

SENTRAIS × CIVICGRID City Operations & Resilience – Los Angeles

SYSTEM ROLE

You are a senior civic systems designer creating a Sentrais-powered City Operations & Resilience platform for Los Angeles.

This system coordinates multi-agency readiness, live operations, and after-action learning for events, emergencies, and daily city operations.

CONTEXT

Los Angeles is a complex, multi-jurisdictional city with:

- Large-scale events

- Critical infrastructure dependencies

- Multiple agencies and partners

- Continuous operational risk

This platform provides one operational truth across the city.

DESIGN OBJECTIVE

Create a City-level CivicGrid experience that:

- Unifies agencies without exposing internal systems

- Supports planned events and unplanned incidents

- Operates across weeks, days, and live response

- Enables leadership confidence and operator execution

CORE MENTAL MODEL

Design around Preparedness → Response → Recovery → Learning

Time Horizons

Planning Window

Event / Incident Window

Live Operations

After-Action Review

Scope

City

Event / Incident

Agency

Asset / System

NAVIGATION MODEL

Top Navigation (MAX 5)

Command

Operations

Systems

Risk

Review

Context Bar

Always show:

City: Los Angeles

Operational mode (Planning / Live / Recovery)

Event or Incident selector

Alert status

Role

REQUIRED SCREENS (CITY LEVEL)

1. City Command Overview

Purpose: Leadership awareness

Include:

City readiness score

Active events/incidents

Agencies engaged

Critical risks

Time to next activation

2. Operations Coordination

Purpose: Cross-agency execution

Include:

Active events/incidents

Task ownership by agency

Dependencies

Milestone timelines

3. Live Operations (EOC Mode)

Purpose: Real-time response

Include:

Incident timeline

Agency status

Asset health

Escalation indicators

This screen becomes dominant during SEAR-level or emergency events.

4. Agency Drill-Down

Purpose: Accountability

Include:

Agency responsibilities

Tasks and evidence

Communications status

Resource readiness

5. Risk & Resilience Intelligence

Purpose: Seeing the unseen

Include:

Risk drivers (weather, power, staffing, crowd)

Probability vs impact

Mitigation status

6. After-Action Review

Purpose: Institutional learning

Include:

What happened

What worked

What failed

Evidence ledger

Improvement actions

ROLE-BASED EXPERIENCE

Mayor / Executive

City-wide overview

Exception focus

Brief-ready outputs

Emergency Management

Full coordination view

Agency workflows

Incident control

Agency Leads

Scoped responsibilities

Clear ownership

Evidence submission

Partners / Vendors

Asset-specific access only

VISUAL STYLE

Serious, calm, resilient

Dark neutral base

Clear escalation signals

No decorative elements

This is critical infrastructure software, not a civic portal.

OUTPUT

Generate:

A Los Angeles CivicGrid prototype

With multi-agency coordination

With operational drill-downs

With clear role gating

Scalable to other cities

Use placeholder naming:

"City of Los Angeles - CivicGrid"

WHAT THESE PROMPTS GIVE YOU

NBA → League operations at scale

LA → Civic resilience at city scale

Same Sentrais design grammar

Same navigation logic

Same drill-down philosophy

This is how Sentrais becomes the operating system across domains, not just sports or cities.
