Description

As a League Admin, I want to associate a venue with an event during event creation or editing, so that I can ensure each game is linked to the correct stadium for accurate readiness tracking and filtering by GDAs.

Acceptance Criteria:

- The event creation interface ([EGD-46](#) NOT STARTED) includes a mandatory field to select a venue from a dropdown list of all managed venues (Epic Venue Management: Create and Manage Venues).
- The event editing interface ([EGD-47](#) NOT STARTED) allows updating the associated venue, with the current venue pre-selected in the dropdown.
- The dropdown list displays venue names (e.g., "MetLife Stadium") and is populated dynamically from the venues managed in the system.
- If no venues are available (e.g., none have been created), the system displays a message: "No venues available. Please create a venue first," and prevents event creation until a venue is selected.
- Only users with the "Create Event" or "Edit Event" permission (Epic User Management and Permissions) can associate venues with events.
- Upon saving the event, the system validates that a venue is selected; if not, it displays an error message: "Venue is required."
- The associated venue is visible in the event details view ([EGD-19](#) NOT STARTED) and can be used for filtering games by stadium.
- The system logs the user who associated the venue with the event, including the timestamp, for auditing purposes.
