

SENTRAIS × WORLD CUP 2026 - Unified Multi-Mode Operations & Security OS LOVABLE MASTER PROMPT

(Tournament • City • Venue • Federal)

SYSTEM ROLE

You are a principal systems architect and master experience designer creating a single Sentrais-powered operating system for World Cup 2026.

This system must dynamically switch between operational modes without changing navigation logic, design language, or mental model.

This is mission-critical infrastructure, not a dashboard collection.

CORE DESIGN INTENT

Design one system that:

Adapts by mode, not by product

Preserves calm under pressure

Supports multi-jurisdiction command

Scales from global oversight to field execution

Maintains audit-grade evidence and accountability

Users should feel they are in the same system, even as authority and scope change.

NON-NEGOTIABLE PRINCIPLE

Mode changes behavior, not structure.

Navigation, layout, and interaction patterns remain constant.

Only visibility, depth, and authority change.

MULTI-MODE ARCHITECTURE

Supported Modes (Single Toggle)

Tournament Mode

FIFA leadership and tournament operations

City Mode

Host city and EOC coordination

Venue / Match Mode

Stadium and match execution

Federal Security Mode (SEAR Overlay)

DHS, USSS, FBI, Unified Command

Mode is selected via a Mode Selector in the persistent context bar.

CORE MENTAL MODEL

Design around Scale × Time × Authority

Scale (Always Available)

Global Event

Host City

Venue

Match

System / Asset

Time

Pre-Tournament

Competition Phase

Match Day

Live Operations

Recovery

After-Action Review

Authority

Executive

Operations Command

City / EOC

Venue Ops

Agency / Partner

NAVIGATION MODEL (SINGLE, UNCHANGING)

Top Navigation (MAX 5)

Command

Operations

Systems

Risk

Review

No additional top-level items in any mode.

PERSISTENT CONTEXT BAR (CRITICAL)

Always visible. Always authoritative.

Include:

Event: FIFA World Cup 2026

Mode Selector (Tournament | City | Venue | Federal)

Location Selector (City → Venue)

Time Selector (Phase → Match Day)

Operational Status

Alert Level

User Role / Clearance

This bar defines reality for the user.

CORE SCREENS (USED IN ALL MODES)

Each screen adapts based on the active mode.

1. COMMAND

Purpose: Situational awareness

Tournament Mode

Tournament readiness index

Active host cities

Venues at risk

Matches today

City Mode

City readiness

Active matches/events

Agencies engaged

Infrastructure posture

Venue Mode

Venue readiness

Upcoming match

System health

Open gaps

Federal Mode

National threat posture

SEAR status

Matches of concern

Jurisdiction engagement

2. OPERATIONS (PRIMARY WORK SURFACE)

Purpose: Execute the mission

Tournament Mode

Match Day execution board

City readiness roll-ups

Venue exceptions

City Mode

Multi-agency task coordination

Dependencies

Milestones by operational period

Venue Mode

Match milestones

Task execution

Evidence submission

Federal Mode

Unified command tasking

Resource coordination

Escalation workflows

3. SYSTEMS

Purpose: Trust and continuity

Includes:

Communications

Power / utilities

Transport

Access control

Technology platforms

Scope changes by mode:

Tournament → aggregate

City → jurisdictional

Venue → asset-level

Federal → critical infrastructure view

4. RISK

Purpose: Anticipation and prevention

Includes:

Risk matrix (probability × impact)

Drivers (crowd, weather, cyber, staffing)

Mitigation status

Cross-city correlation

Federal Mode introduces:

Threat vectors

Confidence levels

Intelligence gating

5. REVIEW

Purpose: Accountability and learning

Includes:

After-Action Reviews

Evidence ledger

Compliance validation

Improvement actions

Exportable briefs

Federal Mode supports:

Formal AAR

Inspector General review

Congressional-grade outputs

ROLE & CLEARANCE LOGIC

Visibility is governed by:

Role

Mode

Jurisdiction

Clearance

Examples

FIFA Executive sees Tournament Command only

Mayor sees City Mode, Command + Ops

Venue Ops sees Venue Mode, Ops + Systems

Federal users see Federal Mode overlay with gated intelligence

No user ever sees everything.

TERMINOLOGY RULES

Use international and federal-safe language:

Match Day

Venue

Host City

Unified Command

Operational Period

After-Action Review

Avoid:

League-specific slang

Consumer UI language

Decorative labels

VISUAL DESIGN DIRECTION

Calm, modern, connected

Dark neutral base

Clear status signaling

Minimal motion

Designed for 24/7 operations

This should feel like:

Aviation command

Emergency operations

Global logistics

Not sports software.

OUTPUT INSTRUCTIONS

Generate one unified prototype that:

Supports all four modes via a mode toggle

Maintains consistent navigation

Changes depth and authority by mode

Scales from executive to operator

Is reusable for future mega-events

Use placeholder name:

“World Cup 2026 – Unified Operations OS”

SUCCESS TEST

This system should:

Survive federal review

Be legible to executives

Be indispensable to operators

Replace fragmented tools

Scale beyond World Cup 2026
