

Game Day Requirements

GDA Module Requirements (As of 4/21/2025 - from GDA Module & EverGame Platform Vision and Scope ppt)

Security

- OKTA Integration: Required by the NFL for secure authentication.
- Vendor Permissions: Define specific role-based access for non-NFL users of the app (primarily GDAs).

Executive Dashboards

- Provide summarized activity for four critical areas: Stadium Infra, Network Infra, Football Tech, and Equity Scenario, across all stadiums.

Interoperability

- Enable integration with third-party systems (specific integrations to be defined) for dynamic updates.

Readiness Updates

- Allow viewing and updating the completion status of tasks.
- Implement countdown or time-based automation to indicate the point in time when tasks must be completed.
- Include alerts and notifications for failures and logged issues.

Communication

- Support closed channel communication tied to specific readiness criteria and issues.
- Incorporate voice-to-text capabilities to facilitate ease of use for closed channel communications and note-taking for tasks.

Mobile First

- Design the experience primarily for mobile, especially for the GDA role.

Reporting

- Include comprehensive reporting features (specific details to be defined).

Consolidated Requirements List for Executive Dashboards

Executive Dashboard Requirements

Aaron's Requirements

- Distinguish between club-hosted stadium games and NFL-run games with configurable views or filters.
- Replace static shift reports with real-time data from existing systems (e.g., SolarWinds, automated scripts).
- Ensure updates are continuous, not snapshot-based.
- Display a summary of stadium certification readiness and punchlist status across all stadiums.
- Include breakdown by game type (club-hosted vs. NFL-run) in readiness overview if applicable.
- Show key contacts or POCs (e.g., "Football Tech Rep: Sarah L. - Available").
- Show real-time health of key systems: Stadium Infrastructure, Network Infrastructure, Football Technology, Paths to AMGC, Broadcast Items (NFL Films status), Closed-Channel Communications Platform, Data Center Temperatures, AD Checks, Microsoft Exchange Checks, VMWare Clusters, SolarWinds Connectivity, Crowdstrike, Rubrik Cloud Security.
- Scrape service windows from providers for key circuits.
- Pull data dynamically from monitoring systems (e.g., SolarWinds) for real-time updates.
- Provide real-time updates on WiFi system health, data system health, and ticketing system health.
- Allow manual refresh option alongside automated updates.
- Toggle between real-time view and historical snapshot.
- Highlight warnings or failures with visual cues (e.g., yellow for warnings, red for critical).
- Send real-time alerts to executives (e.g., "Hawk-Eye Offline - 8:15 AM") via platform or email.
- Enable closed-channel communication setup within the dashboard.
- Allow executives to initiate contact with POCs directly.
- Link to Individual Stadium Dashboard for deeper dives.

Rama's Requirements

- Display a summary of stadium certification readiness and punchlist status across all stadiums.
- Summarize four critical areas (Stadium Infrastructure, Network Infrastructure, Football Technology, Equity Scenario) across all stadiums with percentage complete and status indicators.
- Summarize task progressions by system.
- Show during-game status of system tracking metrics (e.g., GSIS).
- Show during-game status of SVS and coordination with sideline vendors.
- Show status of Electronic Medical Records system(s).
- Show status of all applications supporting the league used during the game.
- Provide key performance metrics: average completion percentage, number of issues/punch list items.
- Display trends over time: recurring failures, consistency patterns.
- Show high-level accountability metrics: teams/individuals responsible, completion percentage, gaps above tactical level.
- Allow viewing of teams that have closed out or left the stadium and systems closed out.
- Generate automated after-game reports, potentially interfacing with GMS.
- Display games overview: what games, what times, and where they happen.
- Show teams arriving on game days (GD-1).
- Provide vendor accountability and activity summary for GD-1 and Game Day.
- Display issues with a game, including who is assigned, and notes/updates tied to checklist items.
- Indicate yellow status for issues not resolved 2 hours before game start; red status for issues not resolved 1 hour before kickoff.
- Sort by ranking criteria (e.g., completion %, issues count) or trends (e.g., most failures).

- Allow drill-down into trends or failures (e.g., click "UPS Failures" to see affected stadiums).

General Application Requirements (Maybe move this to General App Requirements page?)

Security

- NFL: Use a mobile-first system functioning on iOS and Android with Multi-Factor Authentication (MFA) via Okta (internal) and Microsoft Authenticator (external); apply role-based access control (RBAC) with fine-grained (field-level) and coarse-grained (screen-level) permissions; proactively resolve vulnerabilities; ensure game-specific data is private to agents and aggregated data is NFL-only.

Performance

- NFL: Achieve screen-to-screen response times under 50 milliseconds and support at least 100 concurrent users across workflows.

Reliability

- NFL: Maintain 99.9% uptime with no downtime; enable offline tracking with sync capability; incorporate modern fault tolerance, backup, and recovery mechanisms.

Maintainability

- NFL: Design for configurability (e.g., new roles, workflows) with clear documentation, system design, architecture, and modern coding practices; enforce code quality standards with periodic security/risk scans.

Interoperability

- NFL: Consume and provide data via REST endpoints for integrations; ensure seamless iOS/Android functionality with necessary fixes.

Compliance

- NFL: Adhere to industry regulatory standards; support auditing and monitoring of services.

Internationalization

- NFL: Offer multi-language support and comply with local standards, providing metrics per international location.

Critical Dates:

- Updates to Dashboard Drafts: April 3rd, 2025
- Send drafts for review to NFL Leadership: April 4th, 2025
- Follow-up meetings to demo: April 14th-22nd, 2025
- Backlog Entry: April 23-23rd, 2025
- Backlog Refinement: April 25th, 2025
