

Sentrais Innovation Engine: Pattern B (Read-Only NFL Portal in AWS)

Single-page operating diagram and AWS-facing API surface for security review.

AWS API for Security Review (Read-Only)

- Principle: AWS portal never writes to Sentrais. All endpoints are GET-only and scoped by ecosystem_id and role claims.
- Auth: AWS IAM (SigV4) between API Gateway and GCP ingress OR mTLS + OAuth2 client credentials. User auth via AWS IAM Identity Center (SAML) mapped to role claims.
- Transport: TLS 1.2+ end-to-end. Optional IP allowlist on GCP load balancer plus AWS WAF on portal.
- Data minimization: Return only derived dashboard fields and evidence summaries. No raw applicant PII unless explicitly required and approved.

Core Read-Only Endpoints (v1)

Endpoint	Method	Purpose	Key Controls
/v1/ecosystems	GET	List ecosystems user can view	RBAC, tenant scoping
/v1/ecosystems/{id}/status	GET	Roll-up readiness, pipeline health, stage	Cacheable, ETag
/v1/ecosystems/{id}/submissions	GET	Submission list (summary fields)	Field-level filtering
/v1/ecosystems/{id}/submissions/{sid}	GET	Submission detail (read-only)	PII redaction policy
/v1/ecosystems/{id}/scores	GET	Score distribution, top vendors	No model internals exposed

/v1/ecosystems/{id}/stage-gates	GET	Gate timeline + decisions (read-only)	Evidence link required
/v1/ecosystems/{id}/evidence/summary	GET	Evidence completeness totals + missing flags	Defensibility status
/v1/ecosystems/{id}/reports	GET	Generated reports index	Signed URLs
/v1/ecosystems/{id}/reports/{rid}	GET	Fetch report metadata + download link	Time-bound signed URL
/v1/ecosystems/{id}/audit/trail	GET	Audit trail entries (paged)	Immutable IDs, pagination

Eventing and Intake (Pitchtape Transitional)

Pitchtape continues to capture applicant submissions and emits webhook events to GCP ingestion. NFL portal does not consume Pitchtape directly.

Webhook receiver (GCP): /v1/intake/pitchtape/webhooks (POST) is owned by NOVATE operations. This endpoint is NOT reachable from the NFL AWS portal network path.
