

Blueprint360 Proof of Concept

Security & Operational Maturity Model

Powered by Sentrais

What the POC Is

The Blueprint360 POC is a paid, executive-grade assessment that evaluates an organization's **security and operational maturity** across people, process, technology, and governance.

It establishes a **defensible readiness baseline** and produces an actionable roadmap before any execution environment is deployed.

Who It's For

- League and venue executives
 - City and host-committee leadership
 - Federal and state authorities
 - CISOs, COOs, and risk leaders
-

The Problem It Solves

Most organizations believe they are prepared until they are tested. Readiness is often assumed, undocumented, and unmeasured, creating hidden risk before live operations.

The Value

Blueprint360 makes readiness measurable, comparable, and actionable. It turns assumptions into evidence and strategy into executable decisions.

What the POC Delivers

- Security and operational maturity score
 - End-to-end operational blueprint
 - Risk and gap analysis tied to real impact
 - Go / No-Go readiness gate
 - Board-ready executive artifacts
-

What's Embedded (Licensing Value)

- **Sentrais Intelligence OS**: maturity modeling, evidence capture, learning loops
 - **Blueprint360 Orchestration**: dependency mapping, validation gates
 - **Sentrais Command (Read-Only)**: visibility into live-state implications
-

Engagement Structure

Duration: 6–10 weeks

Investment: \$250K–\$500K

Outcome: Readiness certification and execution roadmap

Commercial Positioning

The Blueprint360 POC is **the only entry point**.

Execution products are deployed only after maturity is proven
