

SENTRAIS DESIGN SYSTEM SPEC

Version 1.0 | ERP/CRM-grade Operating Standard

1. Design System Purpose

Sentrais is an **Intelligence Operating System**, not a collection of screens.
The design system must enable:

- Modular ERP-style configuration
- CRM-style record continuity
- Calm, decisive operations under pressure
- Vertical scalability without redesign

Non-negotiable principle:

If a component, pattern, or workflow cannot be reused across verticals, it does not belong in the core system.

2. Global Design Foundations

2.1 Layout Grid

- Base grid: 8px system
- Content max width: 1440px
- Primary layouts:
 - **Dashboard Canvas**
 - **List View**

- **Record View**
- **Workflow View**
- **Evidence / Audit View**

2.2 Color Usage (Functional, Not Decorative)

Color communicates **state and urgency**, not branding.

- Neutral Base: Slate / White
- State Colors:
 - Normal
 - Attention
 - Risk
 - Critical
 - Confirmed / Complete
- Accent colors may be inherited from client DNA at the **workspace level**, never at the system level.

Rule: Color never carries meaning alone. Always paired with label + icon.

3. Component Architecture

3.1 Component Taxonomy

All UI components fall into one of five tiers:

1. **Primitives**
Buttons, inputs, tags, icons, dividers

2. Controls

Filters, search, selectors, date pickers

3. Cards

KPI, Status, Task, Incident, Asset, Insight, Evidence

4. Containers

Panels, sections, tabs, accordions

5. Composites

Dashboards, record headers, workflow rails

Governance Rule:

No component may skip a tier.

4. Card System Specification

4.1 Universal Card Contract

Every card must support the following properties:

- ID
- Title
- Type
- Primary Status
- Owner / Role
- Time Context
- Primary Action
- Secondary Actions
- Linked Records

4.2 Card Interaction Rules

- Click body = open Record View
- Primary action always visible
- Secondary actions in overflow
- Hover reveals metadata, never actions

4.3 Mandatory Card Types (Core)

- KPI Card
- Status Card
- Task Card
- Incident Card
- Asset Card
- Workflow Card
- Insight Card
- Evidence Card

Rule: Dashboards are composed of cards only. No free-form content.

5. Record View Standard

5.1 Record Anatomy

Every record uses the same vertical structure:

1. **Header**
 - Name
 - Status

- Owner
- Time Window
- Priority / Risk

2. Executive Summary

- Auto-generated or curated
- “What matters now”

3. Workflow Rail

- Current stage
- Next action
- Blockers
- SLA clock

4. Linked Objects

- Tasks
- Incidents
- Assets
- Agencies / Vendors

5. Evidence Ledger

- Files
- Decisions
- Approvals
- Logs

6. Timeline

- Immutable activity log

Rule: Users must never scroll to discover critical status.

6. Workflow Engine Standard

6.1 Workflow Structure

- Stage-based
- Linear with controlled branching
- Entry and exit criteria defined
- Evidence-gated where required

6.2 Core Workflow Actions

Every workflow must support:

- Assign
- Approve / Reject
- Escalate
- Comment
- Attach Evidence
- Override with Rationale
- Complete / Reopen

6.3 SLA and Escalation

- Time thresholds defined per stage

- Automatic escalation paths
- Visible countdown timers

Rule: A workflow without accountability is a checklist, not a workflow.

7. Navigation System

7.1 Global Navigation (Always Present)

- Global Search
- Create
- Notifications
- Help
- User Profile

7.2 Workspace Navigation

Left rail contains **modules**, not pages:

- Overview
- Operations
- Incidents
- Assets
- People
- Reports
- Settings

7.3 Navigation Invariants

- No dead ends
 - Back always means back
 - “What’s next” is always visible
-

8. Permissions and Governance

8.1 Permission Model

- Role-based
- Context-aware
- Field-level control supported

8.2 Standard Roles

- Viewer
- Contributor
- Operator
- Manager
- Admin
- Auditor

8.3 Audit Requirements

- All overrides logged
- All approvals recorded
- All exports tracked

Rule: Trust is earned through visibility.

9. Reporting and Intelligence

9.1 Report Classes

Every workspace must ship with:

- Executive View
- Operational View
- Audit View

9.2 Insight Design Rules

Insights must display:

- Observation
- Impact
- Recommended Action
- Confidence Indicator
- Evidence Link

Rule: No black-box intelligence.

10. Build and Release Standards

10.1 Definition of “Production-Ready”

- Responsive
- Accessible

- Observable
- Documented
- Tested with empty, partial, and critical data

10.2 Component Governance

- Single component library
 - Token-driven styling
 - Design review required for additions
-

SENTRAIS STARTER WORKSPACE

Universal Template for Any Vertical

Workspace Name

[Client / Vertical] Operations Workspace

Default Modules

1. Overview (Dashboard)

Cards:

- Readiness KPI
- Open Incidents
- SLA Risk

- Upcoming Milestones
 - System Health
 - Active Insights
-

2. Operations

List Views:

- Tasks
- Checklists
- Work Orders

Record Type:

- Operational Task Record
 - Linked to Assets, Events, People
-

3. Incidents

List Views:

- Active
- Escalated
- Resolved

Record Type:

- Incident Record
- Severity-driven workflow

- Evidence required for closure
-

4. Assets

List Views:

- Critical Assets
- At-Risk Assets
- Maintenance Queue

Record Type:

- Asset Record
 - Lifecycle status
 - Predictive risk indicator
-

5. People & Partners

Objects:

- Internal Teams
- Vendors
- Agencies

Capabilities:

- Role assignment
- Access scope
- Accountability mapping

6. Reports

Prebuilt:

- Executive Readiness Brief
- Operational Performance
- Compliance & Audit Summary

7. Settings (Permissioned)

- Roles
- Workflow configuration
- SLA thresholds
- Integration status

Golden Path User Journey

Dashboard → Card → Record → Workflow → Evidence → Report

This journey must be intact before any customization.

Final Governance Statement

Sentra is does not ship features.
It ships **operational confidence**.

Every design decision must answer one question:

Does this help a leader make the right call, faster, with proof?
