

SIPE VISUAL ARCHITECTURE REFERENCE

Executive Presentation & Stakeholder Communication Guide

Version: 1.0 | November 23, 2025

Purpose: Visual representations of SIPE for presentations, training, and client communications

1. THE BIG PICTURE: SIPE AT A GLANCE

WHAT IT DOES
VALUE DELIVERED

HOW IT WORKS

• Predicts churn before 30% churn reduction - it happens 5-8x ROI in Year 1 • Automates playbook - Consistent delivery - generation - Faster onboarding • Enforces forensic - Audit-ready - rigor - Client trust • Protects core IP - Competitive moat - while optimizing - Vendor independence • Monetizes intelligence \$300K-\$1M new revenue - through upsell - Recurring income	• Self-learning ML models • 72 standardized playbooks • Evidence Ledger + Stage Gates • Zero-knowledge architecture • NIN Analytics - trigger system
---	---

2. THREE-LAYER INTELLIGENCE ARCHI- TECTURE

- All engagement data (tagged by Zone + Model + Phase)
- Historical performance metrics (KPIs, outcomes, lessons learned)
- Client information (sanitized for privacy)
- Methodology documentation (playbooks, templates, frameworks)
- External knowledge (SAFe, NIST, Lean Six Sigma, consulting firms)

3. THE NIN 6-PHASE ENGAGEMENT MODEL (With SIPE Integration)

PHASE 1: DISCOVERY & FRAMING

- └ Activities: Stakeholder mapping, market research, intake workshop, define KPIs
- └ SIPE Role: Auto-generate project template, baseline KPIs, stakeholder matrix
- └ Churn Risk: LOW
- └ Stage Gate: Problem validated by 3+ stakeholders, research complete
- └ Sentrais Tag: [ZONE]-[MODEL]-P1

PHASE 2: BLUEPRINTING (NIN Forensics) ⚠ CRITICAL CHURN ZONE

- └ Activities: Systems mapping, workflow forensics, risk assessment, opportunity ID
- └ SIPE Role: Churn prediction model ACTIVE, automated compliance checks
- └ Churn Risk: CRITICAL - 60% of engagement delays happen here
- └ Stage Gate: 95%+ forensics accuracy, all HIGH risks mitigated, executive checkpoint
- └ Intervention: Automated alerts if Requirements Ambiguity >20 or Alignment <85%
- └ Sentrais Tag: [ZONE]-[MODEL]-P2

PHASE 3: CO-DESIGN & INNOVATION ⚠ HIGH CHURN ZONE

- └ Activities: Innovation labs, impact/feasibility mapping, pilot concept scoping
- └ SIPE Role: Innovation coefficient tracking, technical feasibility validation
- └ Churn Risk: HIGH - Design complexity management critical
- └ Stage Gate: 3+ concepts evaluated, selected concept >80% feasibility, resources committed
- └ Intervention: Design review if complexity exceeds threshold or timeline compresses >20%
- └ Sentrais Tag: [ZONE]-[MODEL]-P3

PHASE 4: PILOT & TESTING

└ Activities: Pilot launch, feedback loops, performance dashboards, Go/No-Go decision

└ SIPE Role: Real-time pilot performance tracking, automated reporting

└ Churn Risk: MEDIUM - Pilot failure management and pivoting required

└ Stage Gate: Statistical significance achieved, decision made with evidence

└ Sentrais Tag: [ZONE]-[MODEL]-P4

↓

PHASE 5: OPERATIONALIZATION

└ Activities: Integration into tech/business stack, training, scaled blueprint

└ SIPE Role: Integration testing automation, adoption tracking

└ Churn Risk: LOW - Clear deliverables phase

└ Stage Gate: <5% critical defects, 60%+ user adoption in 30 days, handoff complete

└ Sentrais Tag: [ZONE]-[MODEL]-P5

↓

PHASE 6: MEASUREMENT & ITERATION

└ Activities: KPI tracking vs. baseline, continuous reporting, lessons learned

└ SIPE Role: Self-learning engine ingests data, playbook refinement

└ Churn Risk: NEGLIGIBLE - Value delivery phase

└ Stage Gate: All KPIs documented, capability transfer validated, retrospective done

└ Sentrais Tag: [ZONE]-[MODEL]-P6

↓

[ENGAGEMENT COMPLETE]

compliance,		P5: Playbook		P5: Playbook		P5: Playbook
long-term support		P6: Playbook		P6: Playbook		P6: Playbook

PRIORITY DEVELOPMENT SEQUENCE:

→ First 4 (Months 1-2): INCUBATION-CHALLENGE-P2, TRANSFORMATION-CHALLENGE-P2,

INCUBATION-COCREATE-P3, TRANSFORMATION-COCREATE-P3

→ Next 8 (Months 3-4): High-volume engagement playbooks

→ Remaining 60 (Months 5-12): Full matrix coverage, 5-6 playbooks per month

5. CHURN PREVENTION INTELLIGENCE (Focus: Diagnose/Design)

PHASE 2: BLUEPRINTING (Diagnose) ⚠ CRITICAL ZONE

CHURN DETECTORS	ALERT THRESHOLDS
• Requirements Ambiguity Score >40	Alert if >20, Escalate if >40
• Stakeholder Availability Variance if >40%	Alert if >25%, Escalate if >40%
• Scope Stability Score <70	Alert if <85, Escalate if <70
• Decision Bottleneck Index Escalate if >5	Alert if >3 delays, Escalate if >5

↓

AUTOMATED INTERVENTIONS
Alert (1 detector triggered) → Engagement Lead notified
Warning (2+ detectors) → Executive checkpoint scheduled
Critical (high risk score) → Client escalation with mitigation plan
Imminent Churn (multiple crits) → Formal reset workshop or pause

PHASE 3: CO-DESIGN/INNOVATION HIGH ZONE

CHURN DETECTORS	ALERT THRESHOLDS

• Technical Feasibility Confidence if <65%	Alert if <80%, Escalate
• Timeline Compression if >25%	Alert if >15%, Escalate
• Resource Allocation Gaps	Alert if unfilled >7 days
• Client Engagement Frequency Escalate >35%	Alert if decline >20%,

↓

AUTOMATED INTERVENTIONS	
Complexity Alert	→ Design simplification workshop
Timeline Warning reduction	→ Resource augmentation or scope
Resource Gap	→ Emergency staffing request
Client Disengagement	→ Executive sponsor activation

OUTCOME: 30% reduction in engagement churn (Target for Year 1)

6. STAKEHOLDER OUTPUT ENGINES (What Each Group Sees)

CONTINUOUS LEARNING MODULES

- Post-engagement retrospectives
- Competency gap identification
- Best practice extraction
- Certification pathways

ARCHITECTURE TEAM OUTPUT ENGINE (ATOE)

"Efficiency Without Exposing Core Secrets"

EFFICIENCY OPTIMIZATION REPORTS (Quarterly)

- Cloud spend analysis & cost reduction
- Performance bottlenecks
- Tech stack rationalization
- Scalability improvement paths

SECURITY ARCHITECTURE ASSESSMENTS

- Zero-trust compliance exposure
- Encryption standards review readiness
- Third-party risk
- Incident response

VENDOR INDEPENDENCE ROADMAPS

- Lock-in risk by system alternatives
- Migration pathways strategies
- Open-source
- Interoperability

⚠ CORE SECRET PROTECTION: All inputs pass through zero-knowledge layer

7. SELF-LEARNING ENGINE MECHANICS

CONTINUOUS LEARNING LOOP

"The Engine Gets Smarter Every Day"

STEP 1: DATA INGESTION (Real-Time + Batch)

- All engagement data (Sentrais Evidence Ledger)
- Stage gate outcomes and timing
- KPI performance actuals
- Retrospective insights and lessons learned
- External framework updates (SAFe, NIST, etc.)

↓

STEP 2: PATTERN RECOGNITION (ML-Based)

- Churn prediction modeling (identify early warning signs)
- Success factor correlation analysis (what makes engagements succeed)
- Efficiency optimization identification (where can we save time/resources)
- Risk pattern clustering (common failure modes)

↓

STEP 3: PLAYBOOK REFINEMENT (Automated + Human Review)

- Playbook updates (version control, change proposals)
- Best practice codification (successful tactics become standard)
- Stage gate criteria optimization (adjust thresholds based on data)
- KPI threshold adjustments (calibrate to reality)

↓

STEP 4: RECOMMENDATION ENGINE (Real-Time Guidance)

- Predictive alerting to delivery teams (churn, risk, opportunity)
- Efficiency suggestions (faster/cheaper ways to deliver)
- Quality enhancement recommendations (improve outcomes)
- Real-time course corrections (pivot when needed)

↓

STEP 5: FEEDBACK & VALIDATION (Human-in-the-Loop)

- Delivery team feedback on recommendations (useful? accurate?)
- Client satisfaction with new approaches
- Outcome validation (did predictions come true?)
- Model accuracy monitoring (continuous improvement)

↓

[LOOP BACK TO STEP 1]
(Engine continuously improves)

LEARNING RATE: Quarterly major updates, monthly minor refinements,
daily predictions

8. 90-DAY IMPLEMENTATION TIMELINE (Visual)

SIPE IMPLEMENTATION ROADMAP

"From Zero to Operational in 90 Days"

MONTH 1: FOUNDATION

MONTH 2: INTELLIGENCE

MONTH 3: OPTIMIZATION

● CRITICAL: Client Z - Blueprinting phase, Requirements Ambiguity Score = 45 → Recommendation: Schedule executive alignment workshop within 48 hours	
● WARNING: Client X - Stakeholder attendance dropped 35% last 2 weeks → Recommendation: Executive sponsor reactivation, check engagement level	

FINANCIAL PERFORMANCE		THIS
QUARTER		
NIN Analytics Revenue		\$45K ▲
+\$15K vs Q		
Churn-Saved Revenue (Estimated)		\$125K ▲
+\$50K vs Q		
Efficiency Gains (Capacity Equivalent)		\$50K ▲
+\$20K vs Q		
Total SIPE Value Contribution		\$220K ▲
+\$85K vs Q		

PLAYBOOK DEVELOPMENT STATUS	72
Total	

SIPE in 2 Minutes

"Traditional consulting relies on individual expertise and tribal knowledge—what happens when that expert leaves? SIPE codifies our entire methodology into a self-learning system. It tracks real-time KPIs, predicts churn before it happens (especially in high-risk Diagnose and Design phases), and automatically guides teams through proven playbooks. Clients get transparency through NIN Analyzer dashboards, our teams get predictive alerts to avoid problems, and our architecture team gets efficiency recommendations without exposing core IP. ROI is 5-8x in Year 1 through churn reduction, efficiency gains, and new NIN Analytics revenue."

SIPE in 5 Minutes

[Use Visual Architecture diagrams from this document + KPI Dashboard mockup]

1. **The Problem** (1 min): Engagement churn costs us \$500K+/year, inconsistent delivery confuses clients, and scaling requires proportional headcount growth.
2. **The Solution** (2 min): SIPE is a three-layer intelligence system—Foundation (Sentrais data core), Intelligence (ML models + automation), and Presentation (stakeholder-specific dashboards). It predicts problems, automates playbooks, and learns continuously.
3. **The Implementation** (1 min): 90-day roadmap from foundation to full operation. Week 1 quick wins (version control, churn assessment), Month 1 milestone (4 critical playbooks + team trained), Month 3 milestone (self-learning engine active).

4. **The Value** (1 min): \$150K investment generates \$1M+ value in Year 1. Beyond ROI, SIPE creates competitive moat—no other firm has this level of intelligence. Enables scaling without proportional hiring. Client trust through evidence-based transparency.

DOCUMENT CONTROL

Version: 1.0

Release Date: November 23, 2025

Classification: NOVATE PROPRIETARY - PRESENTATION MATERIALS

Purpose: Visual reference for executive presentations, training, and stakeholder communication

Usage Guidelines:

- Internal presentations: Use all sections
- Client presentations: Use only Section 3 (NIN model) and Section 6 (Client outputs) - redact all internal references
- Board/investor presentations: Use Sections 1, 2, 8, 9 with CEO approval
- Training materials: Use Sections 3, 4, 5, 6, 7 as reference

Next Review: February 15, 2026

END OF VISUAL REFERENCE GUIDE
