

SENTRAIS × SEAR - LOVABLE MASTER PROMPT

National Special Security Event (NSSE) Operations OS

SYSTEM ROLE

You are a principal systems architect and crisis-operations designer creating a Sentrais-powered SEAR-Level Operations and Security Coordination System.

This system supports federal, state, and local agencies coordinating a SEAR-rated / NSSE event.

This is critical national infrastructure software, not a planning dashboard.

CONTEXT

A SEAR-level event involves:

Federal lead agencies (USSS, DHS, FBI)

State and local law enforcement

Emergency management

Transportation, utilities, health systems

Private partners and venue operators

The system must provide:

One operational truth

Jurisdiction-aware visibility

Clear command authority

Real-time response coordination

Evidence-backed accountability

DESIGN OBJECTIVE

Create a SEAR-Level Command, Coordination, and Review system that:

Supports pre-event readiness

Enables live operational command

Coordinates multi-agency response

Maintains evidence and audit trails

Transitions cleanly into after-action review

This prototype becomes the baseline OS for all future SEAR / NSSE activations.

CORE MENTAL MODEL (NON-NEGOTIABLE)

Design around Command × Time × Jurisdiction

Command Layers

Federal Command

State Unified Command

City / Local EOC

Venue Command

Agency / Partner

Time Horizons

Planning Window (T-180 → T-14)

Readiness Validation (T-14 → T-3)

Live Operations (T-72 → Event End)

Recovery (T+0 → T+7)

After-Action Review

Jurisdiction

Federal

State

Local

Venue / Private Sector

NAVIGATION MODEL

Top Navigation (MAX 5)

Command

Operations

Systems

Risk

Review

No admin, no configuration clutter in the primary nav.

Persistent Context Bar

Always display:

Event Name (e.g., "Super Bowl LIX – SEAR 1")

Operational Mode (Planning / Live / Recovery)

Jurisdiction View (Federal / State / City)

Time to Activation or Event

Alert Status

User Role

REQUIRED SCREENS (SEAR LEVEL)

1. SEAR Command Overview

Purpose: Federal and executive situational awareness

Include:

Overall readiness index

Active agencies

Critical risks

Incident count

Escalation posture

This view must be brief-ready.

2. Unified Operations Coordination (Core Screen)

Purpose: Run the event

Include:

Timeline of milestones

Agency task ownership

Dependencies across agencies

Venue readiness roll-ups

Escalation paths

This is the daily operating surface for Unified Command.

3. Live Operations (EOC Mode)

Purpose: Real-time response

Include:

Active incidents

Multi-agency status

Resource availability

Communications status

Decision log

This screen dominates during T-72 through Event End.

4. Venue & Perimeter Operations

Purpose: Ground truth

Include:

Venue readiness

Perimeter zones

Access control status

Crowd flow indicators

Private partner coordination

5. Systems & Infrastructure

Purpose: Trust and continuity

Include:

Communications systems

Power and utilities

Transportation

Cyber posture

Medical readiness

6. Risk & Threat Intelligence

Purpose: Anticipation and prevention

Include:

Threat vectors

Probability vs impact

Intelligence confidence level

Mitigation actions

Cross-jurisdiction correlation

7. After-Action Review & Evidence

Purpose: Accountability and improvement

Include:

Event summary

Incident analysis

Evidence ledger

Compliance validation

Improvement recommendations

This view must support formal AARs and federal reporting.

ROLE-BASED EXPERIENCE RULES

Federal Leadership (DHS / USSS / DOJ)

National posture

Exception-based signals

Exportable briefs

Unified Command

Full operational visibility

Task coordination

Escalation authority

State / City EOC

Jurisdiction-scoped execution

Agency workflows

Resource coordination

Venue Command

Site-specific readiness

Perimeter and access control

Incident reporting

Private Partners

Asset-specific access only

Task execution and proof

TERMINOLOGY RULES

Use SEAR-appropriate language:

“Unified Command”

“Operational Period”

“Jurisdiction”

“Incident”

“Resource”

“After-Action Review”

Avoid:

Consumer UI language

Sports metaphors

Informal labels

VISUAL STYLE

Calm, serious, resilient

Dark neutral base

Clear escalation signals

Minimal motion

Designed for 24/7 EOC use

This should feel like:

National command software

Aviation or defense systems

Emergency operations infrastructure

OUTPUT INSTRUCTIONS

Generate:

A SEAR-Level Operations prototype

With federal-grade hierarchy

With jurisdiction-aware drill-downs

With role-gated visibility

Ready to scale to any NSSE

Use placeholder naming:

“SEAR-Level Operations Command”

SUCCESS CRITERIA

This system should feel like:

The source of truth during crisis

Defensible under review

Trusted by operators

Legible to executives

Repeatable across events
