

Sentra's Entertainment OS

Enterprise Operational
Orchestration for the
Live Event Industry.

Calm during chaos.
Making the complex simple.

Clarifying the Platform Reality

	Consumer Entertainment OS (Sky/Comcast)	Sentrais Entertainment OS
Primary Function	Media consumption & Live TV 	Manages and connects all parts of a live event, using reliable data. 
Infrastructure	Closed television ecosystem 	Built on a secure, intelligent, and automated cloud platform. 
Sources	HDMI inputs & streaming apps (Netflix) 	Connects data from sensors, tickets, and other business tools. 
Target Audience	General television viewers 	Event Executives and Venue Managers. 

Sentrais is the central hub that brings all your event data together, making it easy to understand and act on.

A \$200B Ecosystem Operating in a Coordination Void

The live entertainment industry produces 55,000+ major events annually without a shared data standard. The reliance on 2,000+ fragmented point solutions means critical risk data rarely reaches decision-makers in time.

The Catastrophic Cost of Coordination Failure

\$280M+

**Astroworld
Litigation Precedent**

Massive exposure due to defensibility gaps and analog communication failures.

\$50M

**Indiana State
Fair Collapse**

A direct result of fragmented weather tracking and ambiguous authority protocols.

+15%

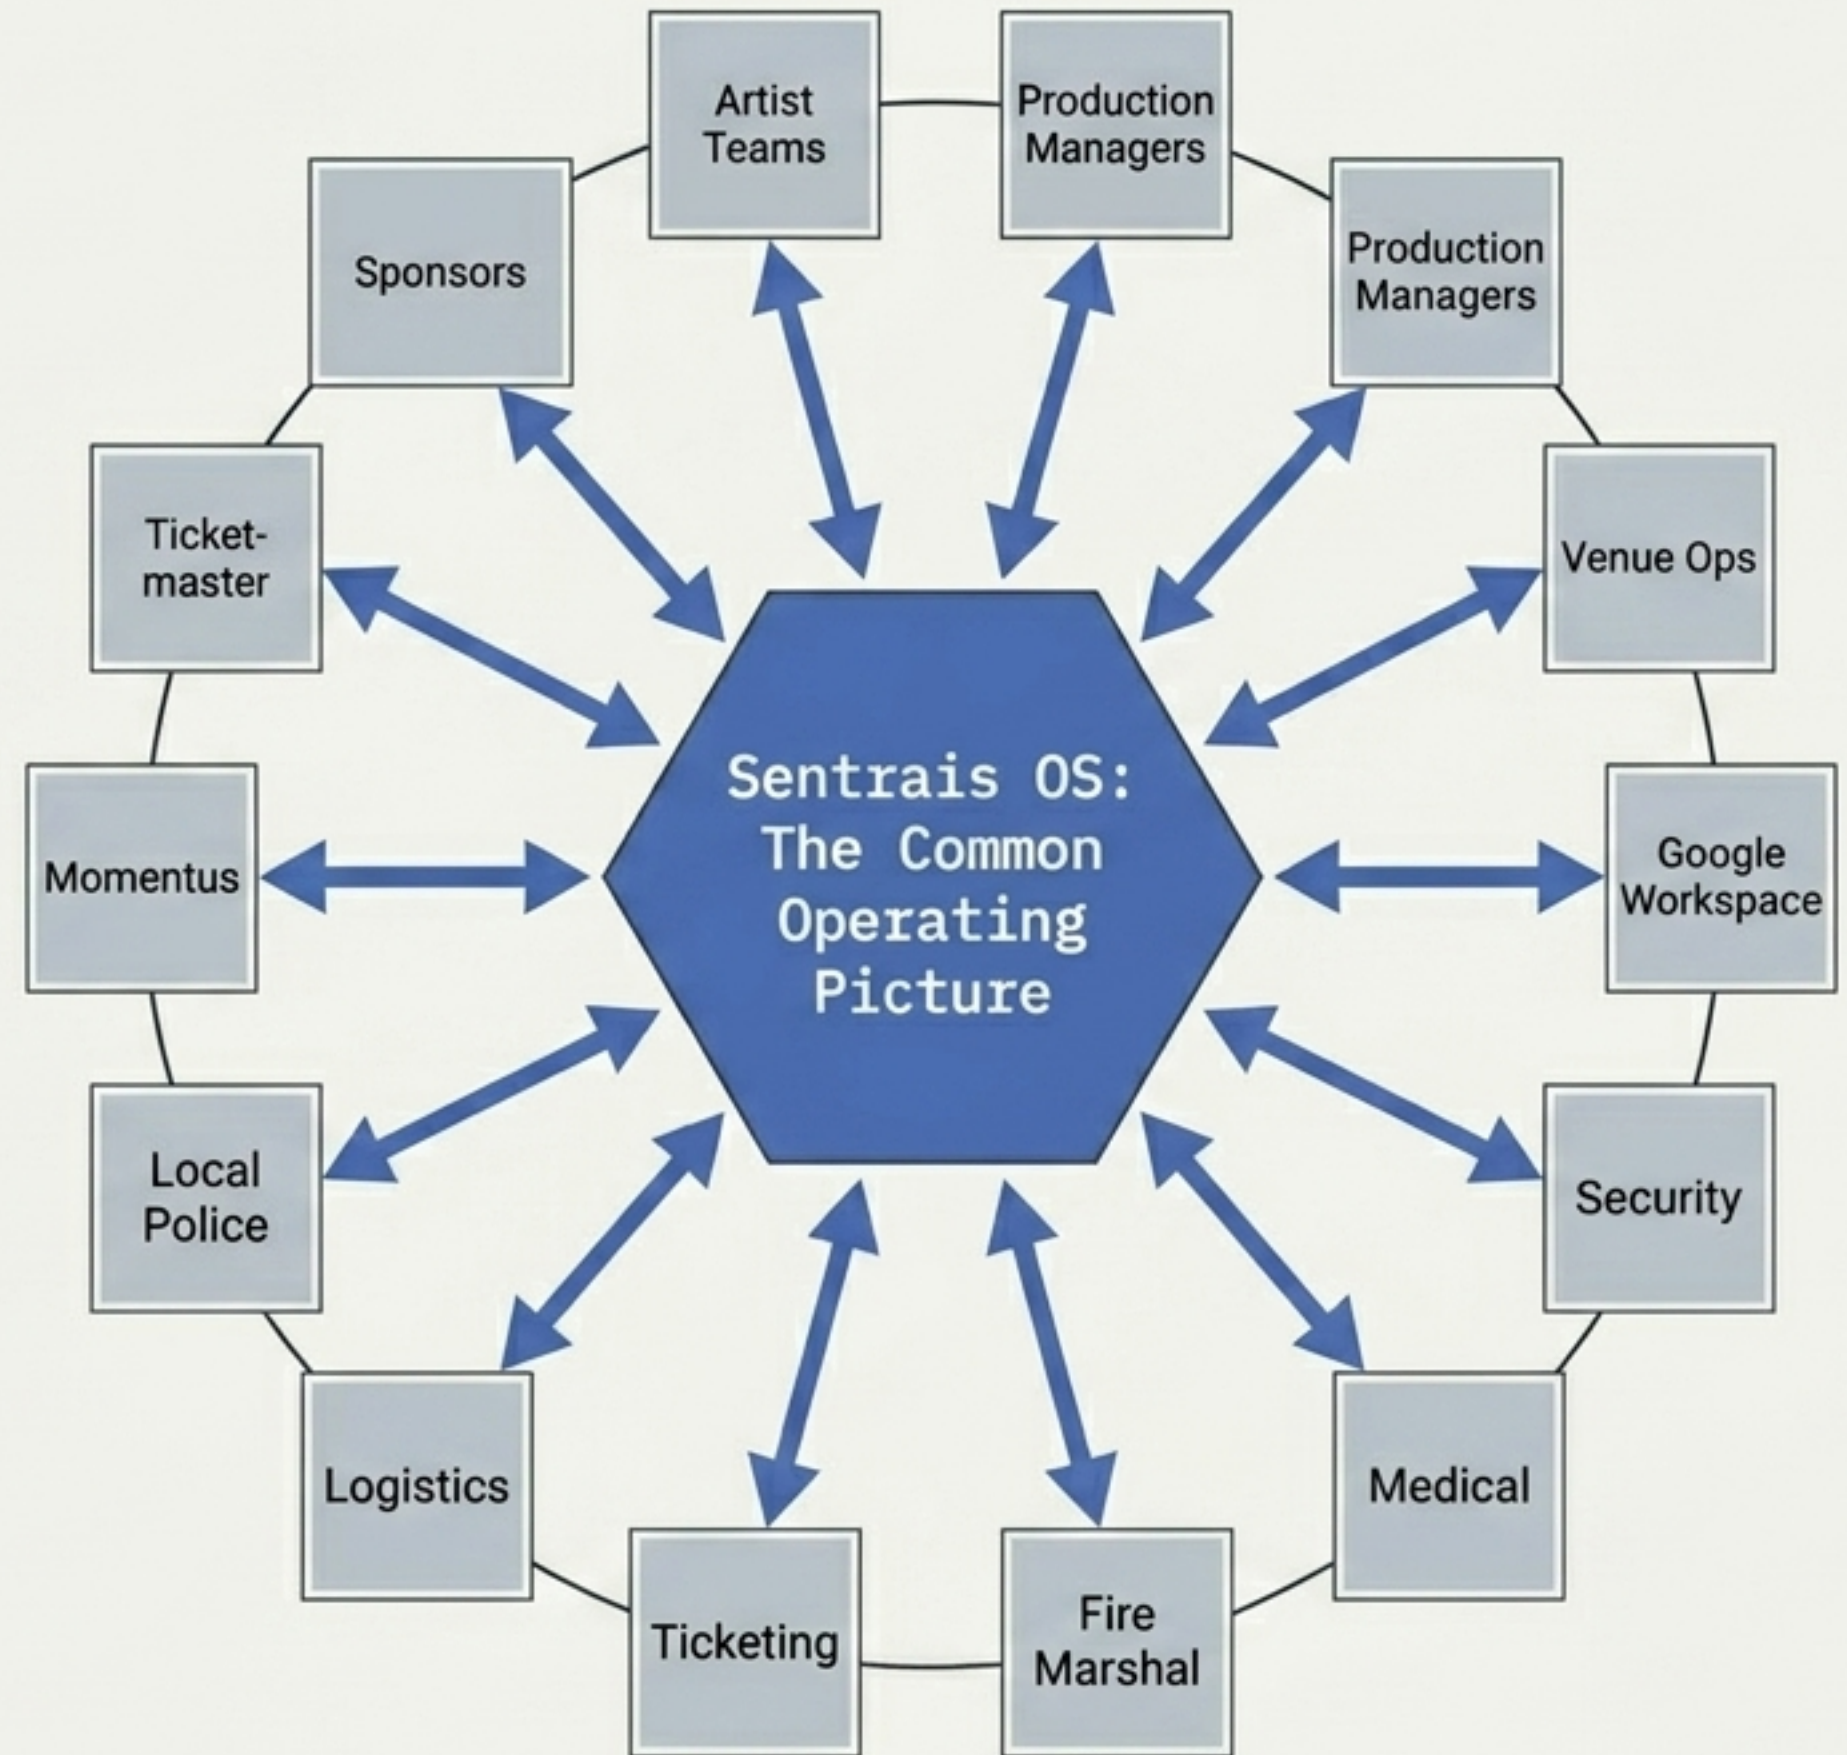

Annual Burn Rate

Year-over-year insurance premium hikes driven by unmanaged operational risk.

Supporting Metric: +24% increase in unplanned staff overtime since 2022 due to predictive scheduling failures.

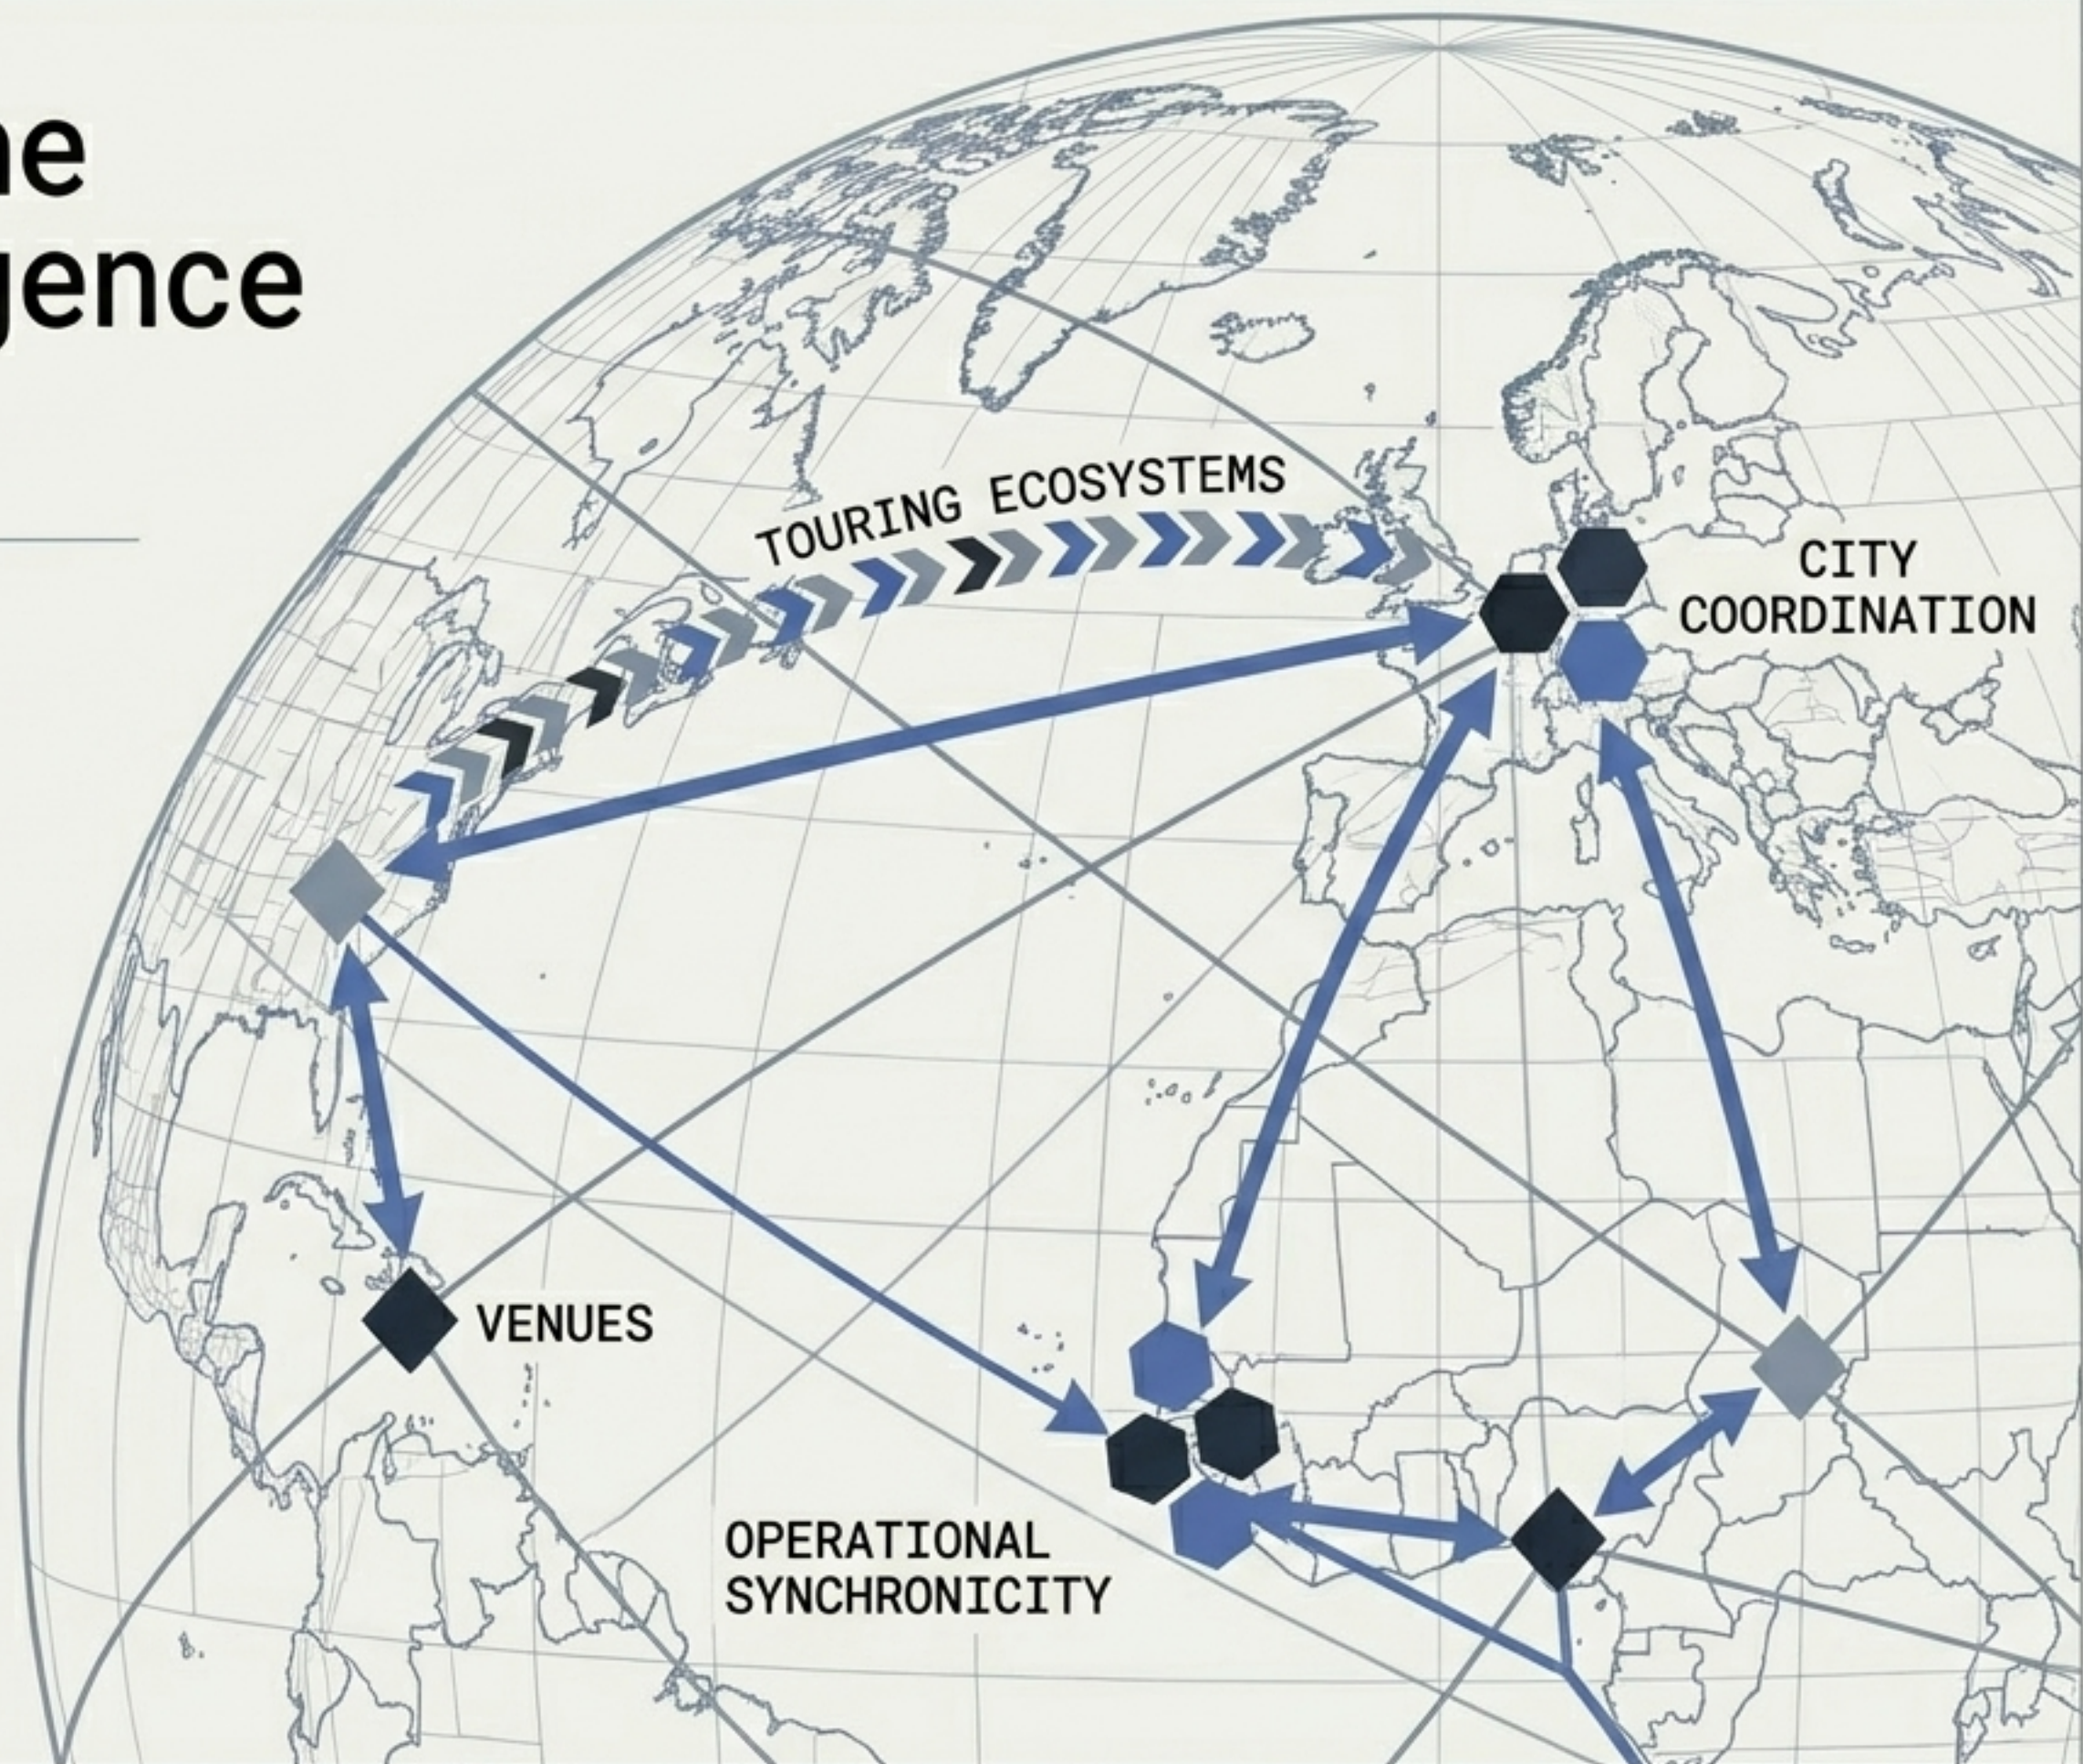

The Connective Tissue for Global Events

Sentra is does not replace ticketing or vendor tools; it sits above them. By ingesting data via API integration, it transforms subjective, analog panic into automated, digital operational intelligence.

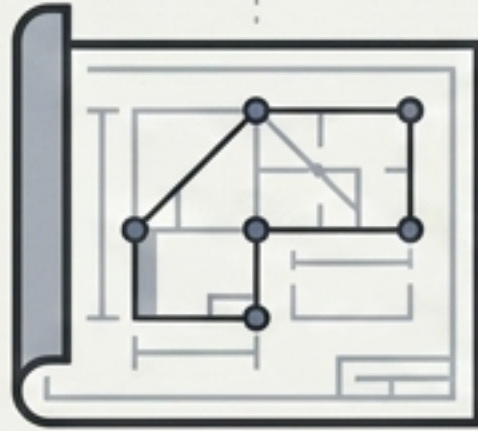

SpectraGrid: The Global Intelligence Infrastructure

The vertical deployment of Sentrais for live entertainment. SpectraGrid acts as the enterprise control tower, mapping the full operational blueprint of a show across multiple cities, vendors, and venues. When a global tour moves from an amphitheater to an arena, intelligence adapts automatically.

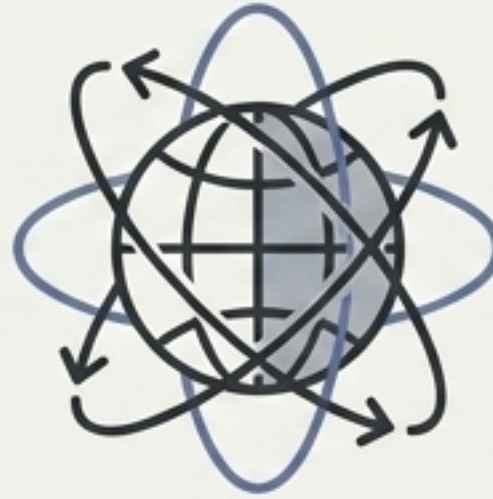

Ecosystem Synchronization Modules

1. Event Blueprint Engine

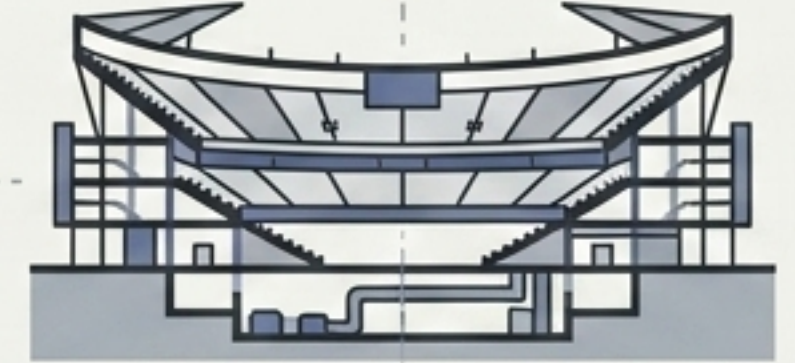

Maps the full operational structure, authority chains, and dependencies of any event. Establishes the foundational logic for the physical space.

→ Operational Synchronicity ←

2. Production Intelligence

Coordinates global touring logistics, rider requirements, and staging dependencies. Synchronizes moving pieces before they arrive on-site.

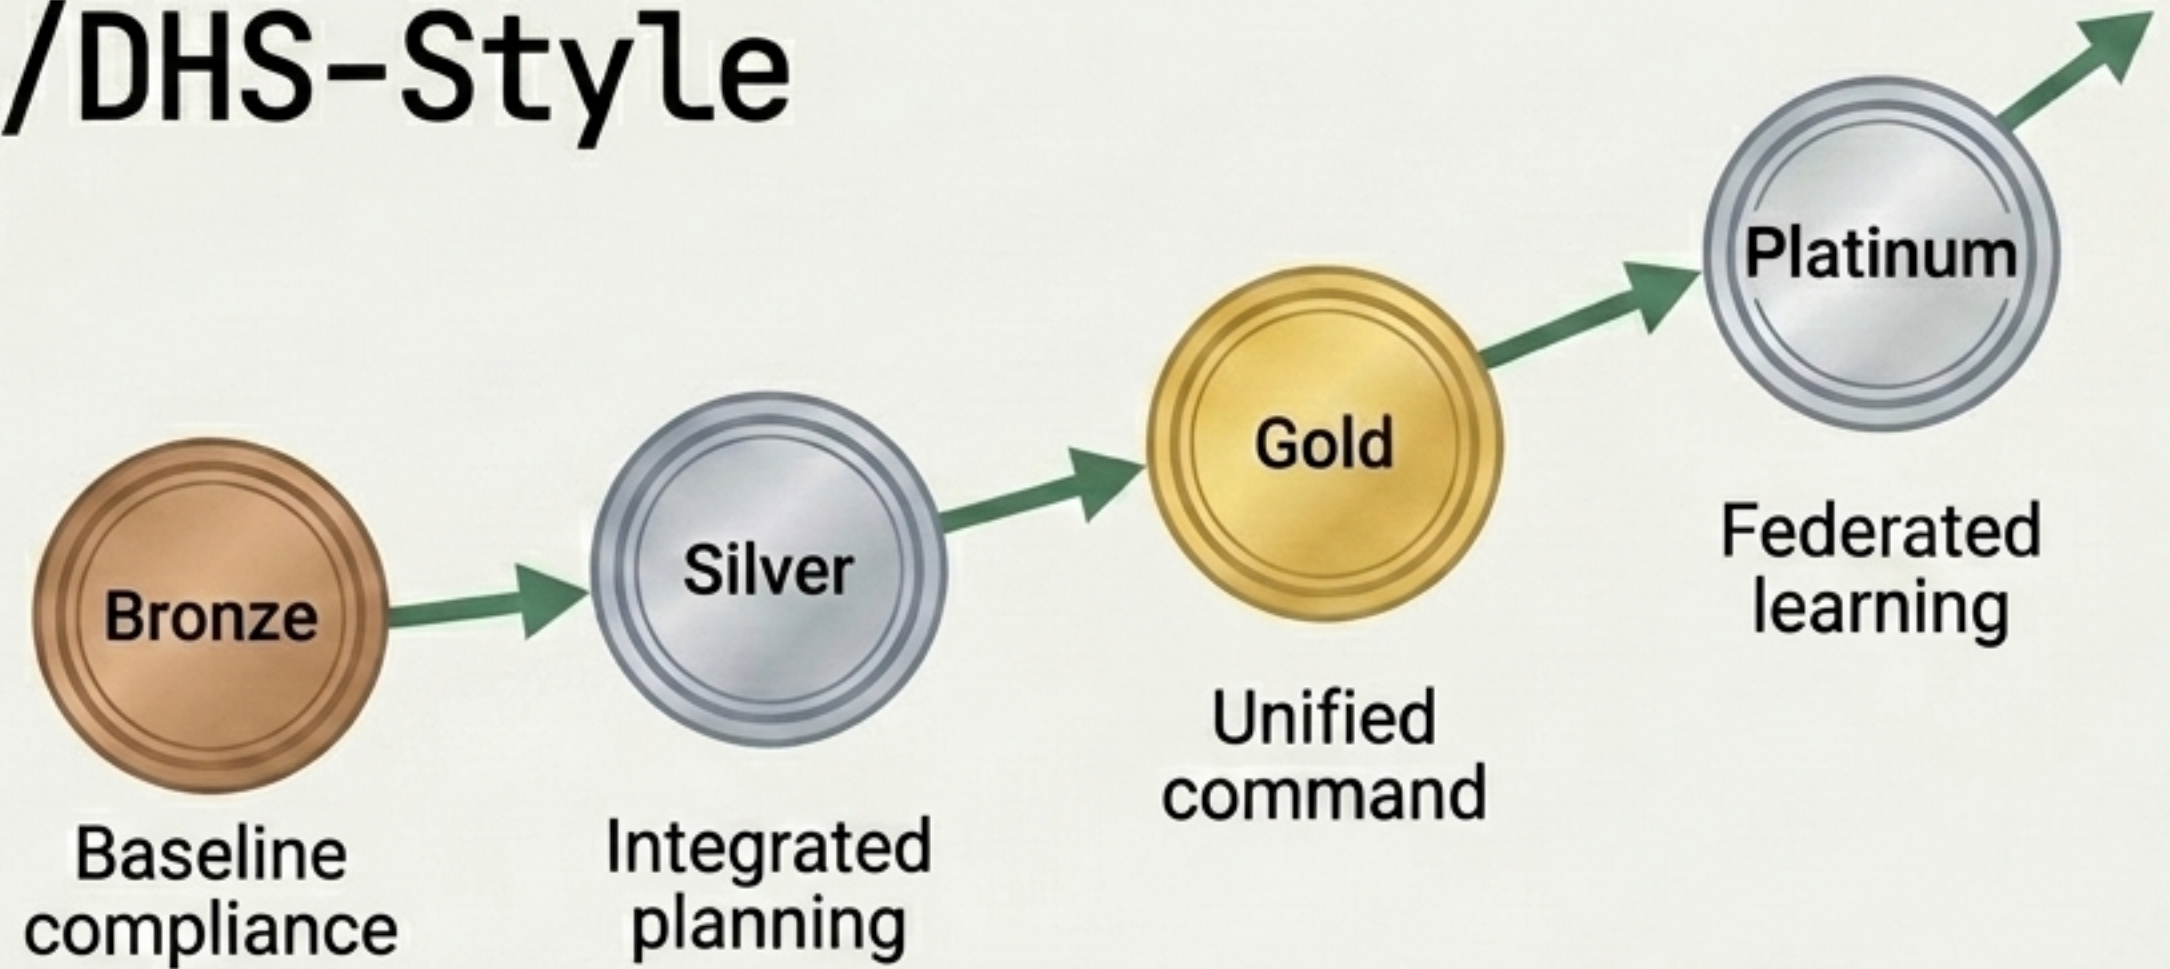

3. Venue Operations Grid

Facilitates real-time facility readiness, crowd analytics, and multi-stakeholder orchestration on the ground.

LEORS: The FEMA/DHS-Style Safety Standard

The industry's first certifiable standard for multi-stakeholder readiness and performance across 8 domains, framing safety as a rigid, insurable regime.

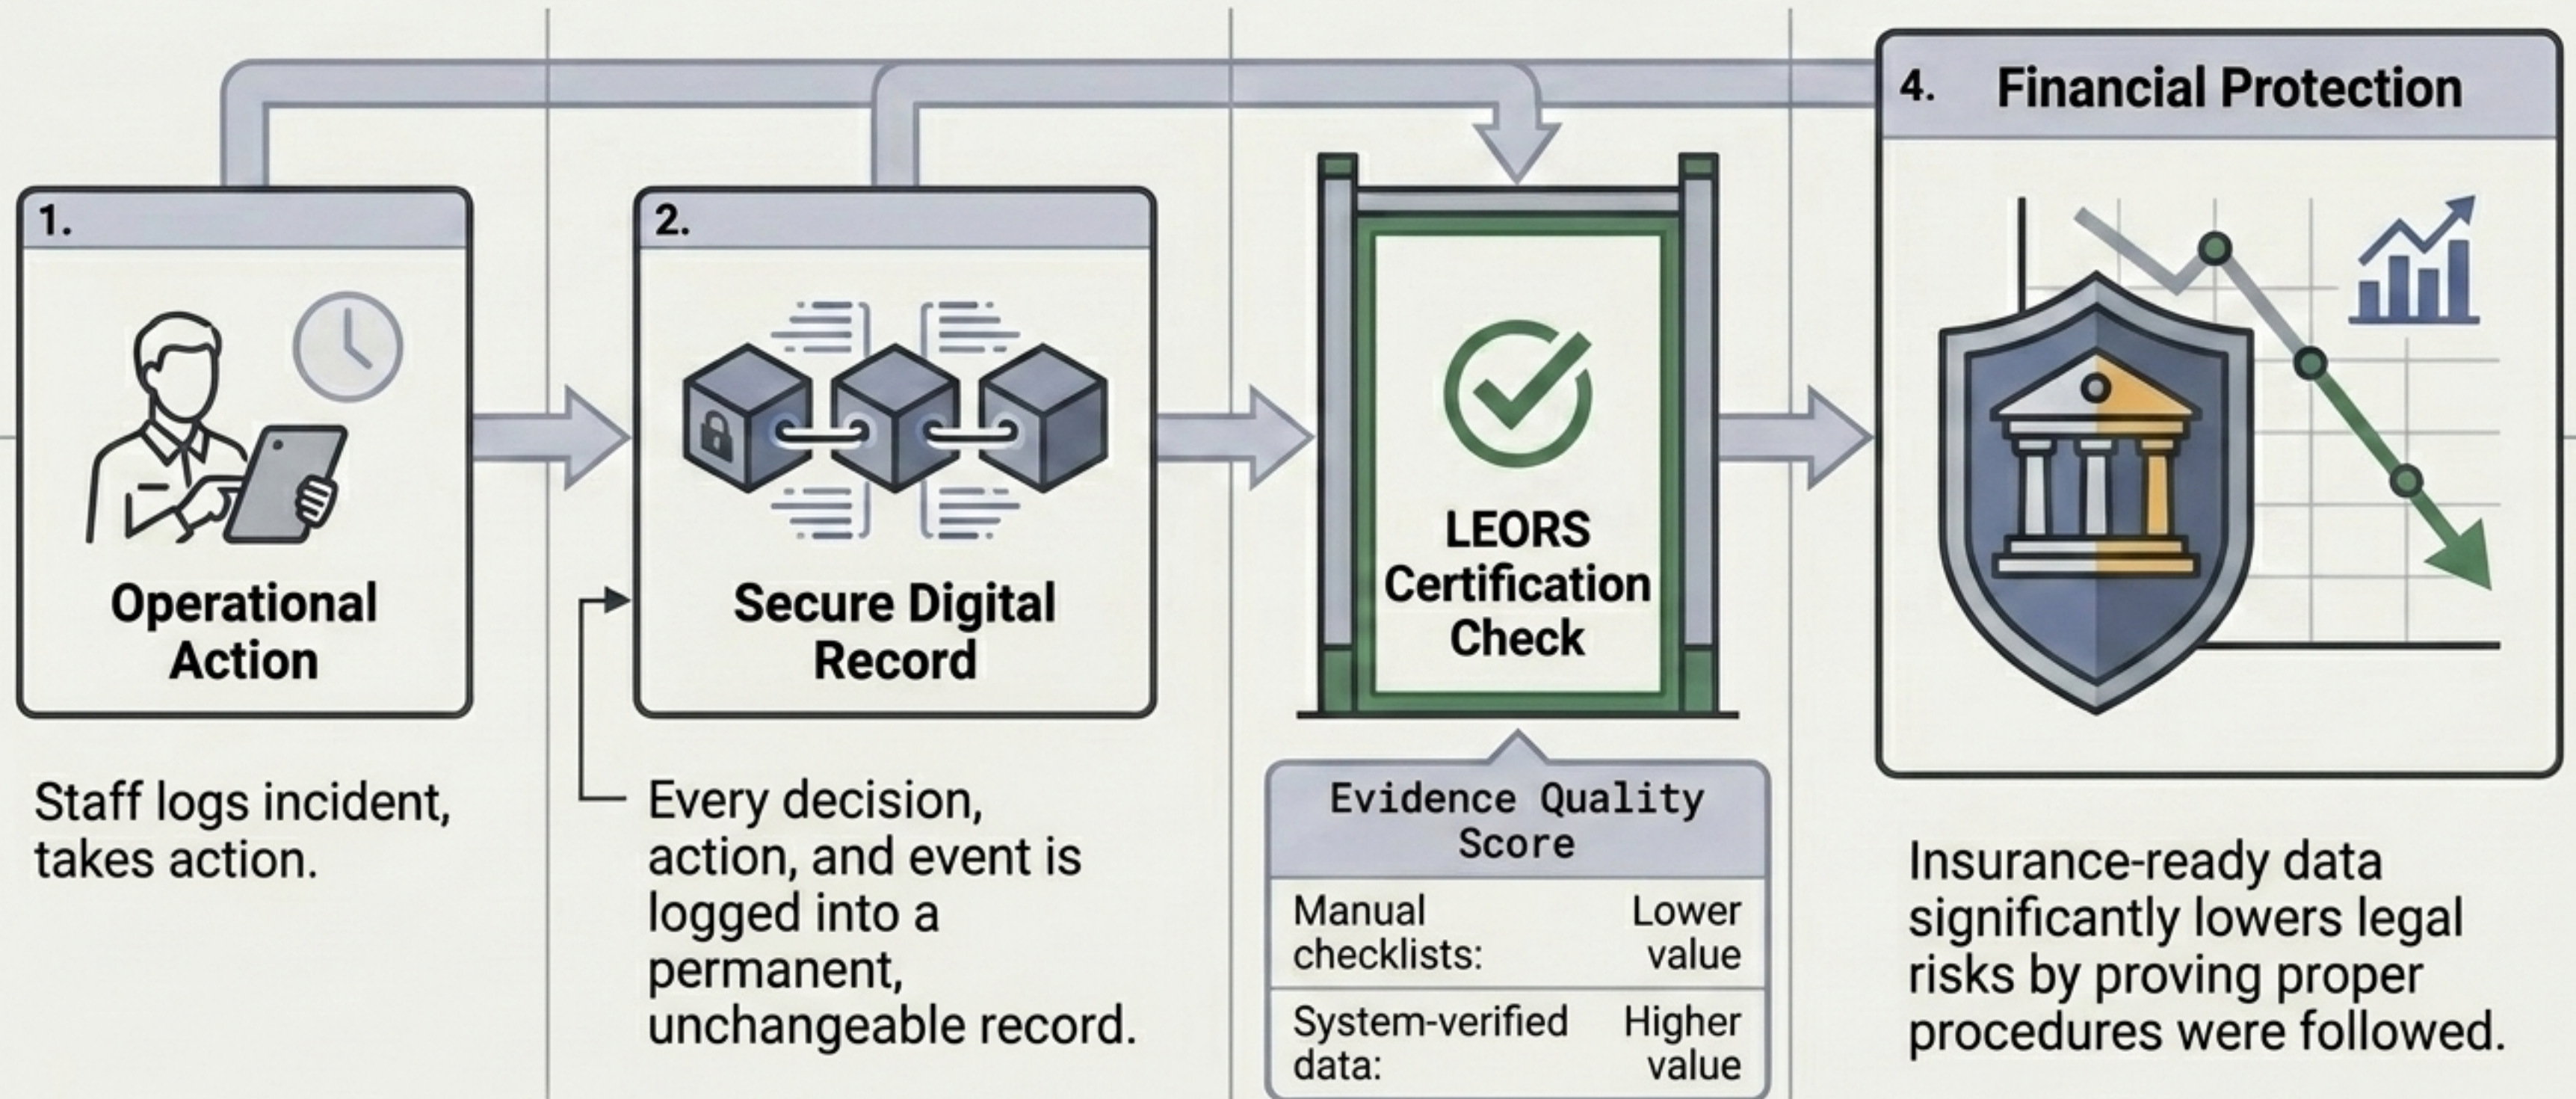

The "No-Fail" Protocol

- Absolute clarity on authority for stop-show decisions.
- Validated medical surge and mass-evacuation capacity.

Turning Daily Operations into Secure Financial Value

Strategic Financial Impact

	Industry Baseline	Sentraais Impact
Litigation Exposure	\$50M - \$280M per incident	70%+ reduction through secure, tamper-proof records
Curfew Penalties	\$10K - \$50K per minute	60% reduction through better planning tools
Insurance Premiums	+15% annual increases	Stable premiums by meeting safety standards
Staff Overtime	+24% increase since 2022	Smarter scheduling reduces unplanned overtime

Bottom Line Target: 3-5x Target ROI in the first year of deployment.
