

SIPE VERSION CONTROL & DISCREPANCY TRACKING SYSTEM

Maintaining Source of Truth Across All NOVATE Projects

Classification: NOVATE PROPRIETARY - INTERNAL OPERATIONS

Version: 1.0 | November 23, 2025

PURPOSE

This document establishes the official version control methodology and discrepancy detection protocols for all SIPE-related documentation, ensuring that the innovation playbook engine maintains a single source of truth across multiple conversations, projects, and stakeholders.

PART 1: DOCUMENT VERSIONING STANDARD

Semantic Versioning Convention

All SIPE documents follow **MAJOR.MINOR.PATCH** versioning:

MAJOR.MINOR.PATCH

MAJOR = Breaking changes (methodology shifts, architecture redesign)

MINOR = Feature additions (new playbooks, enhanced modules)

PATCH = Bug fixes, clarifications, minor corrections

Examples:

- SIPE_Core_Architecture_v1.0.md → Initial release
- SIPE_Core_Architecture_v1.1.md → Added new KPI framework
- SIPE_Core_Architecture_v1.1.1.md → Fixed typo in KPI calculation
- SIPE_Core_Architecture_v2.0.md → Complete redesign of self-learning engine

PART 2: MASTER DOCUMENT REGISTRY

Current SIPE Document Inventory (As of November 23, 2025)

Document Name	Version	Release Date	Status	Next Review
SIPE_Core_Architecture	1.0	Nov 23, 2025	ACTIVE	Feb 15, 2026
SIPE_Executive_Implementation_Guide	1.0	Nov 23, 2025	ACTIVE	Feb 15, 2026
SIPE_Version_Control_System	1.0	Nov 23, 2025	ACTIVE	Feb 15, 2026
NFL_Innovation_HUB_Program_Architecture	1.0	Nov 2025	REFERENCE	N/A
NOVATE_Agile_PMO_Framework	[TBD]	[Prior Chat]	HISTORICAL	Superseded by SIPE
Engagement_Lifecycle_Documentation	[TBD]	[Prior Chat]	HISTORICAL	Superseded by SIPE

Document Status Definitions:

- **ACTIVE:** Current source of truth, actively maintained
- **REFERENCE:** External reference material, not NOVATE-controlled
- **HISTORICAL:** Superseded by newer documents, kept for archival purposes
- **DEPRECATED:** No longer valid, scheduled for deletion
- **DRAFT:** Work in progress, not approved for operational use

PART 3: VERSION CONTROL WORKFLOW

Creating a New Version

Step 1: Identify Change Type

- Breaking change (methodology shift) → Increment MAJOR
- New feature/module → Increment MINOR
- Correction/clarification → Increment PATCH

Step 2: Update Document

- Make changes in a new file: `[DocumentName]_v[NEW_VERSION].md`
- Update "Version History" table at end of document
- Add change summary to "Document Control" section

Step 3: Review & Approval

- Draft → Review by relevant stakeholders
- Approval signatures required:
 - MAJOR: CEO + CTO + Program Director
 - MINOR: Program Director + Subject Matter Expert
 - PATCH: Document Owner (can be PM or Lead Engineer)

Step 4: Publication

- Move approved document to `/mnt/user-data/outputs/`

- Update Master Document Registry (this document)
- Archive previous version in /mnt/user-data/archive/
- Notify all stakeholders via Slack + Email

Step 5: Deprecation of Old Version

- Update previous version status to "HISTORICAL"
- Add "SUPERSEDED BY v[NEW_VERSION]" banner to old document
- Maintain old version for 12 months, then archive permanently

PART 4: DISCREPANCY DETECTION SYSTEM

Discrepancy Types & Severity Levels

Type 1: Data Discrepancies (CRITICAL)

Definition: Conflicting factual information across documents

Examples:

- Document A says "6-phase NIN model", Document B says "5-phase NIN model"
- Different KPI definitions for same metric

- Conflicting stage gate criteria

Severity: CRITICAL - Must be resolved within 24 hours

Response: Immediate escalation to Document Owner + Program Director

Type 2: Methodology Discrepancies (HIGH)

Definition: Inconsistent application of NIN framework

Examples:

- Playbook A uses different forensic checklist than Playbook B
- Stage gate process varies between engagements
- Different [Zone] + [Model] + [Phase] tagging conventions

Severity: HIGH - Must be resolved within 3 business days

Response: Document Owner reviews + Standardization task force

Type 3: Terminology Discrepancies (MEDIUM)

Definition: Inconsistent language or naming conventions

Examples:

- "Client Output Engine" vs. "Customer Deliverables System"
- "Churn Prevention Intelligence" vs. "Engagement Risk Management"
- Abbreviations used inconsistently (SIPE vs. Sentrais Innovation Playbook Engine)

Severity: MEDIUM - Resolve in next quarterly review

Response: Add to style guide + Update in next PATCH version

Type 4: Version Discrepancies (MEDIUM)

Definition: Teams using outdated documents or templates

Examples:

- Engagement Lead using v1.0 playbook when v1.2 is current
- Client dashboard references deprecated KPIs
- Training materials cite old stage gate criteria

Severity: MEDIUM - Notify user + Provide current version

Response: Automated version checking in SIPE engine

Type 5: Cross-Project Discrepancies (LOW)

Definition: Inconsistencies in how similar engagements are executed

Examples:

- Project A uses 2-week sprints, Project B uses 3-week sprints (both valid, but inconsistent)
- Different documentation standards across teams
- Varied client communication cadences

Severity: LOW - Discuss in monthly retrospective

Response: Evaluate if standardization needed or if variation is acceptable

PART 5: DISCREPANCY FLAGGING PROCESS

How to Report a Discrepancy

Method 1: SIPE Discrepancy Portal (Preferred - Post-Launch)

1. Navigate to SIPE dashboard → "Report Discrepancy"
2. Select discrepancy type and severity
3. Provide details: Document names, conflicting information, impact assessment
4. Submit → Auto-routes to appropriate owner

Method 2: Slack Command (Immediate Implementation)

- Post in #sipe-discrepancies channel with format:

```
@sipe-bot flag discrepancy
Type: [Data/Methodology/Terminology/Version/Cross-Project]
Severity: [Critical/High/Medium/Low]
Documents: [List document names and versions]
Description: [Detailed explanation of conflict]
Impact: [Who is affected, what is the risk]
```

Method 3: Email (Backup)

- Email to: sipe-discrepancies@novatelabs.com
- Subject: DISCREPANCY - [TYPE] - [SEVERITY]
- Include all details from Slack format above

Discrepancy Resolution SLAs

Severity	Response Time	Resolution Time	Escalation
CRITICAL	2 hours	24 hours	CEO if not resolved
HIGH	8 hours	3 business days	Program Director
MEDIUM	24 hours	1 week	Next quarterly review
LOW	1 week	Next monthly retro	No escalation needed

PART 6: CROSS-CHAT & CROSS-PROJECT TRACKING

Tracking Changes Across Conversations

Challenge: NOVATE operates across multiple Claude chats, Google Docs, Sentrais projects, and client engagements. How do we ensure consistency?

Solution: Centralized Change Log

Master Change Log Structure

Location: /mnt/user-data/change-logs/SIPE_Master_Change_Log.csv

Columns:

- Change_ID (auto-generated UUID)

- Date_Recorded
- Source_Chat_ID (if from Claude conversation)
- Source_Project_ID (if from Sentrais)
- Document_Affected
- Version_Before
- Version_After
- Change_Type (MAJOR/MINOR/PATCH)
- Change_Description
- Author
- Approver
- Status (Proposed/Approved/Implemented/Rejected)

Example Entry:

CHG-2025-11-001, 2025-11-23, claude-chat-xyz123, PROJ-NFL-HUB-001, SIPE_Core_Architecture, 1.0, 1.1, MINOR, Added cloud spend optimization module, Claude AI, Tye (CEO), Implemented

Cross-Chat Continuity Protocol

When Starting a New Chat:

1. Reference latest document versions from Master Document Registry
2. State: "I am continuing work on SIPE v[X.Y.Z] as documented in [previous chat/document]"
3. Ask: "Are there any updates or changes to the SIPE architecture since last conversation?"

4. Validate: Cross-check any discrepancies against Master Change Log

When Resuming Work on Existing Project:

1. Load: Retrieve latest versions of all relevant documents
2. Compare: Check for version drift between local files and Master Registry
3. Flag: Report any discrepancies immediately
4. Sync: Update to latest versions before proceeding

PART 7: SOURCE OF TRUTH HIERARCHY

When conflicts arise, this is the official precedence order:

Tier 1: Authoritative Sources (Highest Priority)

1. **SIPE Core Architecture** (latest version) - Methodology and framework definitions
2. **Sentra's Evidence Ledger** - Historical engagement data and outcomes
3. **Approved Client Contracts** - Scope, deliverables, legal commitments

Tier 2: Operational Sources

4. **SIPE Playbooks** (latest versions) - Execution guidance

5. **Engagement Deliverables** (approved by client) - Project-specific documentation
6. **Internal Training Materials** - Team knowledge and competency standards

Tier 3: Reference Sources

7. **External Frameworks** (SAFe, NIST, etc.) - Industry best practices
8. **Prior Chat Logs** - Historical context and decision rationale
9. **Client Communications** - Emails, Slack messages, meeting notes

Conflict Resolution Rule: If Tier 1 source contradicts Tier 2 or 3, Tier 1 wins. If Tier 2 sources conflict, escalate to Program Director. If Tier 3 sources conflict, refer to Tier 1 or 2 for clarification.

PART 8: VERSION CONTROL TOOLING

Recommended Tools for SIPE Version Management

Document Management:

- **Primary:** Google Docs with version history enabled
- **Code/Templates:** GitHub with semantic versioning tags
- **Collaboration:** Notion for cross-team documentation

- **Archival:** AWS S3 with lifecycle policies (retain 12 months)

Discrepancy Tracking:

- **Immediate:** Slack #sipe-discrepancies channel with bot integration
- **Formal:** Jira tickets for HIGH/CRITICAL discrepancies
- **Analysis:** Tableau dashboard showing discrepancy trends over time

Change Management:

- **Proposals:** Google Forms for change requests
- **Approvals:** DocuSign for formal sign-offs
- **Communication:** Slack + Email for stakeholder notifications
- **Audit Trail:** All changes logged in Sentrais Evidence Ledger

PART 9: QUARTERLY REVIEW PROCESS

Version Control Health Check (Every 90 Days)

Week 1: Document Audit

- [] Review all ACTIVE documents for accuracy and relevance
- [] Identify documents requiring MAJOR/MINOR updates
- [] Archive HISTORICAL documents >12 months old

- ☐ Update Master Document Registry

Week 2: Discrepancy Analysis

- ☐ Review all discrepancies from past quarter
- ☐ Identify patterns (recurring issues, root causes)
- ☐ Recommend process improvements
- ☐ Update style guide and standards

Week 3: Cross-Project Consistency Check

- ☐ Compare methodologies across 5 random engagements
- ☐ Flag any deviations from standard playbooks
- ☐ Validate [Zone] + [Model] + [Phase] tagging accuracy
- ☐ Interview delivery teams about pain points

Week 4: Version Control Report & Roadmap

- ☐ Present findings to SIPE Steering Committee
- ☐ Propose document updates and deprecations
- ☐ Get approval for Q+1 version control roadmap
- ☐ Communicate changes to all stakeholders

PART 10: AUTOMATION OPPORTUNITIES

Future State: Intelligent Version Control

Phase 1: Automated Version Detection (Q2 2026)

- SIPE engine scans all documents for version numbers
- Alerts users if accessing outdated content
- Provides link to latest version automatically

Phase 2: Discrepancy Auto-Detection (Q3 2026)

- Natural language processing scans documents for conflicting statements
- Flags potential discrepancies for human review
- Suggests resolutions based on Source of Truth Hierarchy

Phase 3: Self-Healing Documentation (Q4 2026)

- When CRITICAL discrepancy detected, auto-generates patch
- Creates change request for Program Director approval
- Implements approved change and notifies all stakeholders

Phase 4: Predictive Version Management (2027)

- Machine learning predicts when documents will become outdated
- Recommends proactive updates before discrepancies arise
- Optimizes review cycles based on document change velocity

PART 11: TRAINING & ONBOARDING

New Team Member Onboarding (Version Control Module)

30-Minute Training:

1. **Introduction to SIPE Version Control** (10 min)
2. Why version control matters for engagement quality
3. Overview of semantic versioning
4. Master Document Registry walkthrough
5. **Hands-On: Finding Latest Versions** (10 min)
6. Exercise: Locate latest version of 3 key documents
7. Practice: Check document status and next review date
8. Tool demo: Accessing archived versions
9. **Discrepancy Detection & Reporting** (10 min)
10. Case studies: Examples of each discrepancy type
11. Practice: Submit mock discrepancy via Slack
12. Q&A: What to do if you find conflicting information

Certification: Pass quiz with 80% accuracy (10 questions)

Ongoing: Monthly "Version Control Tip" in team newsletter

PART 12: CONTINUOUS IMPROVEMENT METRICS

KPIs for Version Control System Effectiveness

Metric 1: Discrepancy Detection Rate

- **Formula:** Discrepancies Found / Total Documents Reviewed
- **Target:** >5% (proactive finding indicates healthy vigilance)
- **Red Flag:** <2% (suggests poor detection or low awareness)

Metric 2: Discrepancy Resolution Time

- **Formula:** Average time from flag to resolution
- **Target:** <SLA for each severity level
- **Red Flag:** >2x SLA consistently

Metric 3: Version Drift Incidents

- **Formula:** # of times team used outdated version causing issues
- **Target:** <1 per quarter
- **Red Flag:** >3 per quarter (indicates poor communication)

Metric 4: Document Freshness

- **Formula:** % of ACTIVE documents reviewed within last 90 days
- **Target:** >80%
- **Red Flag:** <60% (suggests stale documentation)

Metric 5: Cross-Project Consistency Score

- **Formula:** $(\text{Consistent Applications} / \text{Total Applications}) \times 100$
- **Target:** >90%
- **Red Flag:** <75% (indicates methodology drift)

PART 13: EMERGENCY PROCEDURES

CRITICAL Discrepancy Protocol

Scenario: A CRITICAL data discrepancy is discovered that affects active client engagements.

Immediate Actions (Within 2 Hours):

1. **STOP:** Pause all affected engagements immediately
2. **ALERT:** Notify CEO, CTO, Program Director via emergency Slack channel
3. **ASSESS:** Determine scope of impact (how many clients/engagements affected)
4. **CONTAIN:** Prevent further use of incorrect information

Resolution Actions (Within 24 Hours):

5. **INVESTIGATE:** Root cause analysis (who, what, when, why)
6. **CORRECT:** Update all affected documents with correct information

7. **VALIDATE:** Third-party review to ensure correction is accurate
8. **COMMUNICATE:** Inform all stakeholders (internal + clients if needed)

Post-Incident Actions (Within 1 Week):

9. **DOCUMENT:** Full incident report in Evidence Ledger
10. **PREVENT:** Implement controls to prevent recurrence
11. **TRAIN:** Conduct emergency training on lessons learned
12. **AUDIT:** Review all similar documents for potential similar issues

Example Incident Report Template:

INCIDENT: CRITICAL-DISCREPANCY-2025-11-001
Date Discovered: [Date]
Discovered By: [Name]
Discrepancy Type: Data - Conflicting KPI definition for "Stage Gate Pass Rate"
Documents Affected: SIPE_Core_Architecture_v1.0,
Playbook_INCUBATION-CHALLENGE-P2_v1.1
Engagements Impacted: 3 active engagements (NFL Innovation HUB,
Client X, Client Y)
Root Cause: Document A used "first-time approvals" while Document B
included "approvals after re-submission"
Correction: Updated all documents to use "first-time approvals only"
as standard definition
Prevention: Added KPI glossary as appendix to all playbooks;
automated cross-reference checking in next SIPE release
Incident Owner: [Program Director]
Status: RESOLVED (2025-11-24 at 3:47 PM)
Lessons Learned: Need centralized KPI definition document to prevent
future ambiguity

APPENDIX A: DOCUMENT TEMPLATES

Template: Version Control Banner (Add to Top of All Documents)

```
# [DOCUMENT TITLE]
**Version**: [X.Y.Z]
**Status**: [ACTIVE/HISTORICAL/DRAFT/DEPRECATED]
**Release Date**: [Date]
**Next Review**: [Date]
**Superseded By**: [Link to newer version if HISTORICAL]

**Document Control**:
- **Classification**: [Public/Internal/Proprietary/Restricted]
- **Owner**: [Name/Role]
- **Approvers**: [Names of required sign-offs]
- **Location**: [File path or URL]

**Change Log**: See Appendix [X] for full version history
```

Template: Change Request Form

```
# SIPE CHANGE REQUEST

**CR-ID**: [Auto-generated]
**Submitted By**: [Name]
**Date Submitted**: [Date]
**Priority**: [High/Medium/Low]

**Affected Documents**:
- [Document 1 Name], v[X.Y.Z]
- [Document 2 Name], v[X.Y.Z]
```

****Change Type**:** [MAJOR/MINOR/PATCH]

****Description of Change**:**
[Detailed explanation of what needs to change and why]

****Business Justification**:**
[Why is this change necessary? What problem does it solve?]

****Impact Assessment**:**

- ****Engagements Affected**:** [Number and names]
- ****Teams Affected**:** [List teams]
- ****Timeline Impact**:** [Any schedule changes]
- ****Cost Impact**:** [Any budget implications]

****Proposed Solution**:**
[Specific changes to be made]

****Alternatives Considered**:**
[Other options evaluated and why they were rejected]

****Approval Status**:**

- [] Document Owner
- [] Program Director
- [] CEO (if MAJOR change)

****Implementation Plan**:**
[Steps to roll out change once approved]

****Rollback Plan**:**
[How to undo change if issues arise]

APPENDIX B: GLOSSARY OF VERSION CONTROL TERMS

Active Document: Current, approved version serving as operational source of truth

Archival: Process of moving old versions to long-term storage after 12-month retention

Deprecation: Official notice that a document is no longer valid and scheduled for removal

Discrepancy: Conflict or inconsistency between two or more documents or implementations

Evidence Ledger: Sentrais-based immutable audit trail of all decisions and changes

Historical Document: Superseded version kept for reference but no longer operationally used

Master Registry: Central inventory of all SIPE documents with version and status tracking

MAJOR Version: Breaking change requiring full methodology review and executive approval

MINOR Version: Feature addition or enhancement that doesn't break existing implementations

PATCH Version: Bug fix, clarification, or minor correction with minimal impact

Semantic Versioning: MAJOR.MINOR.PATCH numbering convention for tracking changes

Source of Truth: Authoritative document or data source used to resolve conflicts

Version Drift: Unintended divergence when teams use different document versions

DOCUMENT CONTROL & VERSION HISTORY

Version: 1.0

Release Date: November 23, 2025

Classification: NOVATE PROPRIETARY - INTERNAL OPERATIONS

Document Owner: Program Director

Next Review Date: February 15, 2026

Version History:

Version	Date	Author	Changes	Approval
1.0	Nov 23, 2025	Claude (NOVATE AI)	Initial version control system	Pending

Approval Signatures:

- ☐ CEO (Tye) - Strategic approval
- ☐ Program Director - Operational approval
- ☐ CTO - Technical approval

Distribution List:

- NOVATE Executive Team (Full Access)
- Engagement Leads (Read + Report Discrepancies)
- Project Managers (Read + Report Discrepancies)

- Delivery Teams (Read Only)

END OF DOCUMENT

This version control system is designed to evolve with SIPE. As the engine learns and improves, so too will our documentation standards and discrepancy detection capabilities. Quarterly reviews ensure continuous improvement and adaptation to emerging needs.

Questions? Contact the Program Director or submit via #sipe-discrepancies Slack channel
