

The background of the entire image is a light blue architectural wireframe of a large stadium, viewed from an elevated, slightly angled perspective. The stadium's structure, including its seating tiers, internal support beams, and roof framework, is rendered in thin blue lines. The stadium is surrounded by other building outlines and infrastructure lines, also in a wireframe style, creating a sense of a complex urban or event environment.

SENTRAIS

The Operating Standard.

Redefining global venue resilience by
transforming chaos into certified readiness.

SERIES A INVESTMENT MEMORANDUM

Venues and Cities are Operating Blind

When seconds count, fragmented systems lead to delayed responses, risking lives, reputation, and revenue.

THE FRAGMENTATION TRAP

THE COST

\$2.1B+

ANNUAL REVENUE LEAKAGE

- 73% of venues have no unified view of operations.
- Rely on 14+ disconnected systems.
- \$2M–\$4M average annual loss per venue due to sprawl and fines.

Three Market Forces Creating Immediate Demand

The old methods aren't just inefficient; they are now uninsurable and non-compliant.

The Insurance Crisis

- Premiums up **40%**.
- Venues need certification to reduce measurable risk profiles.

Federal Mandates

- Expanding DHS SEAR requirements make compliance non-negotiable.
- Non-compliance carries severe penalties and reputational risk.

The AI Gap

- Venues want AI but lack the data infrastructure.
- Sentrais acts as the "AI-Ready" data layer, preparing venues for the future of security.

Context: Post-pandemic operations demand lean, resilient systems that traditional staffing cannot support.

Sentrais Intelligence OS: From Chaos to Certified Resilience

Replacing reactive chaos with predictive intelligence.

Unified Command Architecture

Key Capabilities

Cyber-Physical Fusion: Real-time correlation of cyber events to physical infrastructure.

Strategic Implication

Establishes Sentrais as the go-to partner for mega-events including FIFA World Cup 2026 and Olympics 2028.

Why We Win: A Category-Defining Moat.

1. Proprietary Data

4 years of live NFL data. Generic AI cannot replicate this context.

2. Methodology

Crisis-proven **NIN Forensics** workflow and specialized operational protocols.

3. Certification Authority

We set the standard (eVenu) that others must meet. We define what "ready" means.

4. Network Effects

As more venues join, the benchmarking data becomes smarter. The SIPE Engine learns from every event, creating a winner-take-all dynamic.

Built by the Authority on Resilience.

TYE HAYES
Founder & CEO

THE ARCHITECT

Visionary behind the nation's most complex secure environments. Architect of NFL Innovation.

REAL-WORLD COMMAND

Personally managed resilience for 4 NFL Super Bowls. Led the NCICC Command (40+ agency cyber command).

ORIGIN STORY

Tye lived the fragmentation problem firsthand and built Sentrais as the orchestration solution she needed while managing high-stakes city and sporting operations.
