFL positioned as research partner, not commercial client - "donated" \$600K+ in value through Tye's strategy investment
- EVERGAME designed as exclusive NFL product - "If you guys don't use it, I won't use it"
- NFL requires closed, containerized architecture separate from other clients
- NFL Hub remains in Foundation as research project - enables grant funding opportunities
- Strategic leverage: NFL brand validates all other vertical opportunities

2.4 Go-to-Market Positioning

Critical positioning decisions from the session:

Market positioning: "Live Event Intelligence" not "venues"

This broader positioning captures stadiums, concerts, festivals, major events while avoiding direct venue management competition.

Lead with: "Resilience Intelligence" not "Innovation"

People aren't prepared for innovation messaging. Resilience enables partnerships with innovation companies rather than competing with them.

Adjacent markets: Leagues → Whole cities

The storytelling narrative expands from venue-level to city-level resilience coordination.

3. CHIMERA Architecture Recommendation

Based on the forensic analysis, the following four-zone architecture is recommended:

ZONE 1: RESILIENT REACH - Founder Engine

Purpose	Founder's IP vault, strategic visibility, perpetual protection of core frameworks
Engine	Founders Engine - Performance tracking, accountability, cross-company visibility
Assets	Core frames, NIN methodology, EVERGAME design IP, secret sauce algorithms, founder playbooks
Data Flow	Receives: Performance data from all zones Sends: Foundational frames to Zone 2

ZONE 2: NOVATEUS FOUNDATION - RaaS & IaaS Research

Purpose	501(c)(3) research, community innovation, workforce development, grant-fundable research
Engines	SIGNAL Engine (Emergency/Crisis Intelligence) Innovation Engine (Capability Building)
RaaS (4 Stages)	Readiness & Compliance → Live Operations → After-Action Learning → Certification & Renewal
IaaS (4 Stages)	Discovery & Validation → Pilot Operations → Learning & Integration → Scale & Certification
Programs	NFL Hub Design (research), Community Innovation Hackathons, Innovation Intelligence, Barbara Geter Fellowship
Data Flow	Receives: Frames from Zone 1 Sends: Validated research outputs to Zone 3

ZONE 3: NOVATE LABS - Pentacle Engine

Purpose	Technical staging, quality assurance, compliance certification, stage-gate to commercialization
Engine	Pentacle Engine - Dev/Staging/Production lifecycle management
Environments	Development → Staging → Production (with isolated NFL container)
Governance	Architecture Review Board, AI Best Practices, Infrastructure-as-Code, Cloud Standards, Data Privacy, Version Control
Compliance	SOC 2 Type II, NIST 800-53, ISO 27001, FedRAMP pathway, contractual compliance terms
Data Flow	Receives: Research outputs from Zone 2 Sends: Certified, production-ready products to Zone 4

ZONE 4: SENTRAIS INC - Live Intelligence

Purpose	Public-facing commercial entity - marketing, business development, client success, revenue generation
----------------	---

Engine	ASIRAP (SIPE + PMO + Bus Dev + NIN) - Governance, contracts, SOWs, partner management, automation
Market Position	Live Event Intelligence - Resilience-first positioning
Products	eVenu (Venue Certification), CiviGrid (City Resilience), Airport OS, Federal Command, Tour Intelligence
Data Flow	Receives: Certified products from Zone 3 Sends: Market intelligence & performance data back to Zone 1

4. CHIMERA Data Flow Architecture

4.1 Bi-Directional Intelligence Flow

The CHIMERA architecture establishes a cyclical intelligence flow that compounds learning across all zones:

4.2 NFL Special Container

The NFL requires isolated architecture per the session directives:

- NFL Hub remains in Zone 2 as research project (enables FEMA/resilience grant funding)
- NFL Production (EVERGAME360 + NFLiOS) sits in isolated container within Zone 3
- Closed architecture - "military grade" - never exposed to external systems
- Only approved personnel with NFL contract clearance can access NFL data
- Separate test and production environments for NFL (not shared staging)

4.3 Evidence Ledger & Continuous Learning

Core to the CHIMERA architecture is the immutable evidence ledger that captures:

- All decisions, actions, communications, and outcomes across zones
- Learning insights that feed back into Zone 2 research
- Compliance documentation for FEMA, insurance, regulatory requirements
- The "core brain" that is always learning from all deployments

5. Engine Specifications

5.1 Founders Engine (Zone 1)

Attribute	Specification
Primary Function	Founder visibility, accountability tracking, performance against goals
Key Capabilities	Cross-company dashboards, residual tracking, goal alignment, decision logging
Access Control	Founder-only access. Executive team with limited visibility as approved.
Integrations	All zone engines feed performance metrics back to Founders Engine

5.2 SIGNAL Engine (Zone 2 - RaaS)

Attribute	Specification
Primary Function	Emergency/crisis intelligence, early warning, disaster response research
Key Capabilities	Real-time signal processing, pattern recognition, anomaly detection, predictive analytics
Research Focus	CiviGrid (FEMA), TSA, national crisis response, game-day resilience
Security	"Locked down tight" - core brain data stays within Foundation

5.3 Innovation Engine (Zone 2 - IaaS)

Attribute	Specification
Primary Function	Technology evaluation, vendor certification, pilot orchestration, learning transfer
Key Capabilities	Hackathon orchestration, community innovation programs, Think Tank ideation
Programs	NFL Hub Design, Barbara Geter Fellowship, Community Hackathons, Draft Activations

5.4 Pentacle Engine (Zone 3)

Attribute	Specification
Primary Function	Development lifecycle management, compliance certification, stage-gate control
Environments	Dev → Staging → Production (with isolated NFL container)
Governance	Architecture Review Board, AI Best Practices, IaC Standards, Cloud Standards
Compliance	SOC 2, NIST 800-53, ISO 27001, FedRAMP pathway, data privacy standards
Change Mgmt	Version control, AI model versioning, contractual term compliance

5.5 ASIRAP Engine (Zone 4)

Attribute	Specification
Composition	SIPE Engine + PMO + Business Development + NIN Methodology
Primary Function	Commercial operations governance, contract management, partner orchestration
Key Capabilities	Contracts, SOWs, partner timelines, process automation, LMS training, onboarding
Automation	n8n workflows, AI agents, template generation, meeting analysis, client reports
NIN Integration	Discover → Diagnose → Design → Deploy → Debrief (5D methodology embedded)

6. Implementation Recommendations

6.1 Immediate Actions (0-30 Days)

1. Formalize corporate entity structure: Resilient Reach → NOVATEUS Foundation → NOVATE Labs → Sentrais Inc
2. Rename SIPE to ASIRAP in all internal documentation and remove NIN framework from public materials
3. Establish NFL container architecture in Zone 3 with isolated test/production environments
4. Update go-to-market messaging to "Live Event Intelligence" with resilience-first positioning
5. Document the CHIMERA architecture in secure, internal-only repository

6.2 Near-Term Actions (30-90 Days)

6. Deploy Founders Engine with cross-zone visibility dashboards
7. Configure ASIRAP with contract management, SOW tracking, and partner orchestration
8. Establish Pentacle Engine governance: Architecture Review Board, compliance checklists
9. Activate NFL Hub research positioning in Foundation for grant/funding opportunities
10. Train team on zone boundaries and information classification protocols

6.3 Strategic Actions (90+ Days)

11. Full CHIMERA data flow implementation with bi-directional intelligence cycling
12. SIGNAL Engine deployment for CiviGrid/FEMA research initiatives
13. Evidence Ledger activation across all zones with immutable audit trails
14. Community innovation hackathon activation (Draft activation in Philadelphia)
15. Partner ecosystem expansion: AWS/Google Public Sector, Metadata, delivery partners

7. Strategic Alignment Summary

7.1 Session Directives Addressed

Session Directive	Architecture Response
"NIN never public - covert marketing only"	NIN embedded in ASIRAP, never exposed in materials
"NFL needs closed, military-grade architecture"	Isolated NFL container in Zone 3 with restricted access
"Nothing to Sentrais without explicit approval"	Zone 3 Pentacle Engine serves as stage-gate
"Founder IP protected in perpetuity"	Zone 1 Resilient Reach holds all foundational IP
"Market as Live Event Intelligence"	Zone 4 Sentrais positioned for resilience-first entry
"Core brain always learning, belongs to Foundation"	SIGNAL Engine in Zone 2 with Evidence Ledger cycling
"Two people minimum in every room"	Operational policy embedded in ASIRAP governance

7.2 Closing Statement

The CHIMERA architecture represents the formalization of the strategic vision articulated in the Tye-Knox session. It creates clear boundaries between research, development, and commercialization while protecting intellectual property, managing the NFL relationship strategically, and positioning Sentrais for scalable growth.

The four-zone structure ensures that: (1) Founder IP remains protected in perpetuity, (2) Research activities can pursue grant funding while feeding commercial products, (3) Development maintains quality gates before anything reaches market, and (4) Commercial operations focus on revenue generation without exposing internal architectures.

"We're not just building a company. We're building the category."

— Tye Hayes, Founder & CEO
