

FIFA WORLD CUP 2026 - SEAR Readiness Playbook

Powered by Sentrais | Delivered through CiviGrid + eVenu

1. Purpose & Scope

This playbook defines the **standardized SEAR readiness, execution, and escalation model** for **FIFA World Cup 2026 host cities**, venues, and federal partners.

It provides:

- A **repeatable readiness framework** across all host cities
- A **clear division of responsibility** across city, venue, and federal layers
- A **single operational truth** during planning, match execution, and recovery
- A **defensible escalation model** aligned to SEAR-1 and SEAR-2 doctrine

This playbook is **mandatory for all host cities** and **authoritative during SEAR-rated operations**.

2. Operating Model Overview

Sentrais Ecosystem Architecture (Simplified)

Layer	Role
Sentrais OS	Intelligence, orchestration, escalation logic, evidence
CiviGrid	City + multi-agency coordination and SEAR execution
eVenu	Venue + match-level readiness and live operations

This is **one system**, deployed in **modules**.

3. SEAR Framework for World Cup 2026

SEAR Levels in World Cup Context

Level	Meaning
SEAR-2	Elevated risk, multi-agency coordination
SEAR-1	National significance, federal lead

Default posture for World Cup matches:

- **SEAR-2** during planning and pre-match

- **SEAR-1 Ready State** inside T-24
- **SEAR-1 Active** if escalation criteria are met

4. Readiness Lifecycle (Standard Across All Host Cities)

Sentraix enforces a **six-phase readiness lifecycle**.

Phase 1: Strategic Planning (T-180 → T-90)

Lead: Host City

Platform: CiviGrid

Focus:

- Governance setup
- Agency participation confirmed
- Venue onboarding
- Risk baseline established

Key Outputs:

- City readiness baseline
- Agency roster
- Initial SEAR posture

Phase 2: Operational Design (T-90 → T-30)

Lead: Host City + Venue

Platforms: CiviGrid + eVenu

Focus:

- Operational plans finalized
- Venue system mapping
- Transportation and perimeter design
- Staffing models validated

Key Outputs:

- Venue readiness framework
- System ownership defined
- Dependencies mapped

Phase 3: Readiness Validation (T-30 → T-7)

Lead: Venue Ops

Platform: eVenu

Focus:

- Certifications

- System testing
- Evidence collection
- Tabletop and simulations

Key Outputs:

- Verified readiness scores
- Evidence ledger populated
- Gaps identified and assigned

Phase 4: Pre-Match Execution (T-7 → T-24)

Lead: Unified City Operations

Platforms: CiviGrid + eVenu

Focus:

- Milestone execution
- Final system checks
- Escalation readiness
- Federal liaison engagement

Key Outputs:

- SEAR-2 High Readiness posture
- Escalation triggers armed
- Command structures validated

Phase 5: Match Operations (T-24 → Final Whistle)

Lead: Unified Command

Platforms: CiviGrid + eVenu (+ Federal Overlay if triggered)

Focus:

- Live operations
- Incident response
- Decision logging
- Evidence locking (if SEAR-1)

Key Outputs:

- Operational continuity
- Incident resolution
- Federal coordination if required

Phase 6: Recovery & After-Action (T+0 → T+72)

Lead: Host City + FIFA

Platforms: CiviGrid + Sentrais Review

Focus:

- After-Action Review

- Evidence validation
- Improvement actions
- De-escalation approval

Key Outputs:

- AAR
- Compliance artifacts
- Readiness improvements

5. Module Responsibilities

CiviGrid - Host City & SEAR Coordination Module

Primary Users

- Mayor's Office
- OEM / EOC
- Police, Fire, EMS
- Transportation
- Utilities
- Public Health

Core Capabilities

- Multi-agency task coordination
- Operational periods
- Resource readiness
- SEAR posture management
- Escalation orchestration

SEAR-Specific Functions

- Jurisdictional command view
- Unified Command tasking
- Federal liaison integration
- Decision logging

eVenu - Venue & Match Operations Module

Primary Users

- Stadium Ops
- Security
- Technology
- Facilities
- Vendors

Core Capabilities

- Venue readiness scoring
- System health monitoring
- Match milestones
- Evidence submission
- Live match execution

SEAR-Specific Functions

- Perimeter readiness
- Access control validation
- Crowd flow indicators
- Incident escalation to CiviGrid

6. Federal Security Overlay (Conditional)

The **Federal Overlay** is **not always visible**.

It activates only under defined conditions.

When the Overlay Activates

- SEAR-1 escalation triggered
- Federal lead agency assumes command

- Sensitive intelligence gating required

Overlay Capabilities

- Threat and intelligence view
- Unified federal tasking
- Jurisdiction locking
- Immutable evidence ledger
- Federal AAR outputs

This overlay **does not replace CiviGrid or eVenu.**

It **supersedes authority**, not workflows.

7. Escalation Logic (World Cup Specific)

Escalation is governed by:

- Threat intelligence
- Operational degradation
- Jurisdictional complexity
- Time compression

Inside **T-24 to Kickoff**:

- Any critical failure triggers escalation review

- Any credible threat triggers SEAR-1

Inside **Live Match Window**:

- Any qualifying vector → **Immediate SEAR-1**

Rollback requires **explicit federal authorization**.

8. Governance & Accountability

Authority Model

Level	Authority
Tournament	FIFA
City	Mayor / OEM
Venue	Stadium Command
Federal	USSS / DHS

Sentraï enforces:

- Role-based visibility
- Jurisdiction-based authority
- Immutable evidence when required

9. What Success Looks Like

A successful World Cup 2026 operation means:

- No ambiguity in command
- No last-minute surprises
- No unverified readiness
- No undocumented decisions
- No post-event finger-pointing

This playbook ensures:

- Predictability
- Trust
- Defensibility
- Repeatability

10. Deliverables Provided to Each Host City

Each host city receives:

- CiviGrid instance (configured)
- eVenu venue modules
- SEAR escalation overlays

- Readiness dashboards
- AAR and compliance outputs

11. Why This Works

- One operating system
- Modular deployment
- Federal-credible escalation
- City-owned execution
- Venue-level precision
- Global consistency

This is **how you run World Cup 2026 without improvisation.**
