

SENTRAIS

The Intelligence Operating System
for High-Stakes Environments.

Orchestrating readiness, response, and recovery where failure is not an option.

The Coordination Crisis: Complexity Compounds Risk

Chaos Map

**Financial
Leakage**

\$75k per 15-min
operational overrun

**Catastrophic
Failure**

\$51M damages
(Atlanta Ransomware)

**Security
Waste**

\$2B+ Spend w/
no unified layer

Inefficiency

8 hours to create
manual ICS forms

Introducing Sentrais: The Operational Intelligence OS

See (Ingestion)

Unified operational picture
across all agencies.

Predict (SIPE Engine)

Model risks 3-5 days before
they become crises.

Perform (Orchestration)

Execute with confidence
and automated evidence.

The Methodology: NIN (NOVATE Intelligence Network)

Transforming 18-month enterprise deployments into 3-5 month operational outcomes.

Traditional Approach:
18-24 Months | High Risk | Slow Value

Sentrais NIN Approach:
3-5 Months | 70% Lower Risk | Phase 1 Value

Operational Blueprinting: Digitizing Organizational DNA

Blueprinting is the forensic process of transforming static artifacts into a living digital ecosystem. We map people, processes, and systems to create a high-fidelity digital twin.

Ecosystem Mapping	Gap Analysis	Simulation Design
Stakeholder interviews & system inventory.	Identifying notification gates and blind spots.	Defining inject points for emerging tech.

Orchestration & Sequencing: The Temporal Framework

Synchronizing decision cycles from T-minus planning through to Post-Event closeout.

7-Milestone Framework

Temporal Sync Agent: Bridges disjointed clocks—aligning stakeholders who think in minutes (Emergency Ops) with those who think in years (Regulatory/Policy).

System Architecture: The Six-Layer Stack

Layer 6: Evidence Ledger

Immutable Audit Trail, AAR Generation, Compliance

Layer 5: Runtime Intelligence

Real-time Dashboards, Situational Awareness

Layer 4: Business Logic

ICS/NIMS Workflows, ESF Triggers, Declaration Logic

Layer 3: Modeling

Hazard Models, Lifeline Impact, Resource Readiness

Layer 2: Processing

Normalization, Deduplication, Temporal Alignment

Layer 1: Ingestion

IoT, WebEOC, GIS, Weather, API Gateways

Resilience Engine

Focus

Emergency response, incident management

Innovation Engine

Focus

Tech pilots, evaluation, learning transfer

The Evidence Ledger: Automated Accountability

Calm requires accountability. Sentrais does not just execute; it records. The **Evidence Ledger** creates an immutable audit trail for compliance, insurance, and improvement.

FEMA / Government	Insurance / Risk	After-Action Review
Automates ICS Forms 201-214. Supports Stafford Act declaration documentation.	Proves 'Reasonable Care' to reduce liability exposure (e.g., 18% reduction in insurance costs).	Auto-generates AARs based on timestamped logs of decisions and alerts.

Metric: Automated compliance reduces liability exposure by \$3.2M annually and prevents 89% of violations.

Vertical Application: Sports & Entertainment (EVERGAME)

Validated by the NFL. League-wide intelligence across 32 clubs.

Vertical Application: National Resilience & Infrastructure

From Blue Sky Readiness to Gray Sky Response.

The FEMA Mission

- Multi-Agency Coordination
- Lifeline Resilience Index
- Automated ICS/NIMS orchestration

The Ecosystem: Two Engines, One Mission

Value Proposition: Calm is Designed

Traditional Approach
Reactive decision-making, fragmented tools (Excel/WhatsApp), manual reporting, “hoped-for” coordination
Sentrais Approach
Predictive modeling, unified Intelligence OS, automated evidence ledger, “orchestrated” outcomes.

SPEED	RISK	OUTCOME
5x Faster Time to Value	70% Lower Implementation Risk	Operations that cannot fail

We do not just build software. We engineer resilience.

SENTRAIS

The Intelligence Operating System.
