

Guideline for File and Color Usage

Once you've received the files necessary to elevate your brand to the next level, it's important to consider some technical aspects. This guideline contains essential recommendations for using the provided files. Following these tips will help avoid color accuracy issues, ensure quick loading times, and maintain high quality.

→ File Types

for web

for print

.AI

The AI format is created using Adobe Illustrator and is a vector format. This means the file can be scaled to any size without losing quality. This is where the logo was designed, and print shops may request this file.

.JPG

JPG is a raster format most commonly used for photos and images with gradients. Quality can be lost when the file is compressed. However, it can be used for web pages if a transparent background is not needed.

.EPS

EPS is a vector format that can be opened in most graphic design programs. It is used for professional printing and also allows for scaling without loss of quality. Print shops often request this format for printing.

.PNG

PNG is a raster format that supports transparency, allowing the logo to look good on any background. It's ideal for web use and situations requiring a transparent background, like watermarks on images.

.PDF

PDF is a universal format that preserves the quality and structure of the document. It can be used for both printing and file sharing. This format is convenient for sending the logo to partners or for placing it on a website.

.SVG

SVG is a format specifically designed for use on the internet. SVG files maintain high image quality and have a small file size, which allows web pages to load quickly. It is ideal for placing the logo on web pages.

→ Color Models

for web

for print

CMYK

CMYK is a color model used for printing. If your project is intended for print, such as business cards or brochures, use CMYK.

RGB

RGB is a color model used for digital screens like computers, smartphones, and TVs. Use RGB if your project will be displayed on a screen.

PANTONE

Pantone is a color matching system that helps ensure colors are consistent across different materials. Use Pantone when you need colors to be the same everywhere, like for logos or brand styles. Be sure to consult with your printer before printing a Pantone color.
