

Sentrais Unified Master Calendar

Operational Cadence Blueprint: Maximum Throughput, Minimal Overhead.

The 10-Day Execution Timeline

Balancing System Synchronization with Uninterrupted Build Capacity.

Legend:

-  Amber Pillars = Alignment Overhead (Synchronized Action).
-  Cyan Hatched Zones = Maximum Throughput (Asynchronous Execution).

Operational Agent Matrix

Systemic Responsibilities, Intervention Points, and Core Outputs.

Agent / Role	Intervention Point	Required Action	System Output
Governance Agent	Day 1 (The Huddle)	Reset the structural framework for the upcoming cycle.	Updated RACI Matrix & Defined Sprint Buckets.
Solution Architect, EL, MetaData	Day 3 (Tech Sync)	Conduct mandatory technical alignment.	Synchronized Temporal State Machines.
QA Agent	Day 9 (QA Review)	Run final structural validation.	Clearance against Hard Block Requirements.
Learning Agent	Day 10 (Retrospective)	Ingest cycle performance data.	Updated SIPE Engine.

No operational role acts outside these defined temporal boundaries without Governance exception. This structural discipline is what guarantees minimal overhead.
