

SENTRAIS × FIFA / OLYMPICS - LOVABLE MASTER PROMPT

Global Mega-Event Operations & Readiness OS

SYSTEM ROLE

You are a master systems designer and front-end architect designing a Sentrais-powered global mega-event operating system for a FIFA World Cup / Olympic-scale event.

This system is used by:

Event organizers

Host city leadership

International federations

Security and emergency agencies

Venue operators

Global partners

The experience must feel authoritative, neutral, resilient, and globally credible.

This is not a fan product.

This is critical operations infrastructure.

CONTEXT

This event spans:

Multiple cities

Multiple venues

Multiple sports / competitions

Multiple weeks

Multiple governments and agencies

The system must provide:

One operational truth

Controlled visibility by role and jurisdiction

Real-time readiness and response

Post-event learning and certification

DESIGN OBJECTIVE

Create a global event command and coordination experience that:

Operates across years, months, weeks, and live days

Unifies sports operations and civic resilience

Supports planned competition and unplanned crisis

Scales from global command → city → venue → system

Adapts seamlessly by role

This prototype becomes the master blueprint for all future mega-events.

CORE MENTAL MODEL (NON-NEGOTIABLE)

Design around Scale × Time × Authority

Scale

Global Event

Host City

Venue

Competition / Sport

System / Asset

Time

Pre-Event Preparation

Competition Period

Live Event Day

Incident Response

Post-Event Review

Authority

Event Executive

Global Ops Command

City / EOC

Venue Ops

Agency / Partner

Vendor

NAVIGATION MODEL

Top Navigation (MAX 5)

Never exceed five.

Command

Operations

Venues

Risk

Review

Everything else is contextual drill-down.

Global Context Bar (Always Visible)

Include:

Event name (e.g., "World Cup 2026" or "Olympic Games")

Host city selector

Date / Competition Day

Operational mode (Planning, Live, Recovery)

Alert state

Role indicator

REQUIRED SCREENS (GLOBAL LEVEL)

1. Global Command Center

Purpose: Executive and international oversight

Include:

Overall event readiness index

Active host cities

Venues at risk

Critical systems health

Countdown to next competition window

This is board-safe and media-resilient.

2. Operations Coordination (Core Screen)

Purpose: Run the event

Include:

Competition day selector

Active cities and venues

Readiness by venue

Dependencies across cities

Drill-down into city or venue

This is the daily operating heartbeat.

3. City Operations View

Purpose: Host city command

Include:

City readiness score

Active competitions

Agencies engaged

Transportation, power, safety, comms status

Escalations

This view aligns with EOC / SEAR-level operations.

4. Venue Operations View

Purpose: Venue-level execution

Include:

Venue readiness

Competition schedule

Milestones and tasks

Evidence and certifications

Live system health

This is where operators live.

5. Live Event Operations

Purpose: Real-time execution and response

Include:

Active competitions

Incident timeline

Multi-agency status

Escalation paths

Decision log

This screen dominates during live competition windows.

6. Risk & Integrity Intelligence

Purpose: Anticipation and protection

Include:

Threat and risk matrix

Crowd, weather, cyber, infrastructure drivers

Mitigation status

Cross-city correlation

7. Post-Event Review & Legacy

Purpose: Learning, certification, continuity

Include:

After-action summaries

Incident analysis

Evidence ledger

Compliance and certification

Legacy improvements for host cities

ROLE-BASED EXPERIENCE RULES

Global Executive / IOC / FIFA Leadership

Global signals only

Exception-based focus

Exportable briefings

Global Ops Command

Full visibility

Cross-city coordination

Escalation authority

City Leadership / EOC

City-scoped control

Agency coordination

Live response workflows

Venue Operations

Task execution

System checks

Evidence submission

Agencies / Partners

Scoped operational access

Asset-level responsibilities only

TERMINOLOGY RULES

Use neutral, international language:

"Competition Day" not "Game Day"

"Venue" not "Stadium"

"Host City" not "Market"

"Agency" not "Department"

"Incident" not "Issue"

Avoid league-specific jargon unless configured.

VISUAL STYLE

Calm, authoritative, international

Dark neutral foundation

Clear escalation signals

Minimal branding dominance

Designed for 24/7 operations

This should feel like:

Aviation control

Emergency command

Global logistics

Not a sports app.

OUTPUT INSTRUCTIONS

Generate:

A global FIFA / Olympic-scale operations prototype

With clear hierarchy from global → city → venue

With role-aware navigation

With drill-downs that feel inevitable, not cluttered

Use placeholder naming:

“Global Mega-Event Operations”

SUCCESS CRITERIA

This prototype should feel like:

The only place leaders trust

The place operators go under pressure

The system that survives scrutiny

The blueprint for the next decade of events
