

IT 360 Dashboard

Seasonal Operational Intelligence for NFL IT Leadership

EVERGAME 360 | Powered by Sentrais OS

Version 1.0 | December 2025

Prepared for NFL Executive Leadership

1. Executive Summary

The IT 360 Dashboard provides NFL IT Executives and NFL Leads with comprehensive operational intelligence across the league's annual operating cycle. This dashboard transforms fragmented evidence capture, siloed task ownership, and implicit timelines into a unified command view that enables proactive governance and real-time decision-making.

Strategic Value Proposition

1. **Risk Visibility:** Real-time SLA monitoring across 32 venues with automated breach detection and escalation pathways
2. **Evidence Consolidation:** Replace fragmented WhatsApp communications with governed capture workflows and controlled documentation
3. **Dependency Management:** Machine-readable cross-department task graphs with automated triggers and SLA-driven execution
4. **Seasonal Readiness:** Comprehensive readiness scoring by department, venue, and event aligned to NFL's perpetual operational cycle
5. **Learning Loop:** Year-over-year intelligence growth through institutionalized after-action reviews and continuous model refinement

2. Role-Based Dashboard Views

The IT 360 Dashboard implements strict role-based access controls ensuring appropriate visibility and authority for each stakeholder type.

2.1 IT Executive View

Purpose: Strategic oversight of league-wide IT operations with focus on risk posture, resource allocation, and cross-department dependencies.

Access Level: Read-only strategic intelligence with drill-down to departmental metrics

Dashboard Panel	Executive Intelligence Delivered
Seasonal Readiness Strip	Annual timeline with color-coded readiness scores (0-100) per month; instant visibility into which seasons/events have accumulating risk
SLA Risk Heatmap	Matrix view: Anchor events (columns) × High-impact activities (rows); cell color indicates SLA status with click-through to underlying evidence
Cross-Department Dependencies	Directed graph showing Football Tech → IT → Ops → Events task chains; bottleneck identification with owner accountability
Budget & Resource Tracker	CapEx/OpEx allocation by department with burn rate visualization; procurement milestone tracking against SLA gates
Innovation Pipeline	POC testing candidates, go/no-go decisions, and post-season innovation runway status

2.2 NFL Lead View

Purpose: Operational command and control with full authority for playbook management, evidence validation, and team coordination.

Access Level: Full edit authority for playbooks; exclusive control over task assignments and SLA modifications

Dashboard Panel	Operational Intelligence Delivered
Playbook Management Console	Full CRUD operations on all playbook tasks; version control with semantic versioning; Change Advisory Board workflow integration
Evidence Capture Dashboard	Real-time evidence status by checklist type; validation queues; automated WhatsApp-to-evidence pipeline monitoring
Team Readiness Matrix	GDA assignment tracker; certification status by role; conflict detection (12-18 conflicts/Sunday baseline → target zero)
Venue Operations Hub	32-venue readiness grid with drill-down to individual stadium certification status and active issues
Live Game Operations	M1-M6 milestone progression with T-minus countdown timers; system status across IVRS, C2P, SVS, EFC, HAWKEYE, FTR, WiFi

3. Seasonal Operating Framework

The IT 360 Dashboard aligns with NFL's annual operating cycle, providing season-appropriate views and SLA monitoring tailored to each operational phase.

Season	Core Purpose	Operating Pressure	Dashboard Focus
Offseason (Mar-Jul)	Build, align, certify	Medium pressure, High governance complexity	Budget approval, procurement gates, vendor coordination, requirements gathering
Preseason (August)	Validate, pressure-test	High pressure, High complexity	Hall of Fame Game readiness, POC testing, compliance deadlines, integration validation
Regular Season (Sep-Jan)	Execute, monitor, respond	Very High pressure, Moderate complexity	Weekly game IT support (48h SLA), incident management, international game coordination
Post Season (Jan-Feb)	Elevate, consolidate	Critical pressure, Very High complexity	Super Bowl tech stream, POC testing window, risk assessment, lessons learned integration

4. IT Department SLA Framework

Each SLA is expressed as T-minus X days/hours from an anchor event, enabling dynamic countdown timers and automated breach detection. The dashboard tracks evidence capture status and escalates risks before deadlines.

4.1 NFL IT Core SLAs

Activity	Anchor Event	Target SLA	Criticality
HW/SW Requirements Gathering	Hall of Fame Game	T-60 days	MEDIUM
Integration & Configuration	First Preseason Game	T-14 days	HIGH
Pre-approved POC Testing	First Regular Season	T-14 days	MEDIUM
Weekly Game IT Support	Each Game Kickoff	T-48 hours	HIGH
Post Season POC Testing Window	Super Bowl	T+7 days	LOW
IT Governance & Risk Assessment	Super Bowl	T+14 days	MEDIUM

4.2 IT Events SLAs

Activity	Anchor Event	Target SLA	Criticality
Annual League IT Meeting	Hall of Fame Game	T-120 days	MEDIUM
NFL Draft IT Support	Draft Day	T-7 days	HIGH
GSIS Training	First Regular Season	T-21 days	MEDIUM
Super Bowl Tech Planning Stream	Super Bowl	T-180 days	HIGH
Lessons Learned Workshops	Super Bowl	T+21 days	MEDIUM

5. Game Day Temporal Framework

During Regular Season, the IT 360 Dashboard transitions to game-day mode, displaying milestone progression for all active venues with real-time task completion tracking.

5.1 M1-M6 Milestone System

Milestone	Time Window	Operational Focus	Key Dashboard Metrics
M1	T-48h to T-24h	Pre-Arrival Verification	Asset inventory, travel confirmations, credential verification
M2	T-5h to T-4h	Pre-Game Preparation	EFC CBRS scans, equipment staging, network connectivity
M3	T-4h to T-1h	Systems Validation	C2P/SVS boot sequences, IVRS checks, frequency coordination
M4	T-1h to Kickoff	Final Readiness	Tech field position, final CSQ checks, go/no-go confirmation
M5	Kickoff to Game End	In-Game Operations	System health monitoring, incident response, halftime resets
M6	Game End +1h	Post-Game Review	GMS reports, equipment storage, incident documentation

5.2 System Status Monitoring

The dashboard provides real-time health status for all 9 core technology systems across every active venue:

System	Function	GDA Role
IVRS	Instant Video Replay System - official review operations	Blue Hat
C2P	Coach-to-Player communication system	Orange Hat (C2P Tech)
SVS	Sideline Video System - coach video feeds	Purple Hat
EFC	Equity & Frequency Coordination - CBRS spectrum gatekeeper	Blue Hat (EFC)
HAWKEYE	Ball tracking and officiating technology	Vendor Administrator
FTR	Field Technology Resources - network infrastructure	Gray Hat
WiFi	Stadium wireless connectivity	Venue Tech

6. Executive Key Performance Indicators

The IT 360 Dashboard provides NFL leadership with quantifiable metrics that demonstrate operational efficiency, risk mitigation, and return on investment.

6.1 Operational Efficiency Metrics

1. **Conflict Reduction Rate:** Baseline 12-18 GDA conflicts per Sunday → Target zero through single-assignment enforcement
2. **SLA Compliance Score:** Percentage of activities meeting target deadlines across all departments (target: >95%)
3. **Evidence Capture Rate:** Percentage of required evidence collected within SLA window (target: 100%)
4. **Certification Completion:** Percentage of required staff certified by deadline (target: 100%)
5. **Venue Readiness Index:** Composite score (0-100) by stadium measuring technology, staffing, and certification status

6.2 Risk Mitigation Metrics

1. **SLA Breach Count:** Number of missed deadlines by severity (High/Medium/Low) with trend analysis
2. **Dependency Bottleneck Score:** Identification of cross-department blocking tasks with escalation timing
3. **Incident Resolution Time:** Mean time to resolution for game-day technology issues by system
4. **Risk Exposure Value:** Quantified financial impact of potential SLA breaches and operational failures

6.3 Projected ROI

Value Category	Current State	Target State
Coordination Efficiency	Manual Google Sheets	Automated orchestration
Evidence Capture	Fragmented WhatsApp	Governed workflows
GDA Conflict Rate	12-18 per Sunday	Zero conflicts
Executive Visibility	Ad-hoc reporting	Real-time dashboards
Learning Integration	Manual retrospectives	Automated Sentrais models

7. Integration Architecture

The IT 360 Dashboard integrates with existing NFL systems and the broader EVERGAME 360 ecosystem to provide comprehensive operational intelligence.

7.1 Core System Integrations

- **NFL iOS App:** Mobile access to game-day task lists, evidence capture, and milestone tracking for field technicians
- **UKG Time Tracking:** Automated clock-in/clock-out correlation with task completion for GDA accountability
- **GMS.NFL.NET:** Post-game report submission and compliance documentation
- **WhatsApp Business API:** Transitional evidence capture with automatic routing to governed workflows
- **Vendor Systems (SVS, C2P, IVRS, HAWKEYE):** Real-time telemetry feeds for system health monitoring

7.2 Sentrais OS Integration

The IT 360 Dashboard leverages the Sentrais Intelligence Operating System for:

- **Natural Language Querying:** Executive voice/text queries like 'Show me all venues at risk for this Sunday'
- **Pattern Recognition:** Automated detection of recurring SLA breaches and operational patterns
- **Predictive Analytics:** Risk scoring based on historical data and current readiness status
- **Investigation Assistance:** Drill-down support for root cause analysis during incident review

8. Implementation Roadmap

Phase 1: Foundation (Current)

- Proof-of-concept dashboard with core SLA tracking
- Data schema validation against authoritative spreadsheets
- Role-based access control implementation
- M1-M6 milestone framework integration

Phase 2: Pilot Deployment

- Select stadium implementation (3-5 venues)
- NFL iOS app integration for field technicians
- Evidence capture workflow activation
- Executive dashboard beta access

Phase 3: League-Wide Rollout

- 32-venue deployment with full system integration
- Sentrais OS intelligence features activation
- Cross-department dependency graph implementation
- Learning loop and after-action review automation

Appendix A: Anchor Event Definitions

Anchor Event	Type	Significance
Hall of Fame Game	Preseason	First live game; validates all offseason preparation
First Preseason Home Game	Preseason	Venue-specific readiness validation
First Regular Season Game	Regular Season	Full operational readiness; all systems production-ready
Super Bowl	Post Season	Championship event; peak visibility and complexity

Appendix B: NIN Framework Phases

Every task in the IT 360 system is tagged with a governance phase from the NIN (NOVATELabs Intelligence Network) Framework:

- **Discover:** Clock in, check-in posts, equipment pickup, arrival confirmations
- **Diagnose:** System tests, validations, connectivity checks, hardware verification
- **Design:** Configuration, profile setup, standards application, optimization
- **Deploy:** System activation, live operations, field positioning, game execution
- **Debrief:** GMS reports, equipment storage, incident documentation, clock out
