

PITCHTAPE (TRANSITIONAL) PARITY + REPLACEMENT MAP

Applicant Intake Architecture

Design Principle

Pitchtape is an intake surface, not a system of record.
Sentrais is the **only system of truth** from submission forward.

A. Functional Parity Map

Capability	Pitchtape (2026)	Sentrais Intake (Future)	System of Record
Multi-step application wizard	✓	✓	Sentrais
Video upload / recording	✓	Planned (WebRTC/Ziggeo)	Sentrais (URL ref only in 2026)
Deck upload	✓	✓	Sentrais
Applicant dashboard	✓ (basic)	✓ (governed)	Sentrais
Status updates	✓	✓	Sentrais
Reviewer access	✗	✓	Sentrais
Scoring / evaluation	✗	✓	Sentrais
Evidence ledger	✗	✓	Sentrais
Audit trail	✗	✓	Sentrais

Key rule:
Pitchtape never holds evaluations, scores, decisions, or audit artifacts.

B. Transitional Architecture Pattern

2026 Hybrid Model (Approved)

Applicant

↓

Pitchtape (Submission UX only)

↓ Webhook (Event-driven)

Sentrais Ingestion API

↓

Sentrais Innovation Engine

2027+ Native Model (Planned)

Applicant

↓

Sentrais Intake Module

↓

Sentrais Innovation Engine

No downstream systems change when Pitchtape is removed.

That is architectural maturity.

C. Data Ownership & Flow Rules

1. Pitchtape stores

- Raw applicant uploads
- Contact details
- Submission metadata

2. Sentrais stores

- Normalized submission record

- Generated summaries
- Reviewer assignments
- Scores, comments, decisions
- Evidence ledger
- Timeline + NIN phase mapping

3. Sentrais references

- Pitchtape asset URLs (video, deck)
- Never copies binaries in 2026

D. Webhook Contract (Pitchtape → Sentrais)

Trigger

- `submission.completed`

Required Payload Fields

- `pitchtape_submission_id`
- `program_id`
- `applicant_id`
- `asset_urls`
- `category tags`
- `timestamps`

Sentrais Response

- innovation_record_id
- orchestration_stage = P1_Discovery
- assigned_reviewers[]
- SLA clocks started

Pitchtape becomes **stateless** after this moment.

PART 3 — APPLICANT → INTERNAL SENTRAIS HANDOFF

What Happens After “Submit”

This is where your system is *meaningfully different* than hackathon tools.

A. Handoff Event Timeline

T0 — Applicant Clicks Submit

- Pitchtape validates completion
 - Fires webhook to Sentrais
-

T0 + Seconds — Sentrais Ingests

Sentrais performs **deterministic normalization**:

1. Create **Innovation Record**
2. Bind to:

- Ecosystem
- Program
- Challenge instance

3. Assign:

- NIN Phase = P1 Discovery
- EVERGAME Stage = Stage 1

4. Generate:

- Evidence Ledger entry
- SLA timers

T0 + Minutes — Internal Activation

Sentrais automatically:

- Assigns reviewers by role
- Creates reviewer task queue
- Generates AI summary for reviewers
- Updates internal dashboards
- Pushes applicant status back to Pitchtape

Applicant sees:

“Under Review”

NFL / Client sees:

Full internal record, evidence-ready

B. Internal Record Shell (What Reviewers See)

Innovation Record = Single Object

Bound components:

- Applicant profile (read-only)
- Assets (linked)
- Reviewer scorecards
- Q&A thread
- Evidence completeness indicator
- Stage gate eligibility
- Temporal history

No duplication. No silos.

C. Governance Boundary (Critical)

Surface	Can See	Cannot See
Applicant	Status, requests, outcomes	Scores, rankings, reviewers
Reviewer	Assigned criteria only	Other reviewer scores
Executive	Aggregates, recommendations	Raw reviewer drafts
NOVATE Ops	Everything	Cannot change scoring rules
Client	Decisions, evidence	NOVATE IP logic

This is enforced **by policy**, not UI logic.

D. Why This Is Defensible

If challenged:

- You show the **Evidence Ledger**
- You show timestamps
- You show role-based actions
- You show consistent criteria
- You show no vendor favoritism

This is why Sentrais is not a “platform”.
It is **innovation infrastructure**.
