

NFL STRATEGIC INFRASTRUCTURE & IP PROTECTION FRAMEWORK

Three-Project Delivery Architecture with Annual Certification Dependency

Prepared for the National Football League
By NOVATE Inc. | NOVATELabs | Sentrais Corporation

January 2026

CONFIDENTIAL & PROPRIETARY

Table of Contents

1. Executive Summary

This document establishes the comprehensive infrastructure strategy, intellectual property protection framework, and legal memorandum of understanding for the delivery of three interconnected projects to the National Football League. The architecture ensures NOVATE/Sentrais IP remains protected while creating structural dependency through annual certification requirements.

1.1 Strategic Objectives

- Protect NOVATE/Sentrais proprietary intellectual property through architectural separation and black-box delivery models
- Create structural dependency through annual certification requirements tied to the Sentrais Intelligence Engine
- Deliver three distinct projects through appropriate corporate entities with clear separation of concerns
- Establish the NFL360 model as the unified data framework writing back to CHIMERA

1.2 Project Portfolio Overview

Project	Description	Delivery Entity	CHIMERA Zone
Project 1: GDA Certification & Executive Dashboard	EVERGAME360 production deployment with IT GameDay readiness	Sentrais Inc	Zone 4 (Commercial)
Project 2: Innovation HUB Dashboard & Simulator	Innovation orchestration platform with vendor-neutral testing	NOVATELabs	Zone 3 (Development)
Project 3: Innovation Hackathon System	NFL Draft Innovation Challenge and community programs	NOVATELabs	Zone 2/3 (Research/Dev)

2. Strategic Architecture Framework

2.1 CHIMERA Four-Zone Architecture

The CHIMERA architecture establishes a four-zone corporate structure designed to protect intellectual property, manage the NFL relationship strategically, and position Sentrais for scalable commercialization. Each zone serves a distinct purpose in the value chain.

Zone 1: Resilient Reach (Founder Engine)

Purpose: Founder IP vault, strategic visibility, perpetual protection of core frameworks

Assets: Core frames, NIN methodology, EVERGAME design IP, proprietary algorithms, founder playbooks

Protection Level: Maximum - No external access, no code exposure, perpetual IP protection

Zone 2: NOVATEUS Foundation (Research & Intelligence)

Purpose: 501(c)(3) nonprofit research, community innovation, workforce development, grant-fundable initiatives

Engines: SIGNAL Engine (Emergency/Crisis Intelligence), Innovation Engine (Capability Building)

NFL Touchpoint: NFL Hub Design sits here as research project, enabling FEMA/resilience grant funding

Zone 3: NOVATELabs (Development & Staging)

Purpose: Technical staging, quality assurance, compliance certification, stage-gate to commercialization

Engine: Pentacle Engine - Dev/Staging/Production lifecycle management

NFL Touchpoint: Projects 2 & 3 delivered from this zone with isolated NFL container

Zone 4: Sentrais Inc (Commercial Delivery)

Purpose: Public-facing commercial entity - marketing, business development, client success, revenue generation

Engine: ASIRAP - Governance, contracts, SOWs, partner management, automation

NFL Touchpoint: Project 1 (EVERGAME360) delivered as commercial product with annual certification

2.2 NFL360 Data Framework

All three projects leverage the NFL360 model as the unified data framework, with NIN/Sentrais attributes writing back to CHIMERA. This creates a closed-loop intelligence system where deployment learnings continuously improve the core platform.

Data Flow Architecture

- 1. Project deployments generate operational data within NFL VPC
- 2. Sanitized, aggregated insights flow through secure API to Sentrais-controlled backend
- 3. CHIMERA Evidence Ledger captures decisions, outcomes, and learning insights
- 4. Intelligence scores, anomaly alerts, and predictive insights return to NFL (results only)
- 5. Learning insights feed Zone 2 research for continuous improvement

IP Protection Boundaries

Data Category	NFL Access	NOVATE/Sentrais Retention
Game Day Events	Full ownership	Anonymized patterns only
Intelligence Scores	Results only	Full algorithm ownership
Source Code	Zero access (black box)	Full ownership, perpetual
Model Weights/AI	Zero access	Encrypted, NOVATE-managed keys
NIN Methodology	Benefits from, no documentation	Full IP, covert marketing only

3. Project Specifications

3.1 Project 1: GDA Certification & Executive Dashboard

Delivery Entity: Sentrais Inc (Zone 4 - Commercial)

Product: EVERGAME360 Production Deployment

Scope & Deliverables

- IT GameDay Readiness Platform - Real-time operational intelligence for 32 stadiums
- Executive Readiness Intelligence Dashboard - C-suite visibility into game-day preparedness
- Certification & Compliance Engine - Annual readiness certification with audit trails
- Evidence Ledger Integration - Immutable record of all decisions and outcomes

Annual Certification Dependency Model

The certification model creates structural dependency through three mechanisms:

6. Certification Renewal: Annual recertification requires Sentrais Intelligence Engine validation. Scores, benchmarks, and compliance status are calculated by proprietary algorithms that remain Sentrais IP.
7. Continuous Learning: The Evidence Ledger captures operational learnings that improve certification accuracy. This compounding intelligence creates increasing value that cannot be replicated.
8. Benchmark Evolution: Industry benchmarks evolve based on cross-deployment learnings. NFL benefits from aggregate intelligence while contributing to the knowledge base.

Infrastructure Requirements

Deployment Model: Managed SaaS in NFL VPC

NFL VPC: 10.100.0.0/16 with isolated subnets for application, data, and integration tiers

Sentrais Backend: Air-gapped proprietary systems in NOVATE-controlled AWS account

Communication: HTTPS REST API only with Mutual TLS + API tokens

3.2 Project 2: Innovation HUB Dashboard & Simulator

Delivery Entity: NOVATELabs (Zone 3 - Development/Staging)

Research Link: Feeds NOVATEUS Foundation (Zone 2) for grant eligibility

Scope & Deliverables

- Innovation Intelligence Dashboard - Portfolio visibility across all HUB initiatives
- Vendor-Neutral Testing Harness - Simulation environments for technology evaluation
- Vendor Certification Program - Third-party validation of integration capability
- Cross-Zone Learning Transfer - Insights from pilots feeding ecosystem capability

Innovation Orchestration Framework Integration

Project 2 operationalizes the Innovation Orchestration Framework through four stages:

Stage	Platform Capability	Key Output
Discovery & Validation	Digital simulation environments, POC testing harness	Validated opportunities ranked by deployment readiness
Pilot Operations	Controlled deployment with performance dashboards	Evidence-based pilot assessments, vendor validation
Learning & Integration	Cross-venue learning transfer, benchmark analytics	Validated playbooks, vendor capability profiles
Scale & Certification	Vendor certification engine, innovation credentials	Certified vendors, qualified ecosystem partners

3.3 Project 3: Innovation Hackathon System

Delivery Entity: NOVATELabs (Zone 3) with research data to NOVATEUS Foundation (Zone 2)

Initial Deployment: NFL Draft Innovation Challenge 2026

Scope & Deliverables

- Challenge Intake Platform - Participant submission and evaluation workflow
- Multi-Stage Orchestration Engine - Discovery, Validation, Evaluation, Selection phases
- Community Innovation Portal - Ongoing engagement beyond challenge events
- Think Tank Integration - Ideation sessions feeding innovation pipeline

Hybrid Architecture

Project 3 employs a hybrid approach leveraging existing platform capabilities while preserving NFL strategic differentiation:

- Frontend Intake: Pitchtape for participant-facing submission (planned deprecation by Q4 2026)
- Orchestration Intelligence: NOVATE Sentrais engine for evaluation, scoring, and selection logic
- Research Data Flow: Anonymized innovation patterns feed NOVATEUS Foundation research
- Discovery Insights: Challenge submissions inform Zone 1 strategic intelligence

4. Infrastructure Architecture

4.1 NFL VPC Configuration

All three projects deploy within the NFL VPC with appropriate isolation and security controls. The architecture ensures NFL data sovereignty while enabling secure API communication with Sentrais-controlled backends.

Network Architecture

Subnet Type	CIDR Range	Purpose
Public	10.100.1.0/24, 10.100.2.0/24	ALB, NAT Gateway, Bastion
Private Application	10.100.10.0/24 - 10.100.12.0/24	Dashboard, API, Intelligence tiers
Private Data	10.100.20.0/24, 10.100.21.0/24	RDS, ElastiCache, Data warehouse

Security Controls

- Encryption at Rest: All volumes, databases, S3 buckets using AWS KMS with NFL-managed keys
- Encryption in Transit: TLS 1.3 minimum for all communications
- Access Control: MFA required for all human access, 4-hour maximum sessions
- Monitoring: CloudWatch, CloudTrail, GuardDuty, Security Hub enabled
- Compliance: SOC2 Type II, NIST 800-53, US-only data residency

4.2 Black Box SaaS Model

The proprietary Sentrais systems operate as a black-box SaaS, hosted in a NOVATE-controlled AWS account completely separate from the NFL VPC. This architecture ensures:

- Zero Code Access: NFL receives compiled binaries only, no source code visibility
- Algorithm Protection: Black-box processing with obfuscation and runtime checks
- Model Security: AI/ML weights encrypted with NOVATE-managed keys only
- Results-Only Output: NFL receives intelligence scores, alerts, insights - never source algorithms

5. Governance & Dependency Framework

5.1 Annual Certification Structure

The annual certification model creates sustainable dependency while delivering genuine value to the NFL. Certification renewal requires Sentrais Intelligence Engine validation across multiple dimensions.

Certification Components

Component	Description	Dependency Mechanism
Readiness Scoring	32-stadium operational readiness assessment	Proprietary algorithm in Sentrais backend
Benchmark Analytics	Industry and cross-venue performance comparisons	Aggregate intelligence from cross-deployment learnings
Evidence Chain	Immutable audit trail for compliance and accountability	NOVATE Evidence Ledger technology, patent-protected
Vendor Certification	Third-party vendor integration validation	Vendor-Neutral Harness in NOVATE Labs environment

5.2 Service Level Commitments

Availability: 99.9% uptime SLA (excluding scheduled maintenance)

Support: 24/7 premium support with 15-minute critical response

Maintenance: 4-hour monthly window with 7-day advance notice

Disaster Recovery: 4-hour RTO, 15-minute RPO with cross-region replication

6. Memorandum of Understanding Framework

The following terms establish the legal framework governing the three-project delivery, intellectual property protection, and annual certification dependency.

6.1 Parties and Recitals

This Memorandum of Understanding (MOU) is entered into by:

- National Football League (NFL) - Client organization receiving platform services
- Sentrais Inc - Commercial delivery entity for Project 1 (EVERGAME360)
- NOVATE Labs - Development entity for Projects 2 and 3 (Innovation HUB, Hackathon)
- NOVATE Inc - Parent organization and IP holder

6.2 Intellectual Property Terms

6.2.1 NOVATE/Sentrais Retained IP

The following intellectual property shall remain the exclusive property of NOVATE Inc and its subsidiaries in perpetuity:

- All source code, algorithms, and technical implementations of the Sentrais Intelligence Engine
- The NIN (N-Ovate Innovation Nexus) methodology and all derivative frameworks
- EVERGAME architecture, temporal orchestration engine, and multi-location intelligence
- Evidence Chain authentication and Evidence Ledger technologies
- All AI/ML model weights, training data (anonymized), and predictive algorithms
- The CHIMERA corporate orchestration architecture and zone management systems

6.2.2 NFL Retained IP

The following shall remain the exclusive property of the National Football League:

- All game day operational data generated by NFL operations
- User data and personal information of NFL personnel
- NFL brand assets, trademarks, and marketing materials
- Custom configuration and business rules specific to NFL operations

6.2.3 Black Box Delivery Model

All Sentrais/NOVATE proprietary systems shall be delivered as black-box SaaS services. NFL shall receive:

- API access to intelligence outputs (scores, alerts, insights)
- Dashboard interfaces for operational visibility
- Documentation for API integration and user training

NFL shall NOT receive:

- Source code access or visibility into algorithmic logic
- Direct infrastructure access to Sentrais-controlled systems
- Model weights, training methodologies, or AI/ML internals

6.3 Annual Certification Terms

6.3.1 Certification Requirement

NFL agrees to participate in annual certification renewal administered by Sentrais Inc.

Certification encompasses:

9. Operational Readiness Assessment: Annual evaluation of 32-stadium game-day preparedness using Sentrais Intelligence Engine
10. Compliance Verification: Audit trail validation and evidence chain integrity confirmation
11. Vendor Ecosystem Validation: Annual recertification of third-party integrations through Vendor-Neutral Harness
12. Innovation Maturity Scoring: Assessment of innovation capability building and pilot-to-scale metrics

6.3.2 Certification Benefits

Annual certification provides NFL with:

- Quantified readiness credentials for stakeholder reporting and regulatory compliance
- Benchmark positioning against industry and cross-venue performance standards
- Continuous improvement recommendations based on aggregate intelligence
- Risk mitigation through validated operational playbooks and tested response protocols

6.3.3 Non-Renewal Consequences

In the event NFL elects not to renew annual certification:

- Access to real-time intelligence scores and predictive analytics shall terminate
- Historical data and audit trails shall remain accessible in read-only format for 7 years
- Dashboard interfaces shall revert to static reporting without real-time intelligence
- Vendor certification status for third-party integrations shall lapse

6.4 Data Processing Terms

6.4.1 Data Flow Authorization

NFL authorizes the following data flows between NFL VPC and Sentrais-controlled systems:

- NFL to Sentrais: Sanitized game-day events, system status updates, personnel check-ins
- Sentrais to NFL: Intelligence scores, anomaly alerts, predictive insights, benchmark comparisons

6.4.2 Aggregate Learning Rights

NOVATE/Sentrais retains the right to utilize anonymized, aggregated patterns from NFL deployments to improve platform intelligence. Such utilization shall:

- Never expose NFL-specific operational details or identifiable information
- Contribute to industry benchmark improvements that benefit all platform users
- Feed research activities within NOVATEUS Foundation for grant-funded initiatives

6.5 Commercial Terms

6.5.1 Fee Structure

Component	Monthly	Annual
AWS Infrastructure (NFL-paid)	\$20,000	\$240,000
Platform License (Sentrais)	\$15,000	\$180,000
24/7 Premium Support	\$5,000	\$60,000
Annual Certification Fee	-	\$75,000
TOTAL (Project 1)	\$40,000	\$555,000

Projects 2 and 3 (NOVATELabs delivery) to be scoped and priced separately based on agreed statement of work.

6.6 Term and Termination

Initial Term: Three (3) years from effective date

Renewal: Automatic annual renewal unless terminated with 90-day written notice

Termination for Cause: 30-day cure period for material breach

Data Transition: Upon termination, NFL retains access to historical data for 7 years; all proprietary systems access terminates immediately

7. Signatures

IN WITNESS WHEREOF, the parties have executed this Memorandum of Understanding as of the date last signed below.
