

SENTRAIS × FIFA WORLD CUP 2026 - LOVABLE MASTER PROMPT (EG and CiviG)

Multi-City Mega-Event Operations OS

SYSTEM ROLE

You are a principal systems designer and operations architect designing a Sentrais-powered World Cup 2026 Operations OS.

This system supports:

FIFA tournament leadership

Host nation leadership

Host cities

Stadium operators

Transportation, security, and emergency partners

This is event-critical infrastructure, not a tournament website.

CONTEXT

World Cup 2026 is:

Multi-nation (US, Canada, Mexico)

Multi-city

Multi-venue

Multi-week

Continuous operations, not single-day events

The system must coordinate tournament operations and civic readiness simultaneously.

DESIGN OBJECTIVE

Create a World Cup-specific operating system that:

Operates across Tournament Phases

Unifies sports operations + city operations

Enables host-city accountability

Supports live match operations

Transitions seamlessly into legacy reporting

This prototype becomes the canonical blueprint for World Cup 2026 execution.

CORE MENTAL MODEL

Design around Tournament Phase × City × Match × System

Tournament Phases

Pre-Tournament Readiness

Group Stage

Knockout Stage

Semifinals

Final

Post-Tournament Review

Scale

Tournament Command

Host City

Venue

Match

System / Asset

NAVIGATION MODEL

Top Navigation (MAX 5)

Do not exceed.

Command

Operations

Cities

Risk

Review

All other views are drill-downs, not top-level destinations.

Persistent Context Bar

Always display:

Event: FIFA World Cup 2026

Host Country / City selector

Tournament Phase

Match Day

Operational Mode (Planning / Live / Recovery)

Alert State

Role

REQUIRED SCREENS (WORLD CUP)

1. Tournament Command Center

Purpose: FIFA + Host Nation oversight

Include:

Tournament readiness index

Active host cities

Venues at risk

Matches today

Countdown to next kickoff window

Board-safe. Media-resilient.

2. Tournament Operations (Core Screen)

Purpose: Run the competition

Include:

Match Day selector

All matches today

City readiness roll-ups

Venue exceptions

Drill-down into city or venue

This is the daily execution surface.

3. Host City Operations

Purpose: City-level coordination

Include:

City readiness score

Matches hosted

Transportation status

Safety & emergency posture

Agency coordination

This aligns with city EOC operations.

4. Venue & Match Operations

Purpose: Match execution

Include:

Venue readiness
Match milestones
System checks
Staffing status
Evidence and certifications

5. Live Match Operations

Purpose: Real-time execution

Include:

Matches live now
Venue system health
Incidents and escalations
Crowd and access indicators
This screen dominates on match days.

6. Risk & Tournament Integrity

Purpose: Protection and trust

Include:

Risk drivers (crowd, weather, transport, cyber)
Probability vs impact
Mitigation status
Cross-city correlation

7. Post-Tournament Review & Legacy

Purpose: Accountability and continuity

Include:

City performance summaries

Incident analysis

Evidence ledger

Compliance validation

Legacy recommendations

ROLE-BASED EXPERIENCE

FIFA / Tournament Executive

Tournament-wide signals

Exception-only focus

Brief-ready exports

Tournament Ops

Full coordination control

Match-day execution

Escalation authority

Host City Leadership

City-scoped execution

Agency coordination

Readiness accountability

Venue Ops

Match execution

System checks

Evidence submission

TERMINOLOGY RULES

Use FIFA-neutral language:

“Match Day”

“Venue”

"Host City"

"Tournament Phase"

"Competition Window"

Avoid league-specific US terminology.

VISUAL STYLE

Neutral, international, authoritative

Calm under pressure

Dark base with clear escalation signals

No decorative branding

OUTPUT

Generate:

A World Cup 2026 operations prototype

With tournament-phase logic

With city → venue → match drill-downs

With role-aware navigation

Use placeholder:

"FIFA World Cup 2026 – Operations Command"
